ENERGY

A Continuing Bibliography

With Indexes

Issue 20

A selection of annotated references to unclassified reports and journal articles that were introduced into the NASA scientific and technical information system and announced from October 1 through December 31, 1978 in

- *Scientific and Technical Aerospace Reports (STAR)*
- *International Aerospace Abstracts (IAA)*

This Supplement is available from the National Technical Information Service (NTIS), Springfield, Virginia 22161, at the price code E07 (\$12.50 domestic, \$25.00 foreign)

INTRODUCTION

This issue of *Energy A Continuing Bibliography with Indexes* (NASA SP-7043(20)) lists 1250 reports, journal articles, and other documents announced between October 1, 1978 and December 31, 1978 in *Scientific and Technical Aerospace Reports (STAR)* or in *International Aerospace Abstracts (IAA)*. The first issue of this continuing bibliography was published in May 1974 and succeeding issues are published quarterly.

The coverage includes regional, national and international energy systems; research and development on fuels and other sources of energy; energy conversion, transport, transmission, distribution and storage, with special emphasis on use of hydrogen and of solar energy. Also included are methods of locating or using new energy resources. Of special interest is energy for heating, lighting, for powering aircraft, surface vehicles, or other machinery.

Each entry in the bibliography consists of a standard bibliographic citation accompanied in most cases by an abstract. The listing of the entries is arranged in two major sections, *IAA Entries* and *STAR Entries* in that order. The citation, and abstracts when available, are reproduced exactly as they appeared originally in *IAA* or *STAR* including the original accession numbers from the respective announcement journals. This procedure, which saves time and money accounts for the slight variation in citation appearances.

Five indexes -- subject, personal author, corporate source, contract number, and report number -- are included. The indexes are of the cumulating type throughout the year, with the fourth quarterly publication containing abstracts for the fourth quarter and index references for the four quarterly publications.

AVAILABILITY OF CITED PUBLICATIONS

IAA ENTRIES (A78-10000 Series)

All publications abstracted in this Section are available from the Technical Information Service, American Institute of Aeronautics and Astronautics, Inc (AIAA), as follows. Paper copies of accessions are available at \$6 00 per document up to a maximum of 20 pages. The charge for each additional page is \$0 25. Microfiche⁽¹⁾ of documents announced in /AA are available at the rate of \$2 50 per microfiche on demand, and at the rate of \$1 10 per microfiche for standing orders for all /AA microfiche. The price for the /AA microfiche by category is available at the rate of \$1 25 per microfiche plus a \$1 00 service charge per category per issue. Microfiche of all the current AIAA Meeting Papers are available on a standing order basis at the rate of \$1 35 per microfiche.

Minimum air-mail postage to foreign countries is \$1 00 and all foreign orders are shipped on payment of pro-forma invoices.

All inquiries and requests should be addressed to AIAA Technical Information Service. Please refer to the accession number when requesting publications.

STAR ENTRIES (N78-10000 Series)

One or more sources from which a document announced in *STAR* is available to the public is ordinarily given on the last line of the citation. The most commonly indicated sources and their acronyms or abbreviations are listed below. If the publication is available from a source other than those listed, the publisher and his address will be displayed on the availability line or in combination with the corporate source line.

Avail NTIS. Sold by the National Technical Information Service. Prices for hard copy (HC) and microfiche (MF) are indicated by a price code followed by the letters HC or MF in the *STAR* citation. Current values for the price codes are given in the tables on page viii.

Documents on microfiche are designated by a pound sign (#) following the accession number. The pound sign is used without regard to the source or quality of the microfiche.

Initially distributed microfiche under the NTIS SRIM (Selected Research in Microfiche) is available at greatly reduced unit prices. For this service and for information concerning subscription to NASA printed reports, consult the NTIS Subscription Section, Springfield, Va 22161.

NOTE ON ORDERING DOCUMENTS When ordering NASA publications (those followed by the * symbol), use the N accession number. NASA patent applications (only the specifications are offered) should be ordered by the US-Patent-Appl-SN number. Non-NASA publications (no asterisk) should be ordered by the AD, PB, or other *report* number shown on the last line of the citation, not by the N accession number. It is also advisable to cite the title and other bibliographic identification.

Avail SOD (or GPO). Sold by the Superintendent of Documents, U S Government Printing Office, in hard copy. The current price and order number are given following the availability line. (NTIS will fill microfiche requests, at the standard \$3 00 price, for those documents identified by a # symbol.)

(1) A microfiche is a transparent sheet of film 105 by 148 mm in size containing as many as 60 to 98 pages of information reduced to micro images (not to exceed 26:1 reduction).

- Avail NASA Public Document Rooms** Documents so indicated may be examined at or purchased from the National Aeronautics and Space Administration, Public Documents Room (Room 126), 600 Independence Ave., S.W., Washington, D.C. 20546, or public document rooms located at each of the NASA research centers, the NASA Space Technology Laboratories, and the NASA Pasadena Office at the Jet Propulsion Laboratory
- Avail DOE Depository Libraries** Organizations in U.S. cities and abroad that maintain collections of Department of Energy reports, usually in microfiche form, are listed in *Energy Research Abstracts*. Services available from the DOE and its depositories are described in a booklet, *DOE Technical Information Center - Its Functions and Services* (TID-4660), which may be obtained without charge from the DOE Technical Information Center
- Avail Univ. Microfilms** Documents so indicated are dissertations selected from *Dissertation Abstracts* and are sold by University Microfilms as xerographic copy (HC) and microfilm. All requests should cite the author and the Order Number as they appear in the citation
- Avail USGS** Originals of many reports from the U.S. Geological Survey, which may contain color illustrations, or otherwise may not have the quality of illustrations preserved in the microfiche or facsimile reproduction, may be examined by the public at the libraries of the USGS field offices whose addresses are listed in this introduction. The libraries may be queried concerning the availability of specific documents and the possible utilization of local copying services, such as color reproduction
- Avail HMSO** Publications of Her Majesty's Stationery Office are sold in the U.S. by Pendragon House, Inc. (PHI), Redwood City, California. The U.S. price (including a service and mailing charge) is given, or a conversion table may be obtained from PHI
- Avail BLL (formerly NLL)** British Library Lending Division, Boston Spa, Wetherby, Yorkshire, England. Photocopies available from this organization at the price shown. (If none is given, inquiry should be addressed to the BLL)
- Avail ZLDI** Sold by the Zentralstelle für Luftfahrt-dokumentation und -Information, Munich, Federal Republic of Germany, at the price shown in deutschmarks (DM)
- Avail Issuing Activity, or Corporate Author, or no indication of availability** Inquiries as to the availability of these documents should be addressed to the organization shown in the citation as the corporate author of the document
- Avail U.S. Patent and Trademark Office** Sold by Commissioner of Patents and Trademarks, U.S. Patent and Trademark Office, at the standard price of 50 cents each, postage free
- Other availabilities** If the publication is available from a source other than the above, the publisher and his address will be displayed entirely on the availability line or in combination with the corporate author line

GENERAL AVAILABILITY

All publications abstracted in this bibliography are available to the public through the sources as indicated in the *STAR Entries* and *IAA Entries* sections. It is suggested that the bibliography user contact his own library or other local libraries prior to ordering any publication inasmuch as many of the documents have been widely distributed by the issuing agencies, especially NASA. A listing of public collections of NASA documents is included on the inside back cover.

SUBSCRIPTION AVAILABILITY

This publication is available on subscription from the National Technical Information Service (NTIS). The annual subscription rate for the quarterly supplements is \$40.00 domestic, \$80.00 foreign. All questions relating to the subscriptions should be referred to NTIS, Attn: Subscriptions, 5285 Port Royal Road, Springfield Virginia 22161.

48. Geothermal energy. Part 3: Technology and general studies, volume 3. Citations from the NTIS data base p0625 N78-33883
49. Geothermal energy, volume 3. Citations from the engineering index data base p0626 N78-33884

JANUARY 1979

IAA ENTRIES

A78-43325 # Detection of heat loss from buildings through aerial thermography - Applications and methodology G R Lawrence (Ontario Centre for Remote Sensing, Toronto, Canada) In *Canadian Symposium on Remote Sensing, 4th, Quebec, Canada, May 16-18, 1977, Proceedings* Ottawa, Canadian Aeronautics and Space Institute, 1977, p 220-226 5 refs

The article discusses the application of aerial thermography for the identification of building heat losses. The following necessary conditions are identified: (1) the overflight should begin 3 hours after sunset or 1 hour after the expected nighttime low, (2) daytime temperature should be about 5 C and nighttime temperature should be about 3 C, (3) the air should be relatively calm, (4) the sky should be relatively clear, (5) there should not be a temperature inversion between the ground and the aircraft, (6) the dew point should be at least 3 C, and (7) the aircraft should be flown at an altitude in the 360-540 m range. Building heat loss is related to the apparent roof-top temperature sensed by the scanner. This temperature is translated into grey tones on the film. Information gathered by field checking has indicated that the technique yields reasonably accurate measurements of building heat loss. S C S

A78-43357 * # Planning a new era in air transport efficiency J J Kramer (NASA, Office of Aeronautics and Space Technology, Washington, D.C.) *Astronautics and Aeronautics*, vol 16, July-Aug 1978, p 26-28

The current status of the NASA Aircraft Energy Efficiency (ACEE) program is briefly reviewed with reference to CTOL aircraft. Attention is given to four basic technologies: turboprop, advanced aerodynamics and active controls, laminar flow control, and composites. B J

A78-43358 * # CTOL concepts and technology development D W Conner (NASA, Langley Research Center, Systems Analysis Branch, Hampton, Va.) *Astronautics and Aeronautics*, vol 16, July-Aug 1978, p 29-37 11 refs.

Various developments in the Aircraft Energy Efficiency (ACEE) program are discussed. Terminal-area operations are considered with emphasis on the Terminal Configured Vehicle program. Consideration is also given to aircraft systems studies and economics (including noise reduction programs), coal-derived fuels for aviation systems (including LH2-fueled aircraft), and transport-aircraft concepts (including laminar flow control). B J

A78-43359 * # Airframes and aerodynamics R W Leonard (NASA, Langley Research Center, Hampton, Va.) *Astronautics and Aeronautics*, vol 16, July-Aug 1978, p 38-46

The first part of the paper discusses the Energy Efficient Transport program of the Aircraft Energy Efficiency (ACEE) program, giving attention to the development of active aerodynamics

and active controls. The second part of the paper deals with two other portions of the ACEE program: Composite Primary Structures and Laminar Flow Control. B J

A78-43360 * # Propulsion D L Nored (NASA, Lewis Research Center, Energy Conservative Engines Office, Cleveland, Ohio) *Astronautics and Aeronautics*, vol 16, July-Aug 1978, p 47-54, 119 14 refs

NASA aims at developing propulsion technology to reduce the fuel consumption of present engines by 5%, that of new engines of the late 1980s by at least 12%, and that of an advanced early 1990s turboprop by an additional 15%. This paper reviews three separate NASA programs which take up these aims. They are, respectively, Engine Component Improvement, Energy Efficient Engine, and Advanced Turboprops. B J

A78-43388 Solar energy conversion using semiconducting photoanodes W A Gerrard and L M Rouse (Materials and Energy Research Centre, Teheran, Iran) (*American Vacuum Society and Institute of Electrical and Electronics Engineers, Symposium on Electron, Ion, and Photon Beam Technology, 14th, Palo Alto, Calif., May 25-27, 1977*) *Journal of Vacuum Science and Technology*, vol 15, May-June 1978, p 1155-1165 133 refs

The application of photoelectrochemical devices for solar energy conversion is considered. Problems associated with performance degradation when illuminated in an aqueous environment have been overcome by the addition of stabilizing redox ions to the electrolyte. In such devices conversion efficiency is a function of the Schottky barrier at the interface, the semiconductor bandgap and affinity, and the electrolyte redox level. Conversion efficiencies of 7-9% have been achieved. S C S

A78-43402 The reduction of nitrogen oxide emission in oil-burning installations (Stickoxid-Emissionsverringierung bei Ölfeuerungen). M Buzina, E Petro (Gebr. Sulzer AG, Winterthur, Switzerland), and H J Janssen (Servico AG, Langnau, Switzerland) *Brennstoff-Wärme-Kraft*, vol 30, June 1978, p 255-257. In German

A description is presented of an investigation which was conducted in connection with the further development of an industrial burner. Heavy and very light fuel oil fractions were used in the investigation. The burner design with respect to air and flue gas supply makes a variation of the operational conditions possible. Changes in the operational conditions were found to have a pronounced effect on the formation of nitrogen oxide. Reactions occurring under four different sets of operational conditions were investigated. It was found that the process of air and flue gas mixing, the injection location, and the entrance velocity of the gaseous mixture in the combustion chamber are important factors which determine the characteristics of the combustion process. The conditions for a minimization of nitrogen oxide formation are discussed. G.R

A78-43403 Coal processing technology Volume 3 New York, American Institute of Chemical Engineers, 1977 200 p \$20

Clean fuels from coal are considered along with uses for fluidized bed coal combustion, coal-fired MHD power generation, the environmental influence of coal liquefaction, presulfiding coal liquid hydrodesulfurization catalysts, removing micron size particles from coal liquids, the evaluation of coal carbonization processes, alternatives to stack-gas scrubbing, effluents from Synthene gasification of lignite, pressurized feed for coal gasification, purification processes for coal gasification, and experimental studies of gas-solids transport. Attention is also given to high-rate coal gasification, the influence of environment on coal conversion sites, jet fuels from synthetic crudes, gas turbine engine fuel from synthetic crude, an evaluation of coal-derived JP-5 fuels, environmental aspects of coal gasification, coal-based ammonia plant operation, and design concepts for a coal hydrocarbonization plant G R

A78-43404 Clean fuels from coal E P Stambaugh, J F Miller, S S Tam, S P Chauhan, H F Feldmann, H E Carlton, H Nack, and J H Oxley (Battelle Memorial Institute, Columbus, Ohio) In Coal processing technology Volume 3 New York, American Institute of Chemical Engineers, 1977, p 1-4

A description is presented of a new coal desulfurization process which is based on heating a water coal slurry and a leaching agent at moderate temperatures and pressures. The technology involved promises to be an excellent process for reducing the sulfur level of high-sulfur coals to meet Federal sulfur emission standards. The reported process has successfully extracted up to 99% of the pyritic sulfur and up to 70% of the organic sulfur in both batch laboratory experiments and small-scale pre-pilot plant continuous operation to produce a clean solid fuel for electric utilities, industrial boilers, schools, and any facility using coal as the source of energy. The primary end products of the process are clean solid fuel and elemental sulfur, which can be marketed or easily stored. Sodium hydroxide and calcium hydroxide have been identified as the most promising leaching agents G R

A78-43405 Uses for fluidized bed coal combustion. A P Fraas (Oak Ridge National Laboratory, Oak Ridge, Tenn.) In Coal processing technology Volume 3 New York, American Institute of Chemical Engineers, 1977, p 5-11 18 refs

It is pointed out that burning coal in a fluidized bed offers an intriguing means of obtaining electricity as well as high-temperature process heat from many types of coal fuels, and with no need for costly air pollution control systems in the stack emission. Coal fuels which can be used employ lignite and high sulfur bituminous coal. The thermodynamic cycles that appear most attractive are a closed cycle gas turbine and a cesium- or potassium-steam binary vapor cycle. The former has the advantage that it is more conventional whereas the latter gives a higher efficiency for the production of electricity. The potassium (or cesium) cycle has the additional advantage that it makes clean process heat available at any given constant temperature up to 1540 F G R

A78-43406 Coal-fired MHD power generation A J Kumnick (Montana State University, Bozeman, Mont.) In Coal processing technology Volume 3 New York, American Institute of Chemical Engineers, 1977, p 12-15 12 refs

The first MHD generator, which became a laboratory reality in 1959, produced 11.5 kW of electric power. The interest in MHD generators is related to their potential of converting fossil fuel (particularly coal) to electricity at a higher efficiency than existing technologies. In an MHD generator of the considered type, the metal armatures of a conventional turbogenerator are replaced by a very hot conducting gas moving at a high velocity perpendicular to a magnetic field. In the operation of an open cycle coal-fired MHD generator, the gas is combustion gas which is obtained by burning pulverized coal with preheated air. The electrical conductivity of the gas is increased by the addition of a 'seed' material such as

potassium. Critical problem areas regarding the development of a commercially feasible MHD system are examined G R

A78-43407 The environmental influence of coal liquefaction E M Magee, C E Jahng, and C D Kalfaldelis (Exxon Research and Engineering Co., Linden, NJ.) In Coal processing technology Volume 3 New York, American Institute of Chemical Engineers, 1977, p 16-22 20 refs

The coal-processing plants required to replace a significant fraction of the U.S. oil consumption by synthetic liquids derived from coal could potentially represent a formidable source of environmental pollution. An investigation was in this connection conducted regarding the environmental influence of coal liquefaction processes. Effects on the environment are related to the natural resources consumed and the effluents emitted. Water is required for the processing operations. The requirements for water are a very critical factor in many western areas where coal is abundant but water is scarce. The principal emissions of concern are huge quantities of gaseous, liquid, and solid effluents, as well as waste heat. The composition of stack gases from the processes depends on the fuel which is used G R

A78-43408 Presulfiding coal liquid hydrodesulfurization catalysts M M Ahmed and B L Crynes (Oklahoma State University, Stillwater, Okla.) In Coal processing technology Volume 3 New York, American Institute of Chemical Engineers, 1977, p 23-27 11 refs

Some coal liquefaction processes under consideration may require secondary hydrotreatment with hydrodesulfurization (HDS) as an important step in upgrading the coal-derived liquids. A specialized program developed for HDS is discussed. A trickle bed reactor is used in the conducted experiments. The significance of the obtained results is considered. It is found that the total amount of H₂S supplied during catalyst presulfiding has an effect on the catalyst activity. A relatively small amount of H₂S results in a lower activity of the catalyst. The activity of the catalyst decreases also when the sulfided catalyst is treated with pure hydrogen G R

A78-43409 Evaluation of coal carbonization processes J M Holmes, H D Cochran, Jr., M S Edwards, D S Joy, and P M. Lantz (Oak Ridge National Laboratory, Oak Ridge, Tenn.) In Coal processing technology Volume 3 New York, American Institute of Chemical Engineers, 1977, p 40-46 8 refs

The reported survey shows that a number of processes for the carbonization and hydrocarbonization of bituminous coals are available. However, only the development of the Lurgi-Ruhrgas process has currently reached the commercial stage. The others are in various stages of development, including the Coalcon process, which is currently being scaled for a use in a demonstration plant. A wide range of yields can be obtained by these processes which are primarily dependent upon coal rank and process operating conditions. Agglomeration of the coal during carbonization can be prevented by a variety of methods. An attractive approach appears to be the bed recirculation method. Desulfurization of the liquid and char products can be achieved by additional treatment with hydrogen G R

A78-43410 Alternatives to stack-gas scrubbing J M Evans (Enviro Control, Inc., Rockville, Md.) In Coal processing technology Volume 3 New York, American Institute of Chemical Engineers, 1977, p 47-52 25 refs

Physical coal beneficiation processes considered include a coal-agglomeration process, a multistream coal cleaning system, two-stage froth flotation, electrophoretic separation, and magnetic separation. Chemical processes investigated are related to a hydrothermal process, an oxygen leaching process, 'sulfur oxidation', chemical comminution, and chemical cleaning. A description is presented of the approaches used to obtain accurate specific gravity control in a multistream technique. Physical and chemical methods employed to reduce particle size are discussed along with the

concepts involved in chemical leaching. The important parameters of chemical coal cleaning processes are presented in a table G R

A78-43411 Effluents from Synthane gasification of lignite. M J Massey (Carnegie-Mellon University, Pittsburgh, Pa.), D V. Nakles, A J Forney, and W. P Haynes (U.S. Department of Energy, Pittsburgh, Pa.) In Coal processing technology Volume 3. New York, American Institute of Chemical Engineers, 1977, p 53-59 8 refs.

An extensive experimental program was initiated to study quantitatively the nature of effluent production and the various gasifier process variables which affect it. The investigation included studies of the rates of production of various gasifier effluents as a function of time from gasifier startup to shutdown and the effects of changes in selected process variables on the rate of production of various effluents. The associated effects of changes in these variables on yields of total product gas and equivalent methane were also examined along with the impacts of changes in selected process variables on the composition and physical properties of char and tar produced. Attention is given to the equipment arrangement for gasification trials, the effect of coal injection geometry, and the mechanisms responsible for the observed results G,R

A78-43412 Pressurized feed for coal gasification A H Furman (General Electric Co., Schenectady, N.Y.) In Coal processing technology Volume 3. New York, American Institute of Chemical Engineers, 1977, p 60-65 Research sponsored by the Electric Power Research Institute

A description is presented of a continuous 'cold' coal extrusion process to compact and feed coal fines directly into a pressurized gasifier. This process is to make it possible to utilize coal fines which cannot be processed in conventional fixed-bed gasifiers. Such a utilization of fines is economically important because mine coal can contain as much as 30%-40% fines. In the described process, screened coal fines are mixed with a tar binder and fed into the hopper of the extruder. The mix is conveyed down the barrel by a screw and compressed into a solid continuous rod of extrudate in the die area. A two-inch extruder was employed in the first scale-up of the process. It was found that the screw component was subjected to much wear. A screw/ram device was designed in an effort to overcome these difficulties. Other problems which had to be solved were related to pressure maintenance and variations in the characteristics of the coal G R

A78-43413 Purification processes for coal gasification. D K Fleming and H S Primack (Institute of Gas Technology, Chicago, Ill.) In Coal processing technology Volume 3 (A78-43403 19-44) New York, American Institute of Chemical Engineers, 1977, p 66-78 47 refs

A review is conducted of purification processes for gas streams generated in high-Btu coal gasification processes. Particular attention is given to systems for sulfur removal and recovery from the raw product gas and for cleaning the Claus plant tail gas. Certain problems are created by the variations in the coal properties. Therefore, the coal gasification facility has a feedstock that cannot be adequately characterized, but is known to vary widely. The group of systems that remove sulfurous compounds and carbon dioxide from gases are generically called acid-gas removal processes. The selection of an acid-gas removal system will depend, in part, upon the process chosen for treating the off-gas for sulfur recovery. In general, it is economically preferable to process as much of the gas through a Claus process as possible. Attention is given to selectivity in acid-gas removal, the use of alkanolamines, the employment of physical solvents, and details regarding the Claus process G R

A78-43414 High rate coal gasification R L Coates (Eyring Research Institute, Provo, Utah) In Coal processing technology Volume 3. New York, American Institute of Chemical Engineers, 1977, p 89-94 Contract No E(49-18)-1548

Studies of pressurized gasification of coal in experimental entrained flow gasifiers conducted between 1953 and 1962 by the U.S. Bureau of Mines has demonstrated that the reaction of pulverized bituminous coal with oxygen and steam could be efficiently carried out at gasifier coal throughput rates as high as 500 lb/hr/cu ft of reaction-zone volume. This rate is more than an order of magnitude greater than the volumetric throughput rates of existing commercial stirred-bed gasifiers. A description is presented of an experimental gasifier similar to the Bureau of Mines design, but with provisions for recovering sensible heat from the product stream. Recent results are also reported in which efficient gasification has been achieved at throughput rates of 1000 lb/hr/ft. The pulverized coal, entrained in a recycled stream of product gas, and a mixture of preheated oxygen and superheated steam are fed to the top of the gasifier. Attention is given to a design employed to prevent slag solidification, results obtained with Utah bituminous coal, and a comparison with prior data G R

A78-43415 * Jet fuels from synthetic crudes A C Antoine (NASA, Lewis Research Center, Cleveland, Ohio) and J P Gallagher (A*antic Richfield Co., Harvey, Ill.) In Coal processing technology Volume 3. New York, American Institute of Chemical Engineers, 1977, p 107-114 Contract No NAS3-19747

An investigation was conducted to determine the technical problems in the conversion of a significant portion of a barrel of either a shale oil or a coal synthetic crude oil into a suitable aviation turbine fuel. Three syncrudes were used, one from shale and two from coal, chosen as representative of typical crudes from future commercial production. The material was used to produce jet fuels of varying specifications by distillation, hydrotreating, and hydrocracking. Attention is given to process requirements, hydrotreating process conditions, the methods used to analyze the final products, the conditions for shale oil processing, and the coal liquid processing conditions. The results of the investigation show that jet fuels of defined specifications can be made from oil shale and coal syncrudes using readily available commercial processes G R

A78-43416 Gas turbine engine fuel from synthetic crude F S Eisen and J D Tice (Suntech, Inc., Marcus Hook, Pa.) In Coal processing technology Volume 3. New York, American Institute of Chemical Engineers, 1977, p 115-121 7 refs

In an effort to expand the domestic supply base for liquid fuel, a program was initiated to evaluate the suitability of synthetic fuels (from coal, oil shale, and tar sands) for DOD needs. In this connection a contract was awarded to an American company to produce jet fuel from coal-derived synthetic crude oil. The objective was to provide JP-5 type jet fuel samples for testing. In the first phase of the project four 10-gal lots of jet fuel were prepared from coal syncrude. During the second phase 250 gal were produced of one of the fuels. The investigation shows that gas turbine engine fuels having 2-25 vol % aromatics, which meet most current JP-5 specifications, can be produced from the coal syncrudes tested. Severe hydrogenation conditions are required to reduce the aromatic content of the coal syncrude kerosene fraction to 20-25 vol % in one stage. Meeting the current JP-5 smoke point specification will be difficult for coal-derived fuels with aromatics greater than 20 vol % or so G R

A78-43417 Evaluation of coal-derived JP-5 fuels C J Nowack, J Solash, and R J Delfosse (U.S. Naval Air Propulsion Test Center, Trenton, N.J.) In Coal processing technology Volume 3. New York, American Institute of Chemical Engineers, 1977, p 122-126 5 refs

On the basis of an evaluation of the data obtained in the pilot plant experiment of an American company, it is concluded that it will be difficult to convert coal syncrudes from the Char Oil Energy Development process into a jet fuel having all the properties of the present MIL-T-5624K specification for grade JP-5 fuel. Those properties which will not be acceptable for a wide boiling range fuel; having an end point of 575 F, are specific gravity, viscosity, and smoke point on a 25% aromatic level. Development work on refining

coal syncrudes should be conducted to improve process variables. This work should also include the development of catalysts that are resistant to those compounds in coal syncrudes which are responsible for deactivation. Both high and low aromatic fuels derived from Utah and Western Kentucky coals had acceptable storage and thermal oxidation stability. G R

A78-43418 Environmental aspects of coal gasification. C E Jahnig and R R Bertrand (Exxon Research and Engineering Co., Linden, N.J.) In Coal processing technology Volume 3. New York, American Institute of Chemical Engineers, 1977, p 127-132. 17 refs.

It would take about 80 large plants for converting coal to synthetic natural gas to provide clean fuel equivalent to 20% of the U.S. current oil consumption. Required new supplies of coal will be over 300 million ton/yr compared to current production of about 600 million ton/yr. Detailed evaluations have been conducted concerning the impact of this new coal conversion industry on the environment. Specific areas of concern are related to solids disposal, emissions to the air, water effluents, and trace metals. The area of trace elements warrants special mention because a large number of toxic trace elements have considerable volatility in the gasifier and become concentrated in the raw gas clean up system. Specific methods will have to be developed for their recovery or proper disposal. Approaches for environmental controls are discussed, taking into account cooling and scrubbing, water clean up, acid gas removal, and solids disposal. G R

A78-43419 The Exxon donor solvent process. L E Furlong, E Effron, L W Vernon, and E L Wilson (Exxon Research and Engineering Co., Baytown, Tex.) In Coal processing technology Volume 3. New York, American Institute of Chemical Engineers, 1977, p 145-151. 6 refs.

In the present paper, Exxon's research work on coal liquefaction is reviewed, and the currently envisioned commercial EDS process is outlined. Particular attention is given to the donor solvent, the currently operating 1-ton/day pilot plant, and the nature of the liquid products. The principal steps of the EDS process directed toward production of naphtha blending components and low-sulfur fuel oil are discussed, and the basic requirements and specifications for a 250-ton/day pilot unit are established. V P

A78-43420 Fluid bed processing of agglomerating coals. J Yerushalmi (New York, City University, New York, N.Y.) In Coal processing technology Volume 3. New York, American Institute of Chemical Engineers, 1977, p 156-165. 36 refs.

Fluid bed technologies for processing coal may benefit substantially if a caking coal could be fed directly to the bed without pretreatment. In the present paper, a number of techniques that might be employed to process a caking coal in fluidized beds are discussed, and a technical basis for each of the techniques is developed. Particular attention is given to means of achieving effective dispersal of raw particles of coal in the dry char that comprises the bed. V P

A78-43421 A fluidized-bed ash-agglomeration gasifier. W A Sandstrom, A G Rehmat, and W G Bair (Institute of Gas Technology, Chicago, Ill.) In Coal processing technology Volume 3. New York, American Institute of Chemical Engineers, 1977, p 180-186. Research sponsored by the American Gas Association and ERDA.

The test program described has provided conclusive evidence that high-ash-content agglomerates can be selectively removed on a steady-state long-term basis from a dense-phase fluidized bed of high carbon content. Carbon utilization is further improved by fines recycle, so that carbon gasification efficiencies over 95% are obtainable. In tests at near atmospheric pressure, it proved possible to obtain agglomerates of 65 to 95 percent ash content from a dense-phase fluidized bed with an average ash content between 22 and 28 percent. Higher bed temperatures were found to produce

higher ash-content agglomerates for a given feed particle size range. The average feed particle size appears to affect the bed temperature at which agglomerates begin to form. The required bed agglomerating temperature increases with decreasing particle size. Ferrous aluminum silicate eutectic was found to promote the formation of ash agglomerates. V P

A78-43422 The ADL extractive coking process. S A Reber, R M Nadkarni, R W Hyde, A H Schutte, and R P Stickles (Arthur D Little, Inc., Cambridge, Mass.) In Coal processing technology Volume 3. New York, American Institute of Chemical Engineers, 1977, p 187-193. 15 refs.

Coal liquefaction processes are considered and a description is presented of an extractive coking coal liquefaction process, called the ADL process. The process involves the use of a hydrogen-donor solvent under mild conditions to achieve the liquefaction and the use of cracking and coking to separate the product as an overhead vapor from the coal ash and the heavy portion of the coal extract. Pittsburgh seam coal is ground to 80% minus-200-mesh and dried. Coal is crushed and ground, then added to the coke drum along with mildly hydrogenated recycled solvent whose boiling range is approximately from 450-700 F. The coal and solvent react in the drum at about 750 F. The yield structure for the ADL process depends heavily upon process conditions, in particular, upon the coking pressure. Attention is given to process development unit and bench-scale data, a preliminary economic analysis, and the advantages of the ADL process over other processes. G R

A78-43492 # Operation of an electrohydrodynamic heat pipe against gravity. (O rabote elektrogidrodinamicheskoi teplovoi trubki protiv sil tiazhesti.) V D Shkilev. *Akademiia Nauk Moldavskoi SSR, Izvestiia, Seriya Fiziko-Tekhnicheskikh i Matematicheskikh Nauk*, no 1, 1978, p 89-91. 7 refs. In Russian.

The paper describes an experimental study of the possibility of achieving high efficiency heat transfer with an EHD heat pipe, with a high-voltage electrode situated only above the evaporation zone (an area of 20 sq cm). The working fluid was Freon-113, refrigerator temperature was maintained at about 16 C during the experiment. Consideration is given to the dependence of mean temperature of the evaporator on the specific heat flux and on the heat power of the pipe, the temperature profile along the pipe is presented. It is shown that the use of EHD effects is an efficient way to improve the performance of heat pipes that operate against gravity. B J

A78-43504 * # Design approaches to more energy efficient engines. N T. Saunders, R S Colladay, and L E Macioce (NASA, Lewis Research Center, Cleveland, Ohio). *American Institute of Aeronautics and Astronautics and Society of Automotive Engineers, Joint Propulsion Conference, 14th, Las Vegas, Nev., July 25-27, 1978, AIAA Paper 78-931*. 10 p. 5 refs.

In 1976 NASA initiated the Aircraft Energy Efficiency (ACEE) Program to assist in the development of technology for more fuel-efficient aircraft for commercial airline use. The Energy Efficient Engine (EEE) Project of the ACEE program is intended to lay the advanced-technology foundation for a new generation of turbofan engines. This project, planned as a seven-year cooperative government-industry effort, is aimed at developing and demonstrating advanced component and systems technologies for engines that could be introduced into airline service by the late 1980s or early 1990s. In addition to fuel savings, new engines must offer potential for being economically attractive to the airline users and environmentally acceptable. A description is presented of conceptual energy-efficient engine designs which offer potential for achieving all of the goals established for the EEE Project. G R

A78-43505 * # General aviation internal combustion engine research programs at NASA-Lewis Research Center. E A Willis (NASA, Lewis Research Center, Cleveland, Ohio). *American Institute of Aeronautics and Astronautics and Society of Automotive Engineers, Joint Propulsion Conference, 14th, Las Vegas, Nev., July 25-27, 1978, AIAA Paper 78-932*. 15 p. 17 refs.

An update is presented of non-turbine general aviation engine programs underway at the NASA-Lewis Research Center in Cleveland, Ohio. The program encompasses conventional, lightweight diesel and rotary engines. Its three major thrusts are (a) reduced SFC's, (b) improved fuels tolerance, and (c) reducing emissions. Current and planned future programs in such areas as lean operation, improved fuel management, advanced cooling techniques and advanced engine concepts, are described. These are expected to lay the technology base, by the mid to late 1980's, for engines whose life cycle fuel costs are 30 to 50% lower than today's conventional engines. (Author)

A78-43530 # An overview of the Satellite Power System - Transportation system. G M Hanley and R P Bergeron (Rockwell International Corp., Space Div., Seal Beach, Calif.) *American Institute of Aeronautics and Astronautics and Society of Automotive Engineers, Joint Propulsion Conference, 14th, Las Vegas, Nev., July 25-27, 1978, AIAA Paper 78-975* 11 p 6 refs

A key element in the overall feasibility of the Satellite Power System (SPS) is the transportation concept either available or projected to be available in the time being considered. Since transportation costs contribute significantly to the total SPS life cycle cost, methods of reducing transportation cost or simplifying transportation operations greatly enhance the acceptance of the SPS concept. Major elements of the SPS transportation system consist of heavy lift launch vehicle (HLLV), Space Shuttle, cargo and personnel orbit transfer vehicles (COTV and POTV), and on-orbit mobility system (OOTV). A major driver in transportation system selection is the COTV concept used for transfer from low earth orbit (LEO) to geosynchronous equatorial orbit (GEO). Depending on COTV concept selection, two of every three launch vehicle flights to LEO may be required for OTV propellant resupply. Trade studies were conducted on SPS construction site (LEO or GEO) and COTV concepts (chemical, nuclear, and electric self powered or dedicated). A preferred system concept was selected on the basis of cost, operational complexity, and environmental considerations. (Author)

A78-43603 # Parameter optimization for engine control systems. W R Sertz (Bendix Research Laboratories, Southfield, Mich.) and S J Citron (Purdue University, West Lafayette, Ind.) *American Institute of Aeronautics and Astronautics and Society of Automotive Engineers, Joint Propulsion Conference, 14th, Las Vegas, Nev., July 25-27, 1978, AIAA Paper 78-1105* 8 p 11 refs

This paper describes the steps followed in optimizing the design of an automotive engine control system. Adjustment of design parameters allows the control to be adapted to a particular engine, but the complexity of system interactions may limit the designer's ability to achieve optimum performance by intuitive feel alone. The system may be represented in the design process by an analytical model, a computer simulation, or indeed may be the actual engine hardware. Three techniques of parameter optimization are described, two of which have intuitive justification. The design approach is applied to the calibration of an electronic fuel injection and ignition control system. (Author)

A78-43613 # Study of solar energy systems for warm water production with natural circulation (Studie van zonneenergiesystemen voor warmwaterproductie met natuurlijke circulatie). C Van Geit and H Vasseur. Leuven, Katholieke Universiteit, Fakulteit der Toegepaste Wetenschappen, Burgerlijk Werktuigkundig Ingenieur Dissertation, 1977 150 p 22 refs In Dutch

The performance of a solar energy system for household warm water, in which the solar energy not only heats the water but is also responsible for the flow of the water, is analyzed with atmospheric conditions taken into account. First a theoretical study of the thermal losses of a flat-plate collector is carried out. These results are compared with some experimental data. A model of a complete system is developed, that permits one to calculate the temperature variation in the storage vat as a function of time. This model gives accurate results if the solar radiation varies in a regular manner. FORTRAN computer programs for all calculations are given. P T H

A78-43615 # Design of a measurement facility for determining the losses of a solar collector under standard conditions (Ontwerp van een meetopstelling voor het bepalen van de verliezen van een zonnepaneel onder standaardvoorwaarden). J Kegels and J Tiebout. Leuven, Katholieke Universiteit, Fakulteit der Toegepaste Wetenschappen, Burgerlijk Elektrotechnisch-Werktuigkundig Ingenieur Dissertation, 1977 119 p 14 refs In Dutch

A measuring facility is described in which it is possible to calculate the various kinds of losses in a flat-plate collector under controlled conditions. The basic part of the facility is a test chamber consisting of a box of small height. The bottom surface of the box is formed by the glass of the collector, the upper consists of perforated strips and slots. Cold air is blown through the holes in the strips perpendicular to the glass. The air is then sucked up along the slots. In this way convection losses are simulated. The strips also serve as counter upper surface in radiation exchange. Extensive loss measurement results are presented, and accuracy evaluations are carried out. P T H

A78-43618 # The PERICLES project (Le projet PERICLES). B Authier. *L'Astronomie*, vol 92, June 1978, p 265-275 5 refs In French

The use of spherical solar receptors in a simply constructed device and in the PERICLES project is examined. (PERICLES is an acronym derived from the French words for energy production in isolated regions by limited concentration of solar energy.) The optimum position, form, and size of a boiler associated with a spherical solar receptor is determined for an installation with a 200-400 kW peak. The efficiencies of spherical solar receptors of different types or locations are surveyed, and it is thought an exit temperature of 350 C can be obtained by use of this design. M L

A78-43700 Controlled nuclear fusion, a challenge for the engineer. IV - Systems and components for fusion reactors (Kontrollierte Kernfusion, eine Herausforderung an den Ingenieur. IV - Systeme und Komponenten für Fusionsreaktoren). H Frey (Leybold-Heraeus GmbH und Co., Hanau, West Germany). *VDI-Z*, vol 120, no 13, July 1978, p 641-645 In German

The design and the functions of the reactor blanket are discussed along with the electrical systems and components of the reactor. The blanket, a complex envelope structure surrounding the thermonuclear plasma, has important functions. These functions are related to the transformation of the kinetic energy of fusion neutrons into thermal energy, the breeding of tritium, and, in the case of reactors using magnetic containment, also the shielding of the superconducting coils. Tritium is produced in connection with processes involving the nuclear reaction of Li-6 and Li-7 with neutrons. The high diffusion rate of tritium through niobium can be utilized for its separation. Details concerning the fuel cycle of a fusion reactor, the tritium separation system, the lithium-potassium-steam cycle (direct cooling), and the lithium-helium cycle (indirect cooling) are illustrated with the aid of diagrams. Attention is also given to the structure of a Tokamak reactor with a thermal power of 5 GW, the design of a blanket module, the stored energy of magnetic-field coils with superconducting material as a function of mean current density, measurement and control technology, and power supply systems. G R

A78-43706 Organometallic-sourced VPE AlGaAs/GaAs concentrator solar cells having conversion efficiencies of 19%. N J Nelson, K K Johnson, R L Moon, H A Vander Plas, and L W James (Varian Associates, Inc., Palo Alto, Calif.) *Applied Physics Letters*, vol 33, July 1, 1978, p 26, 27 7 refs Contract No

A78-43725 Work function and Auger measurements of the initial oxidation of hydrogenated amorphous Si and of single-crystal Si. B Goldstein and D J Szostak (RCA Laboratories, Princeton, N J.) *Applied Physics Letters*, vol 33, July 1, 1978, p 85-87 13 refs

We have monitored the change in work function during the initial oxidation of discharge-produced amorphous Si(H) and corre-

lated this change with the amount of adsorbed oxygen as measured by Auger spectroscopy. With exposure to oxygen, the work function first increases (explained in terms of a dipole layer on the surface) and then decreases (explained in terms of penetration of oxygen below the surface). The explanation appears to be confirmed by similar measurements on the three primary crystallographic faces of single-crystal Si. Initial sticking coefficient and dipole strength of oxygen adsorbed on amorphous Si are given. (Author)

A78-43748 **Emission control technology for sulphur oxides and nitrogen oxides from flue gases in Japan** T. Ohtsuka and Y. Ishihara (Central Research Institute of Electrical Power Industry, Tokyo, Japan) (*Institute of Fuel, Conference on Advancing Energy Technology, Eastbourne, Sussex, England, Oct 31-Nov 2, 1977*) *Institute of Fuel, Journal*, vol 51, June 1978, p 82-90. 31 refs.

Flue-gas desulfurization plants installed in Japan total approximately 1000 units having a capacity of 93 x 10 to the 6th normal cu m/h as of late 1976. The 30 large-capacity plants installed in the electric power industry process flue gases of about 22 x 10 to the 6th normal cu m/h (equivalent to 7188 MW of power generation). To reduce emissions of nitrogen oxides, combustion modification systems have been installed in most of the boilers in the electric power industry. Many organizations have been developing various flue gas denitrification processes to reduce emissions of nitrogen oxides further. The catalytic reduction process has reached the commercial stage for processing 'clean gas', but for 'dirty gas', technical problems remain. Wet processes for flue gas denitrification have the advantage of removing both nitrogen oxides and sulfur oxides simultaneously. Therefore, various processes have been developed at pilot plants but several technical problems have not yet been solved. These are described. (Author)

A78-43749 **Photosynthesis in vitro** M. D. Arcner (Cambridge University, Cambridge, England) (*Institute of Fuel, Conference on Advancing Energy Technology, Eastbourne, Sussex, England, Oct 31-Nov 2, 1977*) *Institute of Fuel, Journal*, vol 51, June 1978, p 100-108. 47 refs.

Various methods of direct conversion of solar energy to electrical or chemical energy are reviewed. The principles that underlie photovoltaic cells, and the mechanism of photosynthesis in vivo are discussed, and loss factors which describe the operational efficiency of these two direct converters are defined. Newer, less highly developed photoelectrochemical and photochemical methods of solar energy conversion are described and their efficiencies are discussed in terms of the same loss factors. (Author)

A78-43750 **The future of geothermal energy** H. C. H. Armistead (*Institute of Fuel, Conference on Advancing Energy Technology, Eastbourne, Sussex, England, Oct 31-Nov 2, 1977*) *Institute of Fuel, Journal*, vol 51, June 1978, p 109-118. 9 refs.

A review of present and potential geothermal energy sources is presented noting hyperthermal and semithermal fields and large masses of hot rocks. Methods for rock fracturing, drilling, and deep fracture dilation are outlined. Estimates are made of the order of magnitude of extractable heat and its qualitative value. It is observed that geothermal heat causes the least pollution of all energy sources and that it is a relatively economical procedure. SCS

A78-43752 # **Criteria for choosing a regression model for the analysis and prediction of fuel-supply processes with a seasonal component** (Obosnovanie vybora regressiionnoi modeli dlia analiza i prognozirovaniia protsessov toplivonasabzheniia s sezonnoi sostavliaushchei) V. I. Zorkal'tsev (*Akademiia Nauk SSSR, Izvestiia, Energetika i Transport*, May June 1978, p 135-143. 7 refs. In Russian)

Two methods of time series analysis - the sliding mean formula and the regression equation - are compared with respect to their ability to predict trends and seasonal fluctuations on the basis of two criteria: (1) determination of a priori requirements placed on the method of computing components, and (2) determination of the maximum power of the polynomial with respect to the time which

represents the trend. The regression model does better according to both criteria. As an example, the regression model is used to predict seasonal volumes of coal consumption. BJ

A78-43771 **On photo fuel** J. O. Bockris and L. Handley (Flinders University, Adelaide, South Australia, Australia) *Energy Conversion*, vol 18, no 1, 1978, p 18-24. 24 refs.

The process of direct solar conversion of water into hydrogen and oxygen gas is discussed. The most important research goal is the attainment of a stable photoanode with a small energy gap (0.75-1.5 eV). Recent advances in cladding, stable photocathodes, and a stable working photodriven cell are characterized. Examined topics related to the optimization of photoelectrolysis include thermodynamic requirements, band bending, the reduction potential value, surface states, and doping of semiconductors. Photocorrosion and its possible prevention is considered. Present hydrogen generation efficiencies are only 0.1% with at least 5-10% needed for commercial utility. ML

A78-43772 **Economic analysis of heat transmission from low temperature geothermal sources** H. E. Kier (Connecticut University, Storrs, Conn.) *Energy Conversion*, vol 18, no 1, 1978, p 17-23. 9 refs. Contract No. E(10-1) 1628.

The costs of transmitting low-temperature geothermal water (150-300 F) were evaluated as a function of wellhead temperature, distance between the geothermal field and the energy usage site, and total energy demand of the system. It was found that transmission was not practical beyond 2-3 miles and that economies of scale are very important. Energy demand should be above 50,000,000 Btu/hr. For drying operations located within a three mile radius of a 270 F geothermal source, energy costs are within the \$1.50-\$3.00 per 1,000,000 Btu range and could become competitive. (Author)

A78-43773 **On the relation between insolation and climatological variables. V - Estimation of availability of solar energy** D. Rapp (Texas University, Richardson, Tex.) and A. A. J. Hoffman (Texas Christian University, Fort Worth, Tex.) *Energy Conversion*, vol 18, no 1, 1978, p 31-37.

A new procedure is developed for estimating availability of solar energy in localities where adequate data are not available. The hourly variations in solar intensity with day of the year during clear weather (essentially no clouds and unlimited visibility) are shown to follow regular repeatable patterns. These patterns have been determined for four southwestern locations. From these data, it is possible to estimate the maximum possible available solar energy for perfectly clear weather. The effect of clouds and reduction in visibility is to reduce the solar intensity below the value appropriate to any hour of any day in clear weather. A study of the dependence of reduction in solar intensity on cloud cover and visibility is now being conducted for several southwestern locations. A model for the dependence of direct normal solar intensity on total insolation is also being developed. (Author)

A78-43774 **On the relation between global insolation on horizontal and tilted surfaces** D. Rapp and D. Oxley (Texas University, Richardson, Tex.) *Energy Conversion*, vol 18, no 1, 1978, p 39-43. 6 refs.

Global insolation has been measured at many sites on a horizontal surface, but is needed on a tilted surface. A study has been made of patterns of global insolation for 12 months at Fort Hood, Texas, where measurements are made on both horizontal and tilted surfaces. The results indicate that, during clear weather, use of a geometrical formula for converting horizontal to tilted insolation for direct rays result in values 3.3% high. For the twelve month period March, 1976-February, 1977, including all weather, but only hours where the insolation on the tilted surface is greater than 22 Langley/hr, the geometrical formula is 4.6% high. It is concluded that the geometrical formula can be used with small corrections. (Author)

A78-43775 Two-phase flow in geopressured geothermal wells S K Garg and J W Pritchett (Systems, Science and Software, La Jolla, Calif.) *Energy Conversion*, vol 18, no 1, 1978, p 45-51 13 refs Contract No EY 76-C-5040-IS

The production characteristics of two-phase (free methane and liquid water with dissolved methane) geopressured geothermal wells are analyzed. The fluid flow in the aquifer is treated as single-phase (liquid water with dissolved methane) unsteady radial Darcian flow, two-phase flow is assumed to occur only in the cased part of the production hole. The mathematical model allows for different gas and liquid velocities in the two-phase regime. Sample calculations illustrate the effects on production of aquifer permeability and compressibility, the depth of the geopressured aquifer, the reservoir temperature, and the dissolved methane content of the aquifer fluids. (Author)

A78-43795 Long-term energy program related to regenerative sources (Langzeit-Energieprogramm aus regenerativen Quellen) H Seitz *Sonnenenergie*, vol 3, May/June 1978, p 7, 8, 11, 12 14 refs In German

It is pointed out that with respect to historical dimensions the epochs of fossil and nuclear energy generation are very brief time periods. In order to satisfy energy requirements on a long term basis, it is necessary to utilize existing natural energy streams. The huge potential of solar energy is in this connection considered. The question whether solar energy can satisfy human energy requirements leads to another question regarding the quantity of energy needed for the current standard of life. An investigation is conducted regarding the approaches which can be used to reduce energy losses as much as possible, taking into account conditions related to the use of low temperature heat, process heat and electric power, and fuels. The generation of low-temperature heat with the aid of solar energy is considered along with the various approaches available for the generation of electric power. It is proposed to combine wind-energy installations with solar cells at a ratio 4:1 for the generated energy. The yearly distribution of the supplied energy would in this case optimally approach the distribution of yearly energy demands and energy storage requirements would be low. Attention is also given to energy related to refuse and biological sources and the production of hydrogen. G R

A78-43796 Low-temperature heating systems and solar energy (Niedertemperaturheizungen und Sonnenenergie) A Urbanek *Sonnenenergie*, vol 3, May/June 1978, p 16-18, 21 7 refs In German

It has been generally recognized that an economical supply of heat for buildings is only possible with the aid of low-temperature systems. An investigation is, therefore, conducted regarding the central significance of low-temperature heating for future residential heating applications. It is pointed out that for the utilization of solar energy, directly via solar collectors or indirectly via heat pumps, a warm-water low-temperature heating system is a necessity for an optimal economical operation. The low-temperature system (+50/25 C) operates with lower heat losses than the customary central heating system (+90/70 C) and even the medium-temperature system (+70/50 C). Attention is given to a reduction of heat losses related to a utilization of low operational temperatures, advantages of floor heating, economical operational temperatures for collectors, a limiting temperature for heat pumps, and aspects of solar heating technology. G R

A78-43825 Unit helium requirements for superconductive energy applications in the USA M A Hlal (Wisconsin, University, Madison, Wis.), G E McIntosh (CTI, Denver, Colo.), E L Stone, and S W Van Sciver *Cryogenics*, vol 18, July 1978, p 415-422 36 refs U S Bureau of Mines Contract No PO480374

The paper provides estimates of the helium inventory and annual makeup needed for commercial size units of several high technology energy systems under study and development. The study considers superconductive magnetic energy storage, magnetically confined fusion reactors, superconducting power transmission lines, magnetohydrodynamic units, superconducting motors and genera-

tors, and particle accelerators. Estimates are based on published system studies and private information provided by various experts. Simple scaling laws are developed and used to calculate helium inventory where appropriate. Helium loss rates are discussed and used in estimates of annual helium makeup. M L.

A78-43881 A baseline of logistic and power requirements for full-scale manufacturing of metallic materials in earth orbit H Bloom (General Electric Co., Space Div., Valley Forge, Pa.) In *The Industrialization of Space, Proceedings of the Twenty-third Annual Meeting*, San Francisco, Calif., October 18-20, 1977. San Diego, Calif., American Astronautical Society, Univelt, Inc., 1978 22 p 11 refs (AAS 77 237)

A number of preliminary surveys have been carried out to identify potential space processed materials that might be of sufficient worth in earth-based applications to warrant their full-scale production in space. From these surveys, this paper extracts those quantities of materials to be transported and stored, physical parameters of production equipment and facilities, on-orbit operating needs, crew needs, and power requirements that are upper limits of space processing requirements. These data are then developed into a representative baseline of the logistics and power requirements of a future mature space manufacturing program. B J

A78-43922 Planar solar energy convertor and concentrator based on uranyl-doped glass R Reisfeld and S Neuman (Jerusalem, Hebrew University, Jerusalem, Israel) *Nature*, vol 274, July 13, 1978, p 144, 145 7 refs

The paper describes the use of a fluorescent plane uranyl-doped glass to convert and concentrate the UV and blue part of the solar spectrum. The device is able to dissipate the heat energy coming directly from the sun over the large area of the glass so that only the energy in the visible part of the spectrum will reach the solar cell. The excess between the absorbed energy and the band-gap energy which is evolved as heat in the solar cell can be diminished by decreasing the difference in wavelength between the useful and excess energy. When a rectangular slab of uranyl-doped glass is coupled to a silicon cell and excited by a high pressure mercury source, a considerable increase of current and voltage is obtained. The luminescence of uranyl does not fall in the spectral range of maximum sensitivity of silicon cells, energy transfer from the uranyl ion to an ion emitting closer to the maximum spectral sensitivity of silicon is recommended. M L

A78-43926 Solar-cell design based on a distributed diode analysis J L Boone and T P Van Doren (Missouri-Rolla, University, Rolla, Mo.) *IEEE Transactions on Electron Devices*, vol ED-25, July 1978, p 767-771 5 refs

The front surface of a p-n junction solar cell has resistive losses associated with the diffused layer, the metal-semiconductor contact, and the grid structure. These losses are analyzed by considering the spatially distributed nature of the p-n junction and the grid conductors. This distributed diode analysis is especially useful for solar cells operated under concentrated sunlight conditions. The results show the dependence of the V-I characteristics and the maximum power output per unit cell on the ratio of the diffused layer resistance to the junction dynamic resistance. This ratio can assist the designer in establishing proper grid structure geometries and should typically be less than 0.1 if the power output per unit cell is to be within 3% of that for the lossless case. Experimental measurements are reported which confirm the theoretical calculations. An analysis of the grid conductor losses associated with multiple-connected unit cells shows the disastrous effect that the grid header resistance can have on the performance of a solar cell. A tapered header conductor to decrease the metal coverage may actually worsen cell performance. (Author)

A78-43958 Railroad electrification and energy conservation. W D Middleton (U S Marine Corps Air Station, Iwakuni, Japan) *Traffic Quarterly*, vol 32, July 1978, p 383-397 10 refs

The history, use, and prospects of railroad electrification in the U S are discussed with reference to the costs and oil consumption associated with the use of diesel engines Capital investment requirements are considered the main obstacle to electrification Factors improving feasibility of electrification are examined, potentials for operating economies, impact of oil price increases, impact of national energy policy, and energy savings in freight movement are considered A table which lists existing railroad electrifications is presented The outlook for government assistance on electrification is examined with attention to the provisions of the 1976 4-R Act

A78-43969 Investigation into solar heating with some methods for convection suppression A A M Sayigh (Riyadh, University, Riyadh, Saudi Arabia) In Solar cooling and heating Architectural, engineering, and legal aspects, Proceedings of the Forum, Miami Beach, Fla, December 13-15, 1976 Volume 1. Washington, D C, Hemisphere Publishing Corp, 1978, p 85-98 16 refs

This paper deals with convection suppression in flat plate collectors Seven 50 x 50 cm flat plate collectors made of 0.5 mm copper plate with copper pipes 10 cm apart carrying water and 4 mm glass covers were tested in Riyadh, Saudi Arabia Three of the collectors were filled with a honeycomb structure made of cylindrical, rectangular and square copper honeycomb Three of the remaining four were filled with different diameter of glass pyrex cylindrical honeycomb structures The seventh collector was left as it was (Author)

A78-43970 Comparative performance of several flat plate designs. M W Rupp (Olin Brass, East Alton, Ill) In Solar cooling and heating Architectural, engineering, and legal aspects, Proceedings of the Forum, Miami Beach, Fla, December 13-15, 1976 Volume 1 Washington, D C, Hemisphere Publishing Corp, 1978, p 99-112 8 refs

Tests were run to experimentally determine the collector efficiency factor for several flat plate absorber designs The tests were performed outdoors using methods proposed by the National Bureau of Standards The results indicate good correlation between experimental and theoretical values The results also indicate that

commercially available absorber plates can achieve efficiency factors in the range of 98 to 99 (Author)

A78-43971 Thermal, fluid flow and mechanical characteristics of a subatmospheric distributed flow flat plate collector. D L Spencer, C A Foster, J W J Robinson, and R L Suter (Iowa, University, Iowa City, Iowa) In Solar cooling and heating Architectural, engineering, and legal aspects, Proceedings of the Forum, Miami Beach, Fla, December 13-15, 1976 Volume 1 Washington, D C, Hemisphere Publishing Corp, 1978, p 113-135 5 refs Research supported by the Iowa Energy Policy Council

A78-43972 A design criterion on flat solar collectors based on thermal efficiency measurements S Lin (Concordia University, Montreal, Canada) In Solar cooling and heating Architectural, engineering, and legal aspects, Proceedings of the Forum, Miami Beach, Fla, December 13-15, 1976 Volume 1 Washington, D.C, Hemisphere Publishing Corp, 1978, p 151-158 National Research Council of Canada Grant No A-7929

An experimental investigation of the effect of the geometric configuration of flat solar collectors on thermal efficiency has been conducted Three different solar collectors having the same surface area of 0.86 x 1.18 sq m have been designed, manufactured and tested Experimental results provide a general guideline for the design of flat solar collectors (Author)

A78-43973 Analytical model of flat plate solar collectors. R K McMordie (Martin Marietta Aerospace, Denver, Colo) In Solar cooling and heating Architectural, engineering, and legal aspects, Proceedings of the Forum, Miami Beach, Fla, December 13-15, 1976 Volume 1 Washington, D C, Hemisphere Publishing Corp, 1978, p 195-224 Contract No E(40-1)-4941

The described model accounts for solar and IR radiation, conduction and convection losses to the ambient air, forced convection between the collector working fluid and the absorber plate, and conduction along the absorber plate between the fluid channels The model is based on an employment of the Martin Marietta Interactive Thermal Analysis System (MITAS) Attention is given to the solar collector thermal network, the transmissivities of the glass plates, the solar collector computer program input listing, the correlation of analytical and experimental data, analytical predictions regarding two aspects of collector design, collector performance as a function of solar absorptivity, and collector performance for two transparent covers G R

A78-43974 Optimal combinations of flat plate collector configurations P C Lobo, P I F Almeida, and E G O Nobrega (Paraitba, Universidade Federal, Joao Pessoa, Brazil) In Solar cooling and heating Architectural, engineering, and legal aspects, Proceedings of the Forum, Miami Beach, Fla, December 13-15, 1976 Volume 1 Washington, D C, Hemisphere Publishing Corp, 1978, p 225-251 Research sponsored by the Financiadora de Estudos e Projetos

Flat plate collector configurations are compared on the basis of efficiency and economy for thermal and power plant applications. The performance is evaluated through numerical solution on a digital computer of the set of equations constituting a mathematical model of each collector configuration The performance envelopes that describe optimal collector combinations are expressed in terms of both efficiency and economy Three different absorber materials are considered, each with 1, 2 or 3 glass covers Two glass prices are used for calculations of collector economy Results demonstrate that the optimum collector design is a function of solar radiation flux, water outlet temperature desired, air temperature, absorber material and cost It is therefore very much a function of local conditions (Author)

A78-43975 The FMSC collector subsystem for the Sandia Solar Total Energy Facility G H Eggers and J L Russell (General Atomic Co, San Diego, Calif) In Solar cooling and heating

Architectural, engineering, and legal aspects, Proceedings of the Forum, Miami Beach, Fla., December 13-15, 1976 Volume 1 Washington, D.C., Hemisphere Publishing Corp., 1978, p 255-271

The Fixed Mirror Solar Concentrator (FMSC) concept can possibly provide an alternative to the use of high-cost steerable solar concentrators. The concept is related to the discovery that there is a particular trough-like shape which will reflect light to a sharp line focus regardless of the direction of the incident sunlight. The construction of the required large fixed structure would be less expensive than a comparable large moveable structure. With the mirror in a fixed position, it is necessary to move the receiver to track the focal line as it moves in response to the sun's daily and seasonal movements. Development work conducted for an implementation of FMSC concept is discussed. A metal frame-mounted working model is now delivering heated oil. A picture is presented of a cast concrete mirror with a 3.05-m aperture, recently cast to demonstrate this novel and potentially very inexpensive construction method. G R

A78-43976 Helio-stat structural stability as a function of solar heating and ambient temperature changes F M Cutting (Honeywell, Inc., St Petersburg, Fla.) In Solar cooling and heating Architectural, engineering, and legal aspects, Proceedings of the Forum, Miami Beach, Fla., December 13-15, 1976 Volume 1 Washington, D.C., Hemisphere Publishing Corp., 1978, p 287-313 6 refs

There are indications that thermal expansion or distortions in helio-stat elements may create pointing errors of the order of accuracy required for efficient helio-stat operation. A numerical evaluation is, therefore, conducted regarding the effectiveness of various approaches intended to minimize such thermal expansion and distortion, taking into account the painting of machine elements with a white cellulose lacquer, the use of insulation, and the employment of solar shielding. It is found that a solar shield for each machine element offers the most effective solution to unsymmetrical heating. However, the cost of the louvered sheet metal panels, support framework, and brackets, may represent a significant cost impact. G R.

A78-43977 * A vacuum tube vee-trough collector for solar heating and air conditioning applications. M K Selcuk (California Institute of Technology, Jet Propulsion Laboratory, Pasadena, Calif.) In Solar cooling and heating Architectural, engineering, and legal aspects, Proceedings of the Forum, Miami Beach, Fla., December 13-15, 1976 Volume 2 Washington, D.C., Hemisphere Publishing Corp., 1978, p 317-339 5 refs Contracts No. E(49-26)-1024, No. NAS7-100

An analysis is conducted of the performance of a vee-trough vacuum tube collector proposed for use in solar heating and cooling applications. The vee-trough reflector is a triangular sectioned, flat surfaced reflector, whose axis is laid in the East West direction. A vacuum tube receiver placed at the bottom of the vee-trough collects solar heat most efficiently since convection is completely eliminated. Radiation losses are reduced by use of selective coatings on the absorber. Owing to its high temperature capabilities (300-400 F), the proposed scheme could also be used for power generation applications in combination with an organic Rankine conversion system. It is especially recommended for unattended pumping stations since the reflectors only require reversal once every six months. G R

A78-43978 A solar collector based on an array of linear 'clipped-V' channels F A Bynum, R L Donnelly, and K C Bordoloi (Louisville, University, Louisville, Ky.) In Solar cooling and heating Architectural, engineering, and legal aspects, Proceedings of the Forum, Miami Beach, Fla., December 13-15, 1976 Volume 2 Washington, D.C., Hemisphere Publishing Corp., 1978, p 341-349

An absorbing type air heating solar collector of clipped-V geometry is studied in terms of the effect of the variation of two geometric variables namely, the ratio between the width at the bottom of the channel and the width at the top of the channel and

the angle between the two side panels. The results indicate that there is a trade-off between the heat loss coefficient and the collector efficiency factor when these are considered as functions of the two above mentioned geometric variables. The studies were done assuming as fixed another set of variables such as those which determine the top loss coefficient and the radiative heat loss coefficient. Other variables which were held fixed were the width of the channel and the ratio between the flow length and five times the spacing between the glass covers and the bottom of the channel. Further studies need to be done in order to ascertain whether different assumptions made in modeling relations between the variables would produce significantly different results. (Author)

A78-43979 Design and operational evaluation of a non-tracking solar concentrator. J Villanueva and H V Truong (Florida Atlantic University, Boca Raton, Fla.) In Solar cooling and heating Architectural, engineering, and legal aspects, Proceedings of the Forum, Miami Beach, Fla., December 13-15, 1976 Volume 2 Washington, D.C., Hemisphere Publishing Corp., 1978, p 351-365 9 refs

This paper is concerned with the design, construction and operational evaluation of a truncated nontracking concentrating solar collector of the type proposed by Winston (1975). The collector design was optimized for operation in the range of temperatures required to fire an absorption air-conditioning system with reasonable efficiency. The equilibrium temperature of the collector was measured with the solar radiation beam at angles of 0, 5, 10, and 15 deg with the optical axis of the collector and a solar intensity of 270 BTU/sq ft-hr. The measured equilibrium temperatures were 248 F at 10 deg of incidence and 230 F at 15 deg of incidence. The tests performed on the collector were in a temperature range of T(out) from 110 F to 194 F which can be considered moderate. However, the equilibrium temperatures measured (around 250 F at a solar intensity of 270 BTU/sq ft-hr) indicate that higher outlet temperatures are possible with better insulation around the storage tank and over the circulation system. (Author)

A78-43980 A moderately concentrating solar collector H S Robertson (Miami, University, Coral Gables, Fla.) In Solar cooling and heating Architectural, engineering, and legal aspects, Proceedings of the Forum, Miami Beach, Fla., December 13-15, 1976 Volume 2 Washington, D.C., Hemisphere Publishing Corp., 1978, p 377-381

The collector described and analyzed in this paper has the properties that it collects radiation from the whole sky while concentrating the beam radiation by a factor of 1.3-1.6. Its performance, at worst, equals that of a comparable flat-plate collector, and when the sun is shining it provides significantly higher output temperatures and efficiencies. In a typical example, if the comparable flat-plate collector produces fluid at 180 F and 40% efficiency, the collector described will give 204 F at 50% efficiency and the same flow rate or 210 F at reduced flow rate and 40% efficiency. The gains in output temperature occur in a range of considerable importance to the performance of solar absorption air conditioners, and appreciable improvement should result from the use of this collector. (Author)

A78-43981 Optimization of heat exchangers for solar concentrators P R Damshala and J R Williams (Georgia Institute of Technology, Atlanta, Ga.) In Solar cooling and heating Architectural, engineering, and legal aspects, Proceedings of the Forum, Miami Beach, Fla., December 13-15, 1976 Volume 2 Washington, D.C., Hemisphere Publishing Corp., 1978, p 383-407 9 refs ERDA-supported research

A parametric study is done on heat exchangers to be used for cylindrical fixed mirror concentrators. The operational parameters, such as inlet fluid temperature, solar insolation, fluid flow rate, ambient temperature and wind velocities, are varied. The geometrical parameters, the absorber plate width and the diameter of the embedded copper tubes are also varied. The results of variation of these parameters and their effect on thermal efficiency of the heat exchanger are presented in graphical form. A mathematical expres-

sion for predicting the thermal efficiency or exit fluid temperature is developed for a given solar data and inlet fluid temperature. The Rankine fluid (Toluene or Benzene) vaporized by the collector fluid (Therminol 66) in a heat exchanger is passed through a Rankine turbine to produce shaft power. The collector mean fluid temperature is optimized to produce the maximum power for a given solar insolation and ambient conditions. The overall efficiency of the solar system vs the mean collector fluid temperature are presented in graphical form for series and parallel connections of solar collectors. (Author)

A78-43982 **Geothermal storage of solar energy for electric power generation** R E Collins (Houston, University, Houston, Tex) and K E Davis (Subsurface, Inc., Bellaire, Tex). In *Solar cooling and heating Architectural, engineering, and legal aspects, Proceedings of the Forum, Miami Beach, Fla., December 13-15, 1976* Volume 2. Washington, D C, Hemisphere Publishing Corp., 1978, p 411-424. 14 refs.

An investigation is conducted of a system for storing solar energy in the form of heat in permeable subsurface rock formations. The system envisioned consists of a well bore penetrating a deep lying porous permeable aquifer of considerable thickness. High pressure hot water or superheated steam would, when injected into the aquifer, displace the resident brine away from the well bore. After an initial period of 12 days for the establishment of the required conditions, about one third to two thirds of each day's production of solar energy would be injected during daylight hours for retrieval at night. Attention is given to a theoretical analysis of the thermal losses, the well system, aspects of well design, site selection, environmental considerations, and economics. On the basis of the investigation it is concluded that the considered method of solar energy storage might have the potential for providing a solar energy system for baseline electric power generation. G R

A78-43983 **Some experimental data for thermal pile energy storage** A A M Sayigh and M R Shaalan (Riyadh, University, Riyadh, Saudi Arabia). In *Solar cooling and heating Architectural, engineering, and legal aspects, Proceedings of the Forum, Miami Beach, Fla., December 13-15, 1976* Volume 2. Washington, D C, Hemisphere Publishing Corp., 1978, p 425-444. 13 refs.

A description is presented of a theoretical analysis and an experimental investigation regarding the possibility to use rocks for thermal storage applications in connection with the utilization of solar energy. The theoretical analysis reported is concerned with the mathematical relations governing the flow of air through packed beds. In the experimental investigation a number of materials were tested separately concerning their suitability for storing a given amount of heat. Twenty-four thermocouples were used to record the temperatures at various locations in the employed container. It was found that the best thermal storage material available in Saudi Arabia is limestone. Other materials studied include sandstone, petrified wood, concrete, water bottles, bricks, glass balls, and steel balls. G R

A78-43984 **Long duration earth storage of solar energy** S W Yuan, A M Bloom, and M Nazli (George Washington University, Washington, D C). In *Solar cooling and heating Architectural, engineering, and legal aspects, Proceedings of the Forum, Miami Beach, Fla., December 13-15, 1976* Volume 2. Washington, D C, Hemisphere Publishing Corp., 1978, p 445-457. 5 refs.

This investigation analyzes the heat transfer characteristics of long-duration storage of solar energy in an earth reservoir. The heat input to the earth storage is provided for by the operation of solar collectors. A water pipe heat exchanger is used to (1) distribute the solar collected heat throughout the earth storage and (2) extract heat from the earth storage for space heating. The solar collection process is performed each day and is shut off during the night. Solar energy is collected in this manner throughout the entire year and stored in the earth reservoir. For space heating applications house load data is

applied to the earth storage during the winter months. It is demonstrated that year round solar collection and approximately 400,000 cu ft of earth storage are adequate to provide space heating for twelve average size houses in most areas of the United States. (Author)

A78-43985 **On the prediction of melting rate in a solar energy storage subsystem utilizing latent heat** M N Ozisik and K J Mody (North Carolina State University, Raleigh, N C). In *Solar cooling and heating Architectural, engineering, and legal aspects, Proceedings of the Forum, Miami Beach, Fla., December 13-15, 1976* Volume 2. Washington, D C, Hemisphere Publishing Corp., 1978, p 471-479.

A method of analysis is presented for the determination of the rate of melting in a solar energy storage subsystem in which a phase change material in the form of a slab is heated with channel flow over its bounding surfaces. The results of the analysis are presented in dimensionless form for the thickness of the melt layer and the temperature of the fluid along the channel as a function of time and position over a range of parameters of practical interest. (Author)

A78-43987 **Field study of a solar energy assisted heat pump heating system** S F Gilman, E R McLaughlin (Pennsylvania State University, University Park, Pa), and M W Wildin (New Mexico, University, Albuquerque, N Mex). In *Solar cooling and heating Architectural, engineering, and legal aspects, Proceedings of the Forum, Miami Beach, Fla., December 13-15, 1976* Volume 2. Washington, D C, Hemisphere Publishing Corp., 1978, p 577-614. NSF ERDA supported research.

A description is presented of a portion of a project involving a field evaluation of an existing solar energy assisted heat pump in a commercial office building. The Solar Building has a solar-heated floor area of 5000 sq ft, that is separated from a conventionally heated and cooled portion by means of fixed partitions and doors equipped with door closers. The performance of the solar collector used is comparable to currently available liquid types. It is found that the relative amounts of direct heating and heat pump heating have considerable influence on the seasonal performance factor. These amounts are dependent on many variables, such as the building, its use, and the local climate. The completion of a computer model will permit studying the influences of these variables as well as predict the energy consumption over the entire winter period. G R

A78-43988 **Second-law assessment of solar heating and cooling systems** J E Lay (Michigan State University, East Lansing, Mich). In *Solar cooling and heating Architectural, engineering, and legal aspects, Proceedings of the Forum, Miami Beach, Fla., December 13-15, 1976* Volume 3. Washington, D C, Hemisphere Publishing Corp., 1978, p 701-722. 15 refs.

Service hot water and residential heating and cooling are the first significant applications of solar energy in the latter part of the twentieth century. The technology is well developed, the systems are known to be viable, and the costs of solar heating are competitive with conventional fuels in many parts of the country. This paper presents a thermodynamic analysis of present solar systems and proposes a second-law efficiency rating in lieu of the standard first law efficiency rating for the evaluation of the performance of energy conversion devices. The second law efficiency is defined as the ratio of the least available work to perform an energy transfer to the actual available work to perform the transfer. All the second law efficiencies presented are extremely low, proving that present systems are far from ideal. It is, however, within reach of present technology to achieve higher second law efficiencies. (Author)

Washington, D C , Hemisphere Publishing Corp , 1978, p 737-746 9 refs Contract No NAS8-30756

An experimental investigation of sixteen different refrigerant-absorbent fluid pairs has been carried out in order to determine their suitability as the working fluid in a solar-powered absorption cycle air conditioner. The criteria used in the initial selection of a refrigerant-absorbent pair included high affinity (large negative deviation from Raoult's Law), high solubility, low specific heat, low viscosity, stability, corrosive properties, safety, and cost. For practical solar considerations of a fluid pair, refrigerants were selected with low boiling points whereas absorbent fluids were selected with a boiling point considerably above that of the refrigerant. Additional restrictions are determined by the operating temperatures of the absorber and the generator, these temperatures were specified as 100 F (39 C) and 170 F (77 C). Data are presented for a few selected pressures at the specified absorber and generator temperatures (Author)

A78-43990 Solar energy powered domestic air conditioner for solar day operation A F Romero and G Best (Universidad Nacional Autonoma de Mexico, Mexico City, Mexico) In Solar cooling and heating Architectural, engineering, and legal aspects, Proceedings of the Forum, Miami Beach, Fla , December 13-15, 1976 Volume 3 Washington, D C , Hemisphere Publishing Corp , 1978, p 771-778

A solar air conditioning unit has been designed based on an NH₃-H₂O-H₂ cycle which requires no moving part except the air fan at the evaporator. The system was a two ton evaporator and the design operating conditions are those of the city of Mexicali, Baja California Norte, Mexico, where temperatures of more than 308 K are not uncommon, but where an average of 272 sunny days per year and a mean annual daily radiation of 500 cal/sq cm per day permit a theoretical coefficient of performance (COP) of 0.609, even at generating temperatures as low as 353 K (Author)

A78-43991 Stirling cycle solar cooling system R I Pedrosa (American Industrial Systems, Inc, Miami, Fla) In Solar cooling and heating Architectural, engineering, and legal aspects, Proceedings of the Forum, Miami Beach, Fla , December 13-15, 1976 Volume 3 Washington, D C , Hemisphere Publishing Corp , 1978, p 793-799 8 refs

The Stirling cycle engine is considered for application to solar powered cooling systems. Two approaches are possible. First, the use of a Stirling engine transmitting mechanical power to any type of cooling unit, and the integral design of a Stirling engine and cooling system. The first approach offers more flexibility in the design of the engine and allows for a broader selection of cooling systems. The integral design would use a single drive mechanism for both the engine and cooling units, thereby, reducing total mechanical friction and possibly offering a better efficiency. The integral design would be self contained using the same working fluid in the cooling cycle as in the engine (Author)

A78-43992 Dynamic simulation of a solar powered Rankine cycle/vapor compression cycle (RC/VCC) R W Allen, D K Anand, and A N Egrikan (Maryland, University, College Park, Md) In Solar cooling and heating Architectural, engineering, and legal aspects, Proceedings of the Forum, Miami Beach, Fla , December 13-15, 1976 Volume 3 Washington, D C , Hemisphere Publishing Corp , 1978, p 803-814 9 refs Contract No E(40 1)-4976

A simple solar air conditioning system incorporating a Rankine cycle vapor compression cycle (RC/VCC) cooling subsystem is simulated by means of equations RC/VCC overall (heating-to-cooling) cycle coefficient of performance (OCCOP) is reported as a function of input temperatures for sample design point models and for sample off-design models. Off-design capacity performance of a sample RC/VCC subsystem is reported. Sample RC/VCC subsystems with selected design and off-design OCCOP characteristics are coupled to high and moderate performance collectors and the hourly, daily, and weekly performance is determined in terms of the

system (insolation-to-cooling) coefficient of performance (SCOP). Selected parametric effects are described (Author)

A78-43993 Dynamic modelling of solar energy systems using DYNYSYS A I Johnson and H N Nwagha (Western Ontario, University, London, Canada) In Solar cooling and heating Architectural, engineering, and legal aspects, Proceedings of the Forum, Miami Beach, Fla , December 13-15, 1976 Volume 3 Washington, D C , Hemisphere Publishing Corp , 1978, p 815-830 14 refs

DYNYSYS, an acronym for DYNamic SYstems Simulator, is a modular problem-oriented executive program based on matrix combination structure to allocate streams and equipment information. A main executive program performs all the control operations for the computer system such as printing and graphics, calls for input data reading, calculations, and checking and writing output results. Various matrices are used to store information which describes the simulation network, the equipment parameters and component properties, and the state of the various streams at the predictor and corrector steps. In solar energy systems modeling, different modules describe the collector, heat exchanger, storage tanks, valves, controllers, absorption systems (comprising the generator, evaporator, condenser, absorber and cooling tower). The modeling so far is confined to home heating and cooling (Author)

A78-43994 Study on parameter variations for solar powered lithium bromide absorption cooling W F Bessler and C N Shen (Rensselaer Polytechnic Institute, Troy, NY) In Solar cooling and heating Architectural, engineering, and legal aspects, Proceedings of the Forum, Miami Beach, Fla , December 13-15, 1976 Volume 3 Washington, D C , Hemisphere Publishing Corp , 1978, p 847-864 6 refs

This paper investigates methods of improving the performance from an economic and performance standpoint of a solar system by varying the pertinent parameters. Use of solar energy is considered to provide a low temperature heat source to power an absorption cycle refrigeration to be used in the cooling of buildings. The variables that are investigated are mass flow rate, temperature of condenser, absorber, evaporation to determine the effect on the coefficient of performance, to study the system sensitivity and to optimize system performance. The concept of latent heat storage within the absorption-cycle is examined by a computer program to account for all important temperature and flow parameters so that sensitivity and optimization studies can be made with respect to temperature flows and storage requirements (Author)

A78-43995 Simulation of a solar assisted and open cycle cooling/system using air as the transport medium R L Gamble (Ohio State University, Cincinnati, Ohio) In Solar cooling and heating Architectural, engineering, and legal aspects, Proceedings of the Forum, Miami Beach, Fla , December 13-15, 1976 Volume 3 Washington, D C , Hemisphere Publishing Corp , 1978, p 865-893 10 refs

This paper presents the formulation of a model of a solar-assisted air-transport conditioning system for a typical residential home. The model simulates five major equipment components and two supportive units. The operation of the system depends basically on the functioning of the transfer of heat between rotary air heat exchangers. Cooling effect is provided to circulating air by the transfer of moisture from one wheel to another, as does the Munter's Environmental Unit (MEC) now being tested in prototype by the Institute of Gas Technology. Results of the mathematical formulation of the model are analyzed using actual solar and weather data. The results identify the operating ranges, constraints, and thermal efficiency of the system. Operating curves are presented, and the performance of this and other systems are compared. The validity of the model and the feasibility of the cooling apparatus within various operating and ambient temperature ranges are discussed (Author)

A78-43996 Comparison of simulated solar cooling systems in Saudi Arabia R L Jenks, A Kremheller (Petroleum and Minerals University, Dhahran, Saudi Arabia), and R W Jones (South Dakota,

University, Vermillion, S Dak.) In Solar cooling and heating Architectural, engineering, and legal aspects, Proceedings of the Forum, Miami Beach, Fla., December 13-15, 1976 Volume 3 Washington, D C, Hemisphere Publishing Corp., 1978, p 907-920 15 refs

Solar-powered space cooling of buildings in the Gulf region of Saudi Arabia is simulated by digital computer The cooling is achieved by a lithium bromide-water absorption air conditioner powered by hot water supplied by flat-plate solar collectors The Gulf region has a cooling season which combines high temperature and high relative humidity This extreme climate provides a rigorous test of the feasibility of space cooling under severe conditions Two different systems of energy storage are simulated one in which hot water from the solar collectors is stored and used to drive the air conditioner which directly cools the building, and the other in which the air conditioner is operated as a water chiller, the cold water being stored and used, as required, for cooling Present results indicate that a combined system appears desirable, since it will provide nearly the total cooling load of a building with a solar-collector area of about one-third of the floor area of the building (Author)

A78-43997 **Solar energy coupled networks** J R Marks, P D Lonski, K M Casey, and L A Madonna (Widener College, Chester, Pa.) In Solar cooling and heating Architectural, engineering, and legal aspects, Proceedings of the Forum, Miami Beach, Fla December 13-15, 1976 Volume 3 Washington, D C, Hemisphere Publishing Corp., 1978, p 939-954

The paper presents an analysis of the coupling networks associated with solar energy absorbing systems The networks are treated as phase spaces, and, in the investigated problem, two phase spaces are coupled through the use of a transduction element which is the turbine Matrix-type mathematical models for the phase spaces are constructed by assigning every piece of equipment a number and calling that piece of equipment a network node The transport equation is transposed and subtracted from the original expression to generate a generalized Kirchhoff matrix equation which shows all net energy or matter flows from each node In general, two Kirchhoffian expressions, one for energy and the other for matter, are required

A78-43998 **The differential cost of a solar energy system completing the assessment.** R H Rand (Ballinger, Architects and Engineers, Philadelphia, Pa.) In Solar cooling and heating Architectural, engineering, and legal aspects, Proceedings of the Forum, Miami Beach, Fla., December 13-15, 1976 Volume 3 Washington, D C, Hemisphere Publishing Corp., 1978, p 1005-1015

It is suggested that cost analyses of solar heating and cooling should take related implementation costs, land and space costs, and time-generated costs into account in addition to costs directly attributable to solar energy equipment and resultant changes in energy consumption Related implementation costs include the design and construction of structural support, weathertight integrity, and environmental control systems Site configuration and orientation may increase land cost, reduce building size, or introduce structural complexity, it is estimated that any of these can generate a premium equal to 1% of land plus building cost Time-related costs include taxes, interest on construction loans, escalation, and delayed return on investment An example cost analysis involving support, land, space, and time costs is presented

A78-44047 **Buried impact craters in the Williston Basin and adjacent area** H B Sawatzky In Impact and explosion cratering Planetary and terrestrial implications, Proceedings of the Symposium on Planetary Cratering Mechanics, Flagstaff, Ariz., September 13-17, 1976 New York, Pergamon Press, Inc., 1977, p 461-480 17 refs

Five subsurface structures, either within or adjacent to the Williston Basin, reveal some of the essential ear-marks of terrestrial impact craters One (Viewfield, Saskatchewan) is a simple bowl-shaped crater and the remainder are complex models, which, in addition to the structurally elevated outer rim, also display a positive highly disturbed central core Two of these features appear to be Late Cretaceous, or younger, in age and three are dated as Jurassic-Triassic The Red Wing Creek, North Dakota and Viewfield, Saskatchewan geophysical anomalies (interpreted as buried impacts) have yielded commercial oil production, the former from the central area and the latter from the outer rim Some interesting hydrocarbon occurrences are indicated at the other sites These too may be potential commercial oil producers but they have been inadequately explored to date

A78-44108 * Hydrogen attack - Influence of hydrogen sulfide D Eliezer and H G Nelson (NASA Ames Research Center, Moffett Field, Calif.). *National Association of Corrosion Engineers, International Corrosion Forum Devoted Exclusively to the Protection and Performance of Materials, Houston, Tex., Mar 6-10, 1978, Paper 9 p 9 refs*

An experimental study is conducted on 12.5-mm-thick SAE 1020 steel (plain carbon steel) plate to assess hydrogen attack at room temperature after specimen exposure at 525 C to hydrogen and a blend of hydrogen sulfide and hydrogen at a pressure of 3.5 MN/sq m for exposure times up to 240 hr. The results are discussed in terms of tensile properties, fissure formation, and surface scales. It is shown that hydrogen attack from a high-purity hydrogen environment is severe, with the formation of numerous methane fissures and bubbles along with a significant reduction in the room-temperature tensile yield and ultimate strengths. However, no hydrogen attack is observed in the hydrogen/hydrogen sulfide blend environment, i.e., no fissure or bubble formation occurred and the room-temperature tensile properties remained unchanged. It is suggested that the observed porous discontinuous scale of FeS acts as a barrier to hydrogen entry, thus reducing its effective equilibrium solubility in the iron lattice. Therefore, hydrogen attack should not occur in pressure-vessel steels used in many coal gasification processes. S D

A78-44109 Liquid metal cooling concepts in solar power application P B Deegan, J D Mangus, and G A Whitlow (Westinghouse Electric Corp., Advanced Reactors Div., Madison, Pa.). *National Association of Corrosion Engineers, International Corrosion Forum Devoted Exclusively to the Protection and Performance of Materials, Houston, Tex., Mar 6-10, 1978, Paper 15 p 7 refs.*

The paper evaluates the application of liquid-sodium cooling to solar thermal power plant with appropriate comparisons with other proposed coolant fluids. It is shown that the thermodynamic and thermophysical properties as well as the proven technology of a liquid sodium heat transport system provide numerous advantages and benefits for application to a central receiver solar thermal power plant concept. Major advantages are (1) attainment of high thermodynamic-cycle efficiencies, (2) reduced relative costs, and (3) realization of the system concept by the mid-1980s through the use of proven liquid-metal technology developed in the power industry, without recourse to extensive development programs. The overall plant net efficiency is predicted to approach 40% for either storage or receiver operation, which is beneficial for the size, cost and design of pertinent subsystems. S D

A78-44112 Liquid metal requirements for inertial confinement fusion. W R Meier and J A Maniscalco (California, University, Livermore, Calif.). *National Association of Corrosion Engineers, International Corrosion Forum Devoted Exclusively to the Protection and Performance of Materials, Houston, Tex., Mar 6-10, 1978, Paper 21 p 22 refs* Contract No W 7405-eng-48

The paper surveys and evaluates the possible applications of liquid metals in laser inertial confinement fusion power plants and describes a particular laser fusion reactor concept that uses liquid lithium for first-wall and blanket structure protection, tritium breeding, and heat removal. The absence of magnetic fields makes it easier to use liquid metals as coolants, and the lower fusion chamber vacuum requirements make it possible to consider liquid metals as first-wall and blanket structure protectors. Lead, sodium, and lithium are compared in performing these three functions, and lithium is shown to adequately fulfill all the functions. Lithium also serves for tritium breeding. The liquid-lithium waterfall reactor is presented as a concept in which liquid lithium acts as the coolant, tritium breeder, and first-wall and blanket structure protector. S D

A78-44119 Evaluation of the efficiency of a device which uses solar energy to apply thermal shocks to gas (Evaluation de l'efficacité d'un dispositif permettant de réaliser des chocs thermiques sur des gaz par concentration d'énergie solaire) J Lede, C Weber, and J Villermaux (CNRS, Laboratoire des Sciences du Génie

Chimique, Nancy, France) *Académie des Sciences (Paris), Comptes Rendus, Serie B - Sciences Physiques*, vol 286, no 22, June 5, 1978, p 299-302. 5 refs. In French.

The thermal shock device described uses a conical injector nozzle as an absorbing cavity for concentrated solar energy. Experiments with methane are reported, the gas flowing rapidly through the nozzle is heated to nearly 1700 K by the walls which are nearly 2500 K. The methane was very rapidly chilled by contact with jets of cold argon gas in a reaction chamber. Four jets of argon assure complete mixing. Two methods in conjunction with two models are used to analyze the results and determine the rate of heating. One method involves solution of heat equations and the other method is concerned with the amount of acetylene formed. Both methods indicate that the methane is heated in the order of 1,000,000 deg/s. M L

A78-44122 Energy analysis, energy quality, and environment. H T Odum (Florida, University, Gainesville, Fla.). In *Energy analysis. A new public policy tool* Boulder, Colo., Westview Press, Inc. (AAAS Selected Symposia Series, No 9), 1978, p 54-87. 13 refs. Research supported by the National Research Council, Contract No E(40-1)-4398.

The paper describes methods of energy analysis used to characterize the energetics of man and the biosphere and to evaluate alternative choices in energy utilization. The basic energy diagram and the preparation of relevant data are explained, energy quality, its evaluation, and its significance as a value measure are considered, concepts of energy cost and energy quality are presented, and the application of these concepts to natural and economic systems as well as to alternatives of special interest in energy policy-making are discussed. M L

A78-44123 Energy analysis and energy RD&D - Planning and decisionmaking. R H Williamson (U.S. Department of Energy, Office of the Assistant Administrator for Planning, Analysis and Evaluation, Washington, D.C.). In *Energy analysis. A new public policy tool* Boulder, Colo., Westview Press, Inc. (AAAS Selected Symposia Series, No 9), 1978, p 88-96.

The paper presents a status report on what ERDA has done in the way of net energy analyses, summarizes the energy analysis procedures and guidelines used within ERDA, reports a few insights and findings from ERDA's current work, and discusses how ERDA is currently progressing towards the use of net energy analysis in decision-making. The goals of the ERDA net energy analysis are to obtain an initial energy analysis for each of the generic technologies under consideration, to improve the definitional and computational aspects of net energy analysis, and to establish some uniform guidelines for the sake of compatibility. M L

A78-44149 Geothermal perturbations on the atmospheric environment. R E Kelly (Mississippi, University, University, Miss.). *Geothermal Energy*, vol 6, June 1978, p 19-24. 9 refs. Contract No W-7405-eng-48.

A simple but not precise procedure for using existing meteorological data to predict air quality changes due to geothermal sources is explained. Since geothermal sources emit large amounts of water vapor and heat, the procedure is concerned with predicting changes in relative humidity and temperature. Modifications caused by atmospheric inversions and nonzero stack heights are examined, and the effects of particulate settling, chemical reactions, and radioactive decay are studied. The statistical Gaussian equation for dispersion is applied in the mathematical method used to calculate pollution concentration as well as temperature and relative humidity changes by an emitted plume. The procedure is used to predict characteristics of Imperial Valley, California, installations. M L

A78-44150 The effect of the Broadlands Geothermal Power Scheme on the Waikato River. D J Willis (New Zealand Electricity Department, Power Station Siting Section, New Zealand). *Geothermal Energy*, vol 6, June 1978, p 25-34. 6 refs.

The Broadlands Geothermal Power Scheme which, in its first full year of operation is planned to provide 3% of the total energy

generated in New Zealand, is described, and procedures for disposing of the hot and chemical-laden bore water without damaging the Waikato River are considered. Characteristics of the Waikato River and of the bore water are reported. Since river temperature increases that would result from open cycle condenser cooling are unacceptable, condenser cooling alternatives are examined, and the use of mechanical draft cooling towers is found to be most suitable. While chemical procedures for reducing ammonia and arsenic ion levels in the bore water could be established, the problem is obviated by injecting waste bore water directly into the ground, this is the recommended method for disposal. M L

A78-44192 A graphical approach to determine the economics of recovering resources from municipal solid waste. J G Abert and R M Vancil (National Center for Resource Recovery, Inc., Washington, D C). *Conservation and Recycling*, vol 1, no 3-4, 1977, p 299-314. 43 refs

A rough determination of the economic feasibility of resource recovery as a substitute in whole or in part for traditional forms of solid waste disposal may be all that is necessary for a community to embark on a course leading to the construction of a facility, or to show a lack of economic viability in particular circumstances. Often, feasibility studies are commissioned which result in rather large expenditures of time and money. The purpose of this paper is to offer a convenient method of evaluating recovery potential, given a set of initial and locally determined inputs. The evaluative tool is a graphic device which combines in the form of a nomograph the pertinent cost and revenue relationships. The device answers the question as to whether recovery is economically competitive with the alternatives for solid waste disposal. Put differently, the device will help decide whether recovery is likely to increase or decrease costs. (Author)

A78-44197 # The effect of fuel consumption on cost developments (Der Einfluss des Kraftstoffverbrauchs auf die Kostenentwicklung). B Glockner (Gesellschaft für Internationalen Flugverkehr mbH, Berlin, East Germany). *Technisch-ökonomische Information der zivilen Luftfahrt*, vol 14, no 2, 1978, p 80-83. In German

In connection with the trends of increasing fuel costs, approaches for reducing fuel consumption have become very important for the profitability of airline operations. The introduction of new directions for refueling in conjunction with an adherence to favorable flight regimes has made it possible for INTERFLUG, the airline of the German Democratic Republic, to save huge amounts of fuels without violating the requirements of flight safety. An investigation is conducted regarding the connection between fuel consumption and cost developments. Differences in the fuel prices of different countries are one of several factors which make it difficult to optimize costs. The cost of fuel as a part of the flight-time related expenses depends to a very large extent on the route of the aircraft. In the case of great price differences, it is customary to obtain additional fuel at places where the prices are low. The transportation of a greater amount of fuel, on the other hand, leads to a greater fuel consumption, which has also to be taken into consideration. Aspects of fuel consumption in relation to air route and flight time are studied and costs which depend on the time of flight are considered. G R.

A78-44220 Voltage transformers for solar elements (Spannungswandler für Solarelemente). N Rohde (Neurologische Universitätsklinik, Düsseldorf, West Germany). *Elektronik*, vol 27, July 1978, p 76-78. 7 refs. In German

The design of solar generators must be based on the voltage provided by the individual element. This voltage does not exceed a value of 0.5 V. Approaches involving a voltage transformation with the aid of germanium transistors were used to avoid series combination of many elements. The introduction of field-effect power transistors has improved conditions significantly. Certain limitations are related to the voltage level required for the control of the field-effect power transistors. The design of self-starting transformers

appears, therefore, difficult. However, the solar generator employs generally a buffer which provides energy during darkness. Attention is given to the control of the transformer device in connection with an operation during the times at which sufficient light is available, taking into account design details involving the use of a photovoltaic cell. G R

A78-44222 Silicon solar cells in appliances and installations (Silizium-Solarzellen in Gebrauchsgerten und Anlagen). P Kipp (Ferranti GmbH, Munich, West Germany). *Elektronik*, vol 27, July 1978, p 95-99. In German

The use of silicon solar cells in devices and installations with power requirements of several watts is considered, taking into account, in addition to a use of solar radiation, also a utilization of artificial light sources, such as incandescent and fluorescent lamps. The spectral sensitivity of silicon cells is compared with the spectral energy distributions of solar radiation, the light of an incandescent lamp, and the light of a fluorescent lamp. The determination of the required dimensions for a solar generator is illustrated with the aid of an example involving the design of a solar generator for a 100 W radio relay station. Applications of the considered solar generators are related to radio beacons mounted on a buoy, a mobile receiving station, a portable generator for a daily electrical energy consumption of 3 Ah, a mobile home, a large clock, and a flashlight. G R

A78-44226 A solar airship - More than a flight of fancy. G Khoury (Imperial College of Science and Technology, London, England) and E Mowforth (Surrey University, Guildford, England). *New Scientist*, vol 79, July 13, 1978, p 100-102

The development of a solar-powered aircraft is considered. The design consists of an aircraft carrying an array of solar cells over most of its surface. The cells represent a weight of approximately one third of the overall envelope. A 20% efficiency in energy conversion is expected along with an airspeed of over 100 km/h for over six hours during the day. Potential energy storage systems include the use of electrolysis to produce hydrogen which would be stored in pods and used to fuel gas turbines. S C S

A78-44333 # Solar water heater using heat pipes (Solnechnyyi vodonagrevatel' na osnove teplovykh trubok). O Mukhammetdurdyeva, R Baimov, and K Toiliyev (Turkmenkii Gosudarstvennyi Universitet, Ashkhabad, Turkmen SSR). *Akademika Nauk Turkmenkoi SSR, Izvestia, Seria Fiziko-Tekhnicheskikh, Khimicheskikh i Geologicheskikh Nauk*, no 2, 1978, p 111-113. In Russian

A solar water heater is described, the heat receiving part of which consists of two heat pipes in a copper container 82 cm in length and with an outer diameter of 17 mm. Twenty Duralumin plates measuring 8 x 8 cm are soldered onto the heated portions of the heat pipes in order to increase the useful area. The heated part of the pipes is located in a box measuring 65 x 21.5 x 10.5 cm made of 2-cm-thick boards. The insulating material is covered by aluminum foil. By the use of heat pipes, not all of the heated water is contained in the box, so that heat losses through the transparent coating are reduced. Lower working temperatures can be used, since the heat pipes can transfer heat at low temperature gradients between the evaporation and condensation zones. Tests showed the heat-pipe water heater to be as effective as conventional ones. P T H

A78-44334 # Analysis of the effect of mismatch of thermal battery parameters and external factors on the operation of a solar thermoelectric generator (Analiz vlianiya rassoglasovaniya parametrov termobatarei i vneshnikh faktorov na rezhim raboty solnechnogo termoelektrogeneratora /STEG/). A78-44429 Comparative calculations for thin-film and bulk single-crystal Schottky-barrier solar cells. R J Soukup and L

A Akers (Nebraska, University, Lincoln, Neb.) *Journal of Applied Physics*, vol 49, July 1978, p 4031-4034 11 refs

A mathematical analysis of the expected short-circuit current density in Schottky-barrier solar cells is presented. For a solar cell with the Schottky barrier on the bottom, back illuminated, the active semiconductor material, GaAs for this example, must be a thin film for maximum efficiency. A comparison between this cell and a single-crystal solar cell with the Schottky barrier on the top, front illuminated is made. This comparison shows that solar cells made from polycrystalline films could deliver the same short-circuit current as a single crystal solar cell provided that the minority-carrier diffusion length in the polycrystalline films can be kept to within one order of magnitude lower than that for the single-crystal material. The reason for this is that solar-reflection losses for the back-illuminated thin-film cell can be minimized, while for the front-illuminated single-crystal cell the losses must always be high.

A78-44451 # Energy resources - Revisited 1977 W B Haidler (Southwestern Michigan College, Dowagiac, Mich.) *Air University Review*, vol 29, May-June 1978, p 39-50 23 refs.

The energy crisis is presented as being real and immediate. Attention is given to the problem of dwindling reserves of oil and natural gas (especially in the United States), coupled with energy consumption at or above pre-crisis levels (before 1973). It is emphasized that America must rely increasingly on imported oil from politically unstable areas, i.e., the Middle East, and that for the short term, conservation is essential to hold down imports. Alternative sources of energy, e.g., wind, solar, tar sands, and nuclear fusion, are expected to make substantial contributions to the total energy supply beginning only in the period around the turn of the century. Until then, coal and its derivatives (in solid, liquid, and gaseous form) can make up the shortfall if steps are taken now to develop the required technology.

New York, American Institute of Aeronautics and Astronautics, Inc., 1978, p 20-25

Various contributions of the Grumman Aerospace Corporation to the public sector are discussed with reference to their origins in high technology programs and their present use in everyday applications. Among the items mentioned are aluminum canoes and truck bodies, windmills for electricity generation, solar collectors for homes, and advanced firefighting equipment, e.g., a radio-controlled nozzle pump, and lighter, more flexible protective clothing for firefighters.

A78-44535 Nonequilibrium processes under conditions of T-layer formation. S S Katsnel'son and V S Slavin (Akademiia Nauk SSSR, Institut Teoreticheskoi i Prikladnoi Mekhaniki, Novosibirsk, USSR) (*Teplofizika Vysokikh Temperatur*, vol 15, Sept-Oct 1977, p 1064-1070) *High Temperature*, vol 15, no 5, Mar 1978, p 899-905 9 refs Translation

The complete system of one dimensional MHD equations is solved in the two-temperature plasma approximation for the formation of a current sheet in a rare-gas plasma flow with a nonuniformly distributed alkali-metal impurity. It is shown that nonequilibrium processes, leading to the detachment of electron temperature, have a significant effect on the dynamics of current sheet formation, and this formation is initiated at the moment of establishment of ionization equilibrium. The theoretical analysis is compared with experimental data on a flow of helium (with initial parameters of 3.2 atm, 3.3 km/sec and 1040 K) in an MHD generator channel. It is

noted that the current sheet effect can be used to raise the energy conversion efficiency of an MHD generator.

A78-44538 Selection of the optimal configuration of the frame and the form of the transverse cross section of a frame-type MHD channel V A Bitiurin and S A Medin (Akademiia Nauk SSSR, Nauchno-Issledovatel'skii Institut Vysokikh Temperatur, Moscow, USSR) (*Teplofizika Vysokikh Temperatur*, vol 15, Sept-Oct 1977, p 1086-1094) *High Temperature*, vol 15, no 5, Mar 1978, p 918-925 6 refs Translation

The variational problem of optimal distribution of current and potential in the cross section plane of a MHD generator channel is solved. In the case of a uniform distribution of velocity and a two-dimensional nonuniformity of distribution of conductivity, the potential distribution on the walls of the optimal channel is linear, i.e., the walls are formed of flat conducting frames. A numerical solution of the direct problem of electrodynamics is used to investigate the effect of the cross section shape of the channel with flat frames on its characteristics. It is shown that channels of elliptical (or circular) cross section are more efficient than channels of rectangular cross section.

A78-44569 Optical and infrared detectors Edited by R J Keyes (MIT, Lexington, Mass.) Berlin and New York, Springer-Verlag (Topics in Applied Physics Volume 19), 1977 316 p \$39.60

The volume is written for those who desire a comprehensive analysis of the latest developments in infrared detector technology and a basic insight into the fundamental processes which are important to evolving detection techniques. The photon detection process is considered along with thermal detectors, photovoltaic and photoconductive infrared detectors, and photoemissive detectors. Attention is also given to charge transfer devices for infrared imaging and aspects of nonlinear heterodyne detection. Charge-coupled devices and nonlinear photon interactions represent new techniques for extracting more information from weak infrared signals.

A78-44572 Photovoltaic and photoconductive infrared detectors D Long (Honeywell Corporate Research Center, Bloomington, Minn.) In *Optical and infrared detectors*.

Berlin and New York, Springer-Verlag, 1977, p 101-147 88 refs

Photovoltaic and photoconductive infrared detectors offer very high detectivities, although they must often be cooled. The continuing improvement of detector performance is related to the development of highly purified, single-crystal semiconductors as their active materials. Aspects of basic theory are examined, taking into account

direct photon detection, photocurrent, gain, responsivity, noise mechanisms, detectivity, response time, and problems of electrical power dissipation. The important photovoltaic detectors use intrinsic photoexcitation. General relations regarding their theory are discussed. Attention is given to suitable photovoltaic infrared detector material, the theory and the materials used in the case of intrinsic photoconductive detectors, and the characteristics of extrinsic photoconductive detectors. G R

A78-44620 Material research with Spacelab. R. Hostenkamp and J. Lorschiedter. *Dornier-Post* (English Edition), no. 2, 1978, p. 54-58.

The materials laboratory in the European Spacelab utilization program will permit experimentation at virtually zero gravity in the fields of metals, laminated materials, glasses, ceramics, and semiconductors. The equipment includes a central control console, consisting of a computer system, a peripheral unit, and a data acquisition system. The central experimental facility is the mirror heating facility, designed primarily for liquid and gas zone pulling of crystals. The mirror furnace uses the geometrical characteristics of an enclosed ellipse of rotation to heat a sample positioned at one focus point by a lamp at the second focus. Details on the operation of this unit are given. P T H

A78-44752 Efficient amplification of a discharge-pumped KrF laser. S. Watanabe, S. Shiratori, T. Sato, and H. Kashiwagi (Ministry of International Trade and Industry, Electrotechnical Laboratory, Tanashi, Tokyo, Japan). *Applied Physics Letters*, vol. 33, July 15, 1978, p. 141-143. 6 refs.

An output energy of 0.75 J has been obtained with a pulse width of 40 ns and an efficiency of 0.8% by using a UV-preionized KrF amplification system. The stored energy in an amplifier has been improved by a factor of about 1.6 by control of self-breakdown voltage with a change of electrode separation. The measured saturation energy for this device was 51 mJ/sq cm corresponding to a KrF saturation intensity of 1.2 MW/sq cm. The small-signal gain coefficient reached 4.3%/cm at a charging voltage of 35 kV. (Author)

A78-44759 * Emitter current suppression in a high-low-junction emitter solar cell using an oxide-charge-induced electron accumulation layer. A. Neugroschel, F. A. Lindholm, S. C. Pao (Florida, University, Gainesville, Fla.), and J. G. Fossum (Sandia Laboratories, Albuquerque, N. Mex.). *Applied Physics Letters*, vol. 33, July 15, 1978, p. 168-170. 17 refs. Research supported by the U.S. Department of Energy and NASA.

A78-44762 Effects of pinholes, oxide traps, and surface states on MIS solar cells. M. A. Green (New South Wales, University, Kensington, Australia). *Applied Physics Letters*, vol. 33, July 15, 1978, p. 178-180. 16 refs. Research supported by the Utah Foundation and Australian Research Grants Committee.

It is shown that the insulating layer in metal-insulator-semiconductor (MIS) solar cells by no means has to be perfect to obtain optimum photovoltaic performance. Oxide pinhole densities as large as 1000/sq cm can be tolerated without degrading the device properties. Large densities of oxide traps at energies close to the majority-carrier band edge in the semiconductor can reduce the cell efficiency as can surface states in nonoptimal devices. Devices optimally designed with an inversion layer at the IS interface are virtually immune to these states; densities in excess of 10 to the 13th/sq cm causing no degradation in properties. (Author)

A78-44875 Magnetohydrodynamic energy for electric power generation. Edited by R. F. Grundy. Park Ridge, N.J., Noyes Data Corp. (Energy Technology Review Series, Volume 20), 1978. 239 p. 77 refs. \$36.

Aspects of Soviet MHD development are considered along with details concerning open-cycle and closed-cycle MHD studies conducted by American companies. Liquid-metal MHD studies performed by American companies are also discussed, taking into account the selection of parametric study points, the study param-

eters, the LM-MHD/steam binary cycle configuration, assumptions, methodology, the results of a parametric study, cost methodology, MHD duct and magnet costs, liquid-metal pumps and subsystems costs, heat transfer equipment costs, the costs of gas compressors and motor drives, steam turbine/generator costs, the sizing and cost algorithm computer program, component installation costs, a comparison of the cost of electricity for a LM-MHD/steam binary power plant, and aspects of cycle description. Hydrogen-oxygen combustion powered steam MHD systems are also examined. G R

A78-44988 # Improving the efficiency of high-temperature power plants (O povyshenii effektivnosti vysokotemperaturnykh energeticheskikh ustanovok). N. A. Minailenko (Akademiia Nauk Ukrainskoi SSR, Institut Tekhnicheskoi Teplofiziki, Kiev, Ukrainian SSR). *Teplofizika i Teplotekhnika*, no. 35, 1978, p. 59-63. 5 refs. In Russian.

It is proposed that the efficiency of high-temperature power plants (i.e., conventional and nuclear gas-turbine plants) can be improved by intensifying radiative heat transfer in heat exchanger channels. This can be done by increasing the absorptivity of the heat-carrying fluid (e.g., helium) through the addition of optimal (minimal) concentrations of minute (0.1-3 microns) graphite particles. A heat-carrying fluid with a minimum concentration of graphite particles is practically a clean gas, which assures reliability operation of the plant. B J

A78-45076 The environment today. R. E. Train (World Wildlife Fund, Washington, D.C.). *Science*, vol. 201, July 28, 1978, p. 320-324.

Consideration is given to various aspects of current environmental research noting energy conservation programs associated with space heating and cooling, automobiles, the industrial cogeneration of steam and electricity, and commercial lighting. Efforts aimed at environmental protection are reviewed with reference to the Clean Air Act, the national energy policy, and the planned World Climate Conference. Water quality projects are described such as waste-treatment procedures for municipal and industrial wastes. The 1976 Toxic Substances Control Act is discussed and prospects for a worldwide system to protect representative ecosystems are presented. S C S

A78-45090 Urban fuel economy - An alternate interpretation of recent computer simulation calculations. L. Evans and R. Herman (GM Research Laboratories, Warren, Mich.). *Transportation Research*, vol. 12, June 1978, p. 163-165. 7 refs.

Estimates of the effect of different traffic control scenarios on vehicular fuel consumption in an urban network were obtained in a recent report using detailed computer simulation. In the present work it is shown that these computer simulation results are consistent with a previously developed model of fuel consumption in urban traffic systems derived by conducting experiments in street traffic. (Author)

A78-45097 * # Fuel consumption improvement in current transport engines. R. W. Hines (United Technologies Corp., Pratt and Whitney Aircraft Group, East Hartford, Conn.) and J. A. Ziemanski (NASA, Lewis Research Center, Cleveland, Ohio). *American Institute of Aeronautics and Astronautics and Society of Automotive Engineers, Joint Propulsion Conference, 14th, Las Vegas, Nev., July 25-27, 1978, AIAA Paper 78-930*. 7 p. 7 refs. Contracts No. NAS3-20630, No. NAS3-20632.

A review is conducted of improvements which can be made with respect to the fuel consumption of current engines and new production versions of current engines. A description is presented of an engine diagnostics program which has the objective to identify and quantify the causes and sources of performance deterioration in the JT9D turbofan engine and to develop basic data which will be applied to minimize performance degradation of current and future engines. General areas where performance losses occur are examined, taking into account seals, blades and vanes, and cases. Potential performance improvement concepts are related to improved compo-

nent aerodynamics, improved flowpath sealing, blade tip clearance control, improved turbine cooling effectiveness, improved turbine materials and coatings, duct and nozzle aerodynamic refinements, nacelle aerodynamic refinements, forced exhaust mixers, advanced nacelle materials, and advanced fuel control G R

A78-45098 * # NASA/General Electric Engine Component Improvement Program A J Albright, D J Lennard (General Electric Co., Cincinnati, Ohio), and J A Ziemianski (NASA, Lewis Research Center, Cleveland, Ohio) *American Institute of Aeronautics and Astronautics and Society of Automotive Engineers, Joint Propulsion Conference, 14th, Las Vegas, Nev., July 25-27, 1978, AIAA Paper 78-929* 7 p Contracts No NAS3-20629, No NAS3-20631

The Engine Component Improvement (ECI) Program has been initiated in connection with projects designed to reduce the impact of the world-wide energy crisis in the area of aviation. The two parts of the ECI program have the overall objective to identify and quantify the sources and causes of CF6 engine performance deterioration, and to reduce the fuel consumption of CF6 engines through the development and the incorporation of various performance improvement concepts. The CF6 high-bypass turbofan engine was selected as a basis for this effort, since it is expected to be a significant fuel user in commercial revenue service for the next 15 to 20 years. The first part of the ECI program represents the initial step in an effort to achieve a goal of five percent reduction in fuel usage for CF6 engines in the 1979-82 time period. The first performance improvement concept selected is an improved efficiency fan blade. Other improvements are related to a short core exhaust system and an improved high pressure turbine G R

A78-45135 # The slagging MHD generator - A parametric study J G Taylor (Sandia Laboratories, Albuquerque, N Mex.), *American Institute of Aeronautics and Astronautics, Fluid and Plasma Dynamics Conference, 11th, Seattle, Wash., July 10-12, 1978, Paper 78-1174* 11 p 11 refs Research supported by the U S Department of Energy

A coal combustion MHD generator is examined to determine the influence of a liquid slag layer which coats the electrode walls. The slag layer is formed by vapor condensation from the gas stream and maintained in equilibrium by shear flow along the wall. Boundary layer theory is applied to give a self-consistent analysis of the core flow, gas phase boundary layer, and liquid slag layer (Author)

A78-45136 * # High temperature solar photon engines A Hertzberg, R Decher, A T Mattick (Washington, University, Seattle, Wash.), and C V Lau (Boeing Commercial Airplane Co., Seattle, Wash.) *American Institute of Aeronautics and Astronautics, Fluid and Plasma Dynamics Conference, 11th, Seattle, Wash., July 10-12, 1978, Paper 78-1177* 32 p 30 refs Grant No NGL-49-002-044

High temperature heat engines designed to make maximum use of the thermodynamic potential of concentrated solar radiation are described. Plasmas between 2000 K and 4000 K can be achieved by volumetric absorption of radiation in alkali metal vapors, leading to thermal efficiencies up to 75% for terrestrial solar power plants and up to 50% for space power plants. Two machines capable of expanding hot plasmas using practical technology are discussed. A binary Rankine cycle uses fluid mechanical energy transfer in a device known as the 'Comprex' or 'energy exchanger'. The second machine utilizes magnetohydrodynamics in a Brayton cycle for space applications. Absorption of solar energy and plasma radiation losses are investigated for a solar superheater using potassium vapor (Author)

A78-45215 To bed betimes W Patterson (Friends of the Earth, Ltd., London, England) *New Scientist*, vol 79, July 20, 1978, p 180, 181

Fluidized bed combustion (which usually takes place at temperatures between 700 and 900 C) is discussed with reference to its potential for energy production in coal-fired systems. It is noted that

even high-sulfur coal may be used without danger to the environment, because the sulfur combines with calcium in the limestone or dolomite ash in the bed to form a precipitate of calcium sulfate. Two types of fluidized beds are described: one which operates at ambient pressure, another which operates at pressures of ten atmospheres or more. Fluidized bed boilers are already in operation, e.g., a 25 MW plant outside Enköping, Sweden, which supplies the town's heating system, with other larger (up to 200 MW) plants either under construction or in the design stage D M W

A78-45245 Wave interaction in a beam-plasma system in presence of dispersion and higher order non-linear effects M Lisak (EURATOM and Chalmers University of Technology, Institute for Electromagnetic Field Theory, Goteborg, Sweden) *Physica Scripta*, vol 17, June 1978, p 577-581 11 refs

The third-order perturbation theory based on the method of multiple scales is applied in order to describe wave interactions in a beam-plasma system. The formalism includes simultaneous effects of dispersion and nonlinearities giving rise to self and mutual interactions. Some traveling wave solutions are obtained in special cases of physical interest (Author)

A78-45251 A practical method for determining wind frequency distributions for the lowest 200 m from routine meteorological data A-S Smedman-Hogstrom and U Hogstrom (Uppsala, Universitet, Uppsala, Sweden) *Journal of Applied Meteorology*, vol 17, July 1978, p 942-954 8 refs Research supported by the National Board for Energy Source Development

A simple model is described which in a crude way considers the effects of variation of terrain characteristics and of stability on the wind profile in the lowest 100 or 200 m of the atmosphere. The model is not primarily intended for giving exact individual profiles but rather for producing statistics of wind speeds at levels in the height range below, say, 200 m. The study is concerned with rural conditions only. The input to the model is routine meteorological data and detailed information on the roughness characteristics as a function of distance and direction relative to the measuring point. The results suggest that the general approach of describing the wind profile in the various internal boundary layers as power laws with exponents characteristic of the origin of the respective boundary layers is basically valid S D

A78-45321 CO2 and spaceship earth S Terra *EPRI Journal*, vol 3, July-Aug 1978, p 22-27

Carbon dioxide concentration in the atmosphere has been steadily increasing (from an estimated 293 ppm before 1860 to about 334 ppm in 1977). Mainly responsible for the increase is the burning of coal, oil, and natural gas as fuel in industrial and commercial applications. It is suggested that the elevated levels of atmospheric CO2 may be leading to a global warming on the order of 2-3 C, a 2% increase in average relative humidity, and 7% higher average rainfall. It is also suggested that the world's forests may be a source rather than a sink for CO2. Scenarios range from a disastrous 5 m rise in the mean sea level, resulting from the melting of the polar caps, to a simple shift of rainfall patterns toward the more populated areas of the northern hemisphere, thus opening up previously arid areas to agriculture and settlement D M W

A78-45365 High-efficiency p(+)-n-n(+)-back-surface-field silicon solar cells J G Fossum and E L Burgess (Sandia Laboratories, Albuquerque, N Mex.) *Applied Physics Letters*, vol 33, Aug 1, 1978, p 238-240 9 refs Research supported by the U S Department of Energy

The design and fabrication of high-efficiency p(+)-n-n(+) back-surface-field silicon solar cells are described. The fabrication process has been developed to yield maximum attainable carrier lifetimes (about 0.7 msec) in the base region of the cell, thereby allowing the back n-n(+) junction to enhance effectively the cell performance. A surprising conclusion drawn from a study of the device physics supporting the experimental development of the cell is that the

front-surface recombination velocity controls the recombination in the emitter. That is, the bulk p(+) emitter is 'transparent' to minority-carrier (electron) flow. The recognition of the significance of the front silicon surface has led to process modifications that result in improvements in both the short-circuit current density and the open-circuit voltage of the cell. With these improvements, the cells exhibit AM1 conversion efficiencies of nearly 17%. The fabrication process is reliable and reproducible with exceptionally high yield. (Author)

A78-45435 * # Medium power voltage multipliers with a large number of stages. W. T. Harrigill and I. T. Myers (NASA, Lewis Research Center, Cleveland, Ohio) *Institute of Electrical and Electronics Engineers, Power Electronics Specialists Conference, Syracuse, N.Y., June 13-15, 1978, Paper 7* p. 13 refs.

Voltage multiplier techniques were extended at medium power levels to larger multiplication ratios. A series of DC-DC converters were built, with from 20 to 45 stages and with power levels up to 100 watts. Maximum output voltages were about 10,000 volts.

(Author)

A78-45453 Thermal regimes in a primary fluid heated by solar energy in a linear collector. O. Barra, M. Conti, L. Corraja, R. Visentin, and E. P. Caratelli (Calabria, Università, Cosenza, Italy) *Nuovo Cimento, Sezione C*, vol. 1 C, Mar.-Apr. 1978, p. 167-184. 15 refs.

The steady-state heat transfer equation has been solved for the determination of temperature profiles in a diathermic oil flowing through a linear boiler placed on the focal line of cylindrical parabolic solar concentrators. Finite-difference methods have been employed to solve the equation, by assuming Nikuradse velocity profiles and available experimental data to supply boundary conditions and to estimate equation parameters. A set of solutions for several physical and geometrical situations is shown and discussed in order to give useful indications on the design of solar power plant.

(Author)

A78-45454 Transient temperature variations in the primary network of a solar power plant. O. Barra, M. Conti, L. Corraja, R. Visentin, and V. Marinelli (Calabria, Università, Cosenza, Italy) *Nuovo Cimento, Sezione C*, vol. 1 C, Mar.-Apr. 1978, p. 185-195. 6 refs.

The energy conservation equations are solved to determine the transient behavior of a solar power plant, made of linear concentrators. The equations are solved by the finite-difference method, assuming typical project parameters and the available experimental data. Different physical and geometrical configurations are considered, the results are shown and discussed in order to supply useful indications for the design of a solar power plant. (Author)

A78-45468 Conditions for near-electrode contraction of a discharge in a combustion-product plasma. A. M. Virnik, N. M. Zykova, T. S. Kurakina, and E. V. Mel'nikov (Akademiya Nauk SSSR, Nauchno-Issledovatel'skii Institut Vysokikh Temperatur, Moscow, USSR) *(Teplofizika Vysokikh Temperatur, vol. 15, Nov. Dec. 1977, p. 1148-1151)* *High Temperature*, vol. 15, no. 6, May 1978, p. 982-986. 12 refs. Translation.

The experiments described were carried out to study the processes occurring at the electrodes of an MHD power generator during the transition from a diffuse to a constricted discharge. The tests were performed with laboratory equipments simulating a combustion product plasma in a space charge layer (flow temperature of 2600 K, conductivity of 1.5 to 9 mho/m). The threshold current density of a diffuse discharge is plotted against the anode temperature and the plasma conductivity. V. P.

A78-45654 Electron heating in channel of nonequilibrium magnetohydrodynamic generators. N. A. Kruzhilin (Akademiya Nauk SSSR, Nauchno-Issledovatel'skii Institut Vysokikh Temperatur, Moscow, USSR) *(Teplofizika Vysokikh Temperatur, vol. 15, Nov. Dec. 1977, p. 1262-1268)* *High Temperature*, vol. 15, no. 6, May 1978, p. 1082-1088. 21 refs. Translation.

In the present paper, available theoretical and experimental data on the properties of discharges in a strong magnetic field are used as a basis to arrive at certain conclusions concerning the calculation of the electron temperature in the channel of a Faraday MHD generator of nonuniform conductivity. It is shown that to calculate Joule dissipation in the channel, it is imperative to take into consideration such experimentally observed phenomena as ionization turbulence and the presence of a mean Hall current. V. P.

A78-45655 Near-cathode region of constricted discharge at MHD-generator metallic electrodes. I. I. Beilis (Akademiya Nauk SSSR, Nauchno-Issledovatel'skii Institut Vysokikh Temperatur, Moscow, USSR) *(Teplofizika Vysokikh Temperatur, vol. 15, Nov. Dec. 1977, p. 1269-1275)* *High Temperature*, vol. 15, no. 6, May 1978, p. 1088-1094. 21 refs. Translation.

The parameters of an arc-discharge spot are studied with allowance of the processes in the cathode plasma, on the basis of a mathematical model that takes into consideration the presence of a film on the electrode surface. It is shown that at mean electrode temperatures above 900 K, the current density in the spot decreases markedly while the spot temperature is hardly affected. An electrode erosion mechanism associated with melting and evaporation of the electrode metal is proposed. The phenomenon of constricted discharge is analyzed for high electrode temperatures. It is shown that for cathode spot parameters characteristic of MHD generators, the arc discharge at a steel electrode (contrary to that at a copper electrode) is thermally unsteady. V. P.

A78-45656 Switching of electrodes in the end zone of a series MHD generator. G. P. Bazarov, E. N. Kufa, and S. A. Medin (Voronezhskii Politehnicheskii Institut, Voronezh, Akademiya Nauk SSSR, Nauchno-Issledovatel'skii Institut Vysokikh Temperatur, Moscow, USSR) *(Teplofizika Vysokikh Temperatur, vol. 15, Nov. Dec. 1977, p. 1276-1283)* *High Temperature*, vol. 15, no. 6, May 1978, p. 1094-1100. 8 refs. Translation.

The influence of the technique of commutating segmented electrodes at the end sections of an MHD channel on the local and integrated characteristics of the power generator is studied. A numerical solution is obtained to the two-dimensional electro-dynamics problem for the end section of a channel carrying a homogeneous flow. An analysis of the integrated characteristics shows that maximum energy conversion efficiency is achieved when short-circuited segmented electrodes are commutated at small angles. The current and potential distributions at the contact of a solid electrode are examined, showing that for any commutation technique, there exists a contact arrangement that eliminates current and voltage buildup at a contact. V. P.

A78-45657 Investigation of the temperature dependence of the electrical conductivity of the working fluid of large MHD generators. N. A. Balashov, I. A. Vasil'eva, I. M. Gaponov, G. P. Maliuzhonok, A. P. Nefedov, V. B. Novosadov, F. M. Oberman, L. P. Proberzhskii, and E. M. Shelkov (Akademiya Nauk SSSR, Nauchno-Issledovatel'skii Institut Vysokikh Temperatur, Moscow, USSR) *(Teplofizika Vysokikh Temperatur, vol. 15, Nov.-Dec. 1977, p. 1284-1293)* *High Temperature*, vol. 15, no. 6, May 1978, p. 1101-1110. 15 refs. Translation.

The paper deals with the results of a joint Soviet-American experiment which was carried out to measure the dependence of the electrical conductivity of the plasma of an open-cycle MHD generator on the temperature, the plasma pressure, the degree of oxygen enrichment, and the amount of ionizable addition. The U-25 and the AVCO Mark VI facilities employed in the experiments are described, along with the respective procedures. An approximate expression is derived which does not require a computer to calculate the electron density, electron mobility, and the electrical con-

ductivity of the combustion-product plasma over the entire range of working-fluid parameters V P

A78-45658 Appearance of interelectrode arcs and electric fluctuations in an MHD channel V I Kovbasiuk, N N Baranov, A D Iserov, and I I Klimovskii (Akademiia Nauk SSSR, Nauchno-Issledovatel'skii Institut Vysokikh Temperatur, Moscow, USSR) (*Teplofizika Vysokikh Temperatur*, vol 15, Nov-Dec 1977, p 1294-1302) *High Temperature*, vol 15, no 6, May 1978, p 1110-1118 21 refs Translation

In the experiments described, the conditions leading to the onset of Hall (electrode) arcs in diagonal MHD channels were studied by recording and analyzing the fluctuations of the electrode potentials. The experiments were carried out with the U-25 facility, employing induced electric fields. It is shown that the onset of Hall arcs (breakdowns) in an induced electric field is accompanied by the onset of high-frequency (on the order of 100 kHz) noise in the spectrum of electrode voltage fluctuations, and that the moment of onset of Hall arcs depends strongly on the Faraday currents to the electrodes and on the magnetic field induction V P

A78-45661 Efficiency of a pulsed Faraday MHD generator in a scheme with a thermonuclear reactor V V Breev, V P Panchenko, and V V Chernukha (Akademiia Nauk SSSR, Institut Atomnoi Energii, Moscow, USSR) (*Teplofizika Vysokikh Temperatur*, vol 15, Nov-Dec 1977, p 1321-1323) *High Temperature*, vol 15, no 6, May 1978, p 1140-1142 Translation

The plasma-generating energy storage system examined in the present paper is composed of a pulsed MHD power generator and a pulsed thermonuclear reactor. The system is quasi-stationary in the sense that its parameters vary in time. The problem of defining the optimal configuration of the MHD channel and the optimal mode of operation is discussed, evaluating the efficiency of the system in terms of the ratio of the electric energy generated to the thermal energy of the source. The pressure, total temperature, current voltage characteristic, and effective conductance at the channel inlet are plotted vs time. It is shown that for operation at an active load the system efficiency may approach 30 percent V P

A78-45735 Performance analysis and cost optimization of a solar-assisted heat pump system J W MacArthur (Honeywell Energy Resources Center, Minneapolis, Minn), W J Palm, and R C Lessmann (Rhode Island University, Kingston, RI) *Solar Energy*, vol 21, no 1, 1978, p 1-9 16 refs

A solar-assisted heat pump system with a conventional backup unit was simulated for a 93-sq-m (1000-sq-ft) house in Rhode Island using quasi-dynamic computer models. The performance of the system as a function of collector area and thermal storage volume was evaluated to determine the fraction of the space heating and domestic hot water load that was supplied by the solar-assisted system. This information was used to compute the payback time, based on cumulative costs, for each variation of the system's parameters when compared to a conventional system. The optimal combination of system components which had a payback time less than the mortgage life was determined. For the given initial costs of solar panels and storage reservoir, this optimal combination was found to be insensitive to the variations in mortgage and fuel cost growth rates presented in this report (Author)

A78-45736 The result of cooling operation of Yazaki Experimental Solar House 'One' T Ishibashi (Yazaki Buhin Co., Ltd, Kosai, Shizuoka, Japan) *Solar Energy*, vol 21, no 1, 1978, p 11-16

The testing of a solar cooling system for a 127-sq-m residence is described. The refrigerating unit is a 6000 kcal/hr compact water lithium bromide absorption unit, the solar collector, heat storage tank, fan coil unit, floor panel heating, cooling tower, and four pumps are characterized, and the Yazaki experimental house design is reported. Data on the relation of total insolation to produced energy, cooling load, temperature parameters, and solar utilization

are presented, and the data are discussed with reference to the design of solar cooling systems for houses M L

A78-45737 Absorption of solar radiation in ponds. R Viskanta (Purdue University, West Lafayette, Ind) and J S Toor (Science Applications, Inc., La Jolla, Calif) *Solar Energy*, vol 21, no 1, 1978, p 17-25 29 refs

Analysis is presented to predict the local rate of solar energy absorption in a pond using the radiative transfer theory. The physical model considers absorption and scattering by the water and internal reflection of radiation from the air-water interface as well as the bottom. A forward scattering approximation and a discrete-coordinate approximation of the radiative transfer equation are discussed. Numerical results for the local volumetric rate of solar energy absorption in the water are presented in the paper for a range of parameters of physical interest. The effects of the directional distribution of solar radiation incident on the water surface, the attenuation of solar radiation by the atmosphere during the diurnal cycle and the modification of the spectral radiation characteristics of water by impurities and additives on the absorption and distribution of the absorbed energy in the pond are investigated (Author)

A78-45739 PVSS - A photovoltaic system simulation program L H Goldstein and G R Case (Sandia Laboratories, Albuquerque, N Mex) *Solar Energy*, vol 21, no 1, 1978, p 37-43 7 refs

A computer program has been developed to accurately simulate the performance of a photovoltaic system. Sixteen configurations can be simulated, including systems with combinations of battery storage, inverters, d.c.-voltage regulators and maximum power point trackers. Models are presented for system components, and sample runs illustrating various aspects of program performance are described (Author)

A78-45740 A solar-assisted heat pump system for heating and cooling residences B W Tleimat and E D Howe (California University, Berkeley, Calif) *Solar Energy*, vol 21, no 1, 1978, p 45-54 6 refs

It is proposed that heating and cooling of the all-electric residence unit be accomplished by using a solar-assisted heat-pump system. This system would make use of a conventional air-conditioning unit which would be modified by fitting controls to reverse the flow of refrigerant for the heating mode and by changing the outdoor heat exchanger from refrigerant-to-air to refrigerant-to-water. The system would also require a solar collector and two insulated water-storage tanks. The system is described, and the energy output and costs are calculated. It is concluded that the solar-assisted heat-pump system with current fuel prices can provide immediate economic benefit over the all-electric home and is, possibly on par with residences using fuel or liquefied petroleum gas, but would cost more than systems using natural gas M L

A78-45741 Determining typical weather for use in solar energy simulations W R Petrie (Clark University, Worcester, Mass) and M McClintock (Boston University, Boston, Mass) *Solar Energy*, vol 21, no 1, 1978, p 55-59 10 refs

The use of simulation methods to predict the performance of a solar energy system is considered. The paper describes a method of analyzing an optional number of years of weather data for a chosen month resulting in a 'typical week' which is characterized in terms of solar radiation, ambient dry bulb temperature, and wind speed. The 'typical week' is allowed to vary in length between 5 and 10 days in the analysis in order to enable selection of a period that best represents a given month. A comparative computer analysis is used to verify the method; the differences between the averaging method and the 'typical' weather method are less than 7%, and the 'typical' method requires less computer time M L

A78-45742 Eutectic mixtures for solar heat storage N Yoneda and S Takanashi (Tokyo, Science University, Noda, Japan) *Solar Energy*, vol 21, no 1, 1978, p 61-63 11 refs Research supported by the Iwtani Naoki Foundation

Several inorganic eutectic mixtures which have melting points in a range most suitable for solar heat storage and which have high heats of fusion were investigated. Thermodynamic properties of $\text{LiNO}_3\text{-NH}_4\text{NO}_3\text{-NH}_4\text{Cl}$, $\text{LiNO}_3\text{-NH}_4\text{NO}_3\text{-NaNO}_3$, $\text{LiNO}_3\text{-NH}_4\text{NO}_3\text{-KNO}_3$, $\text{Mg(NO}_3)_2\cdot 6\text{H}_2\text{O-MgCl}_2\cdot 6\text{H}_2\text{O}$, and $\text{Mg(NO}_3)_2\cdot 6\text{H}_2\text{O-MgBr}_2\cdot 6\text{H}_2\text{O}$ are reported. Supercooling, corrosion, and other problems associated with practical application of the eutectic mixtures are examined, the heat content of one system is calculated, and the costs per kilojoule are estimated. M I

A78-45743 Units and symbols in solar energy W A Beckman, J A Duffie (Wisconsin, University, Madison, Wis.), J W Bugler (Capricornia Institute of Advanced Education, Rockhampton, Australia), P I Cooper, R V Dunkle (Commonwealth Scientific and Industrial Research Organization, Melbourne, Australia), P E Glaser (Arthur D Little, Inc., Cambridge, Mass.), T Horigome (Ministry of International Trade and Industry, Electrotechnical Laboratory, Tokyo, Japan), T A Lawand (McGill University, Montreal, Canada), E D Howe, and P L Van der Mersch. *Solar Energy*, vol 21, no 1, 1978, p 65-68

The application of SI units to some common solar energy quantities is discussed, and some interpretations are recommended for particular cases. The new system of units is based on metric quantities but is not the same as any previous system of metric units, in other words, both metric and imperial units must be changed to conform to the new system. SI units for energy, power, force, pressure, velocity, flow, and temperature are described, and lists of recommended symbols for material quantities, sun and related angles, miscellaneous quantities, subscripts, and radiation quantities are presented. M I

A78-45830 # Heat transfer in wicks of low-temperature heat pipes (Теплообмін у гнотакх низ'котемпературних теплових труб) V I Tolubinskii, V O Antonenko, Iu M Ostrovs'kii, and E M Shevchuk (Akademiia Nauk Ukrain's'koi RSR, Institut Tekhnichnoi Teplofiziki, Kiev, Ukrainian SSR) *Akademiia Nauk Ukrain's'koi RSR, Dopovidy, Seriya A - Fiziko-Matematichni ta Tekhnichni Nauki*, May 1978, p 466-470. 5 refs. In Ukrainian.

Experiments were conducted to study heat transfer in liquid-saturated metal wicks in low-temperature heat pipes. The cooling liquids used were distilled water at pressures of 0.1-0.4 MPa and butyl alcohol, normal heptane, benzene and acetone at atmospheric pressure. 35 types of porous capillary wick structures were tested. Visualization experiments disclosed no boiling in the wick, but only evaporation of the liquid from the free surface of the meniscus. The evaporation is accompanied by the removal of liquid drops. The mechanism of this process is discussed and, as an illustration, attention is given to the dependence of the heat transfer coefficient on heat flux density for a perforated nickel wick and distilled water at a pressure of 0.4 MPa. B J

A78-45902 # Is Europe's space power technology competitive J J Capart (ESA, Spacecraft Power Supplies Div., Noordwijk, Netherlands) *ESA Bulletin*, no 12, Feb 1978, p 56-61.

The evolution of spacecraft power systems and design requirements are discussed in terms of European development objectives. The economics of European power-system development is examined with attention to the limited scope of research and development possibilities, market considerations, and prospects for reductions in hardware costs. The technology of solar arrays, batteries, and power conditioning is considered, and mass, payload, and photovoltaic requirements are described. M L

A78-45914 Effect of economic development on climate (L'influence du développement économique sur le climat) R Gibrat. *La Météorologie*, Mar 1978, p 5-28. 44 refs. In French.

The paper discusses the problem of the effect on world climate of carbon dioxide gas emissions and thermal waste emissions, and then examines a proposal for using the world's deep ocean waters as a solution to the problem of disposal of CO₂ and thermal emissions. Various past estimates of the contribution by man to fluctuations in

climate, both for the present and extrapolated to the future, are examined. The idea of direct introduction of CO₂ into deep waters, due to Marchetti, is studied. The use of deep waters as a cold water source calls for deeper understanding of ocean variability and the formation of deep waters. P T H

A78-45917 Simplified two-state Markov meteorological model - The Odeillo example (Modèle Markovien simplifié de météorologie à deux états - L'exemple d'Odeillo) R Lestienne. *La Météorologie*, Mar 1978, p 53-64. 5 refs. In French.

A simple meteorological model is developed, where the succession of days is regarded as a Markov chain of two states 'good weather' and 'bad weather'. A day's weather is classified as good or bad according as the ratio of length of time during which the sun shines to the maximum possible it could shine that day is greater or less than 50 percent. The model reproduces satisfactorily most of the features of the phenomena considered, especially the proportion of good weather days and bad weather days and the distribution of lengths of sequences of the same type. The model confirms the importance of correlations between successive days which must be taken into account in predictions of yield and storage requirements of solar power generating plants. P T H

A78-45946 Fluorescent solar energy collectors - Operating conditions with diffuse light A Goetzberger (Fraunhofer-Gesellschaft zur Förderung der angewandten Forschung, Institut für angewandte Festkörperphysik, Freiburg im Breisgau, West Germany) *Applied Physics*, vol 16, Aug 1978, p 399-404. 6 refs. Research supported by the Bundesministerium für Forschung und Technologie.

The fluorescent energy conversion principle using several sheets of transparent material doped with fluorescent molecules to concentrate radiation is extended to include diffuse radiation. Two cases are treated here: diffuse radiation only and a composite spectrum consisting of 40% direct and 60% diffuse radiation simulating the average illumination of a flat exposure in central Europe. In both cases photovoltaic conversion efficiency is significantly higher than with the AM1 spectrum. This is due to the blue shift and narrow shape of the diffuse spectral distributions. With realistic boundary conditions the theoretical conversion efficiency is 1.56 times higher than for the AM1 case. The highest theoretical conversion efficiency is now 38%. (Author)

A78-46023 Elemental particle-size emissions from coal-fired power plants - Use of an inertial cascade impactor J M Ondov, R C Ragani, and A H Biermann (California, University, Livermore, Calif.) *Atmospheric Environment*, vol 12, no 5, 1978, p 1175-1185. 27 refs. Contract No. W-7405-eng-48.

Coal-fly-ash particles collected on coated and uncoated impactor substrates were analyzed by scanning electron microscope techniques in combination with instrumental neutron activation analysis to verify the sizes and elemental composition of collected particles. The results were used to estimate the significance of bounce-off and reentrainment onto back-up filters and to evaluate wall and interstage losses for the University of Washington MK III Source Test Cascade Impactor. Particles were analyzed for a total of 39 elements. Characteristics of particles collected downstream from an electrostatic precipitator and of particles collected on back-up filters are described. Wall and interstage losses of most elements were estimated to be about 40% of mass. A wet scrubber and coated impactor substrates did not greatly reduce bounce-off and reentrainment of small wet particles. M L

A78-46025 An observation of cooling tower plume effects on total solar radiation E Ryznar (Michigan, University, Ann Arbor, Mich.) *Atmospheric Environment*, vol 12, no 5, 1978, p 1223, 1224. 5 refs. Research supported by the Consumers Power Co.

Measurements of total solar radiation were made on 7 March 1977. The sky was cloudless but a cooling tower plume occasionally came between the sun and the pyranometer that was used. These measurements resulted in values that were greater than those expected with a cloudless sky. It is likely that reflections from the

plume, whose average position was slightly north of an imaginary sun-pyranometer line, were responsible (Author)

A78-46028 Mathematical modelling of dispersion and chemical reactions in a plume - Oxidation of NO to NO₂ in the plume of a power plant O T Melo (Ontario Hydro Research Laboratories, Toronto, Canada), M A Lusis (Department of the Environment, Atmospheric Environment Service, Downsview, Ontario, Canada), and R D S Stevens (Ontario Ministry of the Environment, Toronto, Canada) *Atmospheric Environment*, vol 12, no 5, 1978, p 1231-1234 24 refs

A78-46051 Visual impact of plumes from power plants - A theoretical model D A Latimer and G S Samuelsen (California, University, Irvine, Calif) *Atmospheric Environment*, vol 12, no 6-7, 1978, p 1455-1465 25 refs

The impact of emissions on the visibility and esthetic qualities of the existing environment is an important issue in the evaluation of the environmental effects of power plants. The reported investigation has the objective to present and to illustrate the use of a mathematical model for predicting the visual impact of emissions from a power plant based on a knowledge of expected pollutant emission rates and the visual effects of the pollutants. The model is based on the physics of light scattering and absorption but differs from previous models in two key aspects. First, the present model predicts both the impact of the plume on visual range and the color and appearance of the plume. Second, the present work takes into account wavelength-dependent light scattering, scattering and absorption, size distribution and density of fly ash, chemical conversion of nitric oxide to nitrogen dioxide, formation of sulfates and nitrates, and observer-plume geometry G R

A78-46069 A resonating transducer for the utilization of sea wave energy. E Taschdjian *Energy Communications*, vol 4, no 4, 1978, p 393-404 5 refs

A device for the utilization of the energy of sea waves is described, consisting essentially of a narrowing channel, a swimmer, a magnetized lever and a set of transducing wires. The whole arrangement is modelled upon and is analogous to the structure and function of the mammalian ear. It is proposed that the electricity produced, after rectification, be used locally for the electrolysis of sea water (Author)

A78-46119 Advances in and prospects for the development of solar power generation in the USSR S A Azimov (*Geliotekhnika*, no 5, 1977, p 3-8) *Applied Solar Energy*, vol 13, no 5, 1977, p 1-5 Translation

The article presents a broad survey of the development of solar power engineering in the USSR. Attention is given to regional programs utilizing solar energy for various everyday tasks, the construction of solar-heated dwellings, the development of solar distillers, and the construction of solar furnaces. Plans for building solar power stations are reviewed as are projects for the automatic transformation of solar into mechanical energy using the Stirling engine or Rankine cycles. Plans for the generation of energy from solar power using conical and cylindrical concentrators and Fresnel mirrors are proposed. Particular consideration is given to research in solar energy as applicable to agricultural projects SCS

A78-46120 Development and application of the moiré method in solar engineering problems. Iu K Shcherbakov and L P Tairova (Moskovskoe Vyshee Tekhnicheskoe Uchilishche, Moscow, USSR) (*Geliotekhnika*, no 5, 1977, p 9-17) *Applied Solar Energy*, vol 13, no 5, 1977, p 6-12 10 refs Translation

Consideration is given to the moiré method as applied to measuring the angles of rotation of normals and the curvature of reflecting surfaces of solar engineering apparatus. Various procedures for visualizing moiré maps are discussed with reference to circular and hexagonal film facets. The results indicate that the proposed method is effective for defining the characteristics of flexible concentrators having various types of supports, two-dimensional

laminar reflectors of various forms, and for the form control of reflecting surfaces during their manufacture and use SCS

A78-46121 Comparative analysis of models of irradiance field formation in wide aperture-optical systems I V Baum and S O Mamedniyazov (Akademiya Nauk Tadzhikskoi SSR, Fiziko-Tekhnicheskii Institut, Dyushambe, Tadzhik SSR) (*Geliotekhnika*, no 5, 1977, p 26-36) *Applied Solar Energy*, vol 13, no 5, 1977, p 19-26 14 refs Translation

The article briefly discusses the development of wide-aperture optical systems used for concentrating radiated streams, and employed in devices such as optical furnaces with artificial sources, high-temperature solar furnaces, and parabolic reflectors in radio-telescopes. A comparative analysis is presented of various models of the irradiance fields of such wide-aperture optical systems. The analysis is based on mathematical calculations of the primary radiation source characteristics, concentrator parameters, and the thermal regimes of the receiver SCS

A78-46122 Equalization of irradiation field on receiver surface. I V Baum and S O Mamedniyazov (Akademiya Nauk Tadzhikskoi SSR, Fiziko-Tekhnicheskii Institut, Dyushambe, Tadzhik SSR) (*Geliotekhnika*, no 5, 1977, p 37-43) *Applied Solar Energy*, vol 13, no 5, 1977, p 27-32 Translation

For many types of equipment based on radial heating, the homogeneity of the irradiance field of solar concentrators has been emphasized. The article presents a computational procedure for evaluating the homogeneity of irradiance fields on the surface of two-dimensional receivers. Consideration is also given to losses in boundary homogeneity caused by the finite angular dimensions of the source SCS

A78-46123 Evaluation of deformation technique for forming solar concentrator reflecting surfaces. R A Zakhidov, Iu A Dudko, O P Petrosov, G S Zmener, and L A Dubrovskii (Akademiya Nauk Uzbekskoi SSR, Tsentral'noe Proektno-Konstruktorskoe i Tekhnologicheskoe Biuro Nauchnogo Priborostroeniya, Uzbek SSR) (*Geliotekhnika*, no 5, 1977, p 44, 45) *Applied Solar Energy*, vol 13, no 5, 1977, p 33, 34 Translation

A78-46124 On the role of macrorelief of semiconductor branches during their commutation in thermoelements E A Malygin and M P Kozorezov (Voronezhskii Politehnicheskii Institut, Voronezh, USSR) (*Geliotekhnika*, no 5, 1977, p 46-48) *Applied Solar Energy*, vol 13, no 5, 1977, p 35-37 Translation

A study is made to determine the dependency of the mechanical strength of a semiconductor on the degree of roughness of its branches. Low-temperature thermoelectric materials based on Bi, Se, Te, and Sb are considered. The branches were formed by a technique of compression followed by annealing. Geometrical impurities of the backing are found to significantly influence nucleation during condensation. Two types of impurities are identified: macroscopic and microscopic. Using microphotographs and corresponding profilograms, the influence of macrodefects on the surface of semiconductor branches is studied SCS

A78-46125 Classification of wind and solar power plant output regulation modes R B Salieva (Tashkentskii Elektrotekhnicheskii Institut Sviazi, Tashkent, Uzbek SSR) (*Geliotekhnika*, no 5, 1977, p 49-60) *Applied Solar Energy*, vol 13, no 5, 1977, p 38-47 14 refs Translation

Consideration is given to monitoring the productivity of wind and solar power stations on daily, seasonal, and many-year bases. Methods for calculating the parameters of wind and solar energy collectors are proposed, noting those based on data gathered over many years, and those based on statistics and probability. The conditions under which each of the methods may be used are identified SCS

A78-46126 Polyurethane foam solar energy concentrator resistance to climatic influences B A Bazarov, A G Dement'ev, and B A Kalinin (Akademiia Nauk Tadzhikskoi SSR, Fiziko-Tekhnicheskii Institut, Dyushambe, Tadzhik SSR, All-Union Scientific Research Institute of Synthetic Resins, USSR) (*Geliotekhnika*, no 5, 1977, p 67-71) *Applied Solar Energy*, vol 13, no 5, 1977, p 53-56 8 refs Translation

A78-46127 Intermittent-operation absorption solar refrigerator A T Vakhidov and T M Maksudov (Akademiia Nauk Uzbekskoi SSR, Fiziko-Tekhnicheskii Institut, Tashkent, Uzbek SSR) (*Geliotekhnika*, no 5, 1977, p 76-78) *Applied Solar Energy*, vol 13, no 5, 1977, p 60-62 8 refs Translation

A study is made of an absorption solar refrigerator based on a liquid. Particular attention is given to a model solar refrigerator having periodic operation and using ammonia as a cooling agent and water as an absorber. It is found that the apparatus' thermal inertia is a function of heat capacity, generator-absorber mass, and the ammonia-water solution. A numerical procedure is derived for determining the necessary amount of this solution, and optimal concentrations are given for various times of the year. S.C.S.

A78-46128 Structure of beam reflected by heliostat V K Baranov (*Geliotekhnika*, no 6, 1977, p 3-10) *Applied Solar Energy*, vol 13, no 6, 1977, p 1-6 Translation

If a heliostat is situated at a considerable distance from the illuminated target, the structure of the reflected beam will be considerably different from that of the original solar beam. It is shown that for a heliostat-target distance of about 107 times the diameter of the heliostat aperture, there will be a central zone in the form of a convergent cone within which the flux density is uniform and varies little from the flux incident on the reflector. Further on there is a stretch, the central zone of which has the form of a divergent cone, where the flux density decreases with the square of the distance from the reflector. P.T.H.

A78-46130 Technological evolution of the quality of facets produced by deformational forming R A Zakhidov, Iu A Dudko, and L A Dubrovskii (Akademiia Nauk Uzbekskoi SSR, Tsentral'noe Proektno-Konstruktorskoe i Tekhnologicheskoe Biuro Nauchnogo Priborostroeniia, Uzbek SSR) (*Geliotekhnika*, no 6, 1977, p 19-22) *Applied Solar Energy*, vol 13, no 6, 1977, p 13-15 Translation

A mixed numerical-experimental method of evaluating the quality of the facets of solar concentrators is proposed. The method is such that the quality of a facet, by which is meant principally the concentrating power of the facet, can be estimated during the development of a processing method. Hence it is based on results of local monitoring of the concentrating power, with comparisons being made with calculations for an ideal concentrator. P.T.H.

A78-46131 Automatic control of tower-type solar power station optical system /Survey/ A M Khalykov and R R Aparisi (Gosudarstvennyi Nauchno-Issledovatel'skii Energeticheskii Institut, Moscow, USSR) (*Geliotekhnika*, no 6, 1977, p 23-31) *Applied Solar Energy*, vol 13, no 6, 1977, p 16-22 14 refs Translation

Two possible schemes for controlling the mirror reflectors (heliostats) of the optical concentrator of a solar power station using the concept of a solar tower are outlined. The two schemes call for individual control and centralized control, respectively, of the system of heliostats. In the former concept, each heliostat has its own servosystem providing independent angular displacement. The latter concept, suited for large systems, incorporates into an individual control system the possibility of feedback and monitoring control. P.T.H.

A78-46132 Photoelectric radiation densitometer B A Bazarov, Kh Bazarov, and D S Strebkov (Akademiia Nauk Turkmeniskoi SSR, Fiziko-Tekhnicheskii Institut, Ashkhabad, Turkmen SSR) (*Geliotekhnika*, no 6, 1977, p 32-34) *Applied Solar Energy*, vol 13, no 6, 1977, p 23-25 Translation

A method allowing measurement of radiation flux at any point of a region with high flux density is described. The sensitive element is a high-voltage matrix photocell. Several of these devices are displaced through the focal region of a concentrator at a velocity not exceeding the velocity corresponding to the maximal critical frequency of the p-n junctions of the photocells. If the energy flux exceeds 100,000 V/sq m, the matrix photocells are cooled in a quartz tube filled with circulating water. P.T.H.

A78-46135 Study of the physical and chemical processes in fabricating reflectors from polymer materials O Iu Sobrov, A M Gafurov, S N Vil'kova, and G Ia Umarov (Akademiia Nauk Uzbekskoi SSR, Fiziko-Tekhnicheskii Institut, Tashkent, Uzbek SSR) (*Geliotekhnika*, no 6, 1977, p 44-49) *Applied Solar Energy*, vol 13, no 6, 1977, p 33-37 Translation

The study concerns the physicochemical processes involved in the formation of a strong bond between the coating material and the reflecting surface of a foam-film solar concentrator. Attention is given to (1) formation of contact, i.e., physical approach of the molecules of the vapor-deposited polymers and the substrate to the proper distance for chemical reaction, (2) activation and chemical interaction of the molecules, leading to a strong bond, (3) film formation, and (4) relaxation processes such as recrystallization, heterodiffusion, new phase formation, etc., which can either enhance or diminish the bond strength. The change in the contact surface during coalescence of like particles is analyzed, and the relation between temperature, viscosity and surface tension of the material is examined. Optimal process parameters are determined. P.T.H.

A78-46136 Influence of heat treatment on solar energy collector optical properties A A Fattakhov, Sh A Faiziev, U Kh Gaziev, and V S Trukhov (Akademiia Nauk Uzbekskoi SSR, Fiziko-Tekhnicheskii Institut, Tashkent, Uzbek SSR) (*Geliotekhnika*, no 6, 1977, p 50, 51) *Applied Solar Energy*, vol 13, no 6, 1977, p 38, 39 8 refs Translation

A78-46137 Thin-film black-and-white coatings for solar energy collectors V V Li, Sh A Faiziev, U Kh Gaziev, and V S Trukhov (Akademiia Nauk Uzbekskoi SSR, Fiziko-Tekhnicheskii Institut, Tashkent, Uzbek SSR) (*Geliotekhnika*, no 6, 1977, p 52-55) *Applied Solar Energy*, vol 13, no 6, 1977, p 40-42 8 refs Translation

The paper describes the development of a high-temperature selective coating for solar receivers using SiO₂ and CeO₂ for the dielectric layers and a thin film of molybdenum as the metallic layer. Three different materials were used for the substrates: stainless steel, glass covered by an aluminum film, and molybdenum foil. The thicknesses of the metallic and dielectric layers were optimized experimentally. From transmission and reflection curves it was determined that the optimal thickness of the molybdenum film is 250-300 Å. By using two-layer antireflection coatings it was possible to raise the absorption coefficient to 0.85-0.9. When molybdenum foil or Al-coated glass are used as substrate, the integral radiation coefficient is lowered to 0.06-0.1. P.T.H.

A78-46138 Calculation of cylindrical pebble-bed hothouse heat accumulator gasdynamic resistance B Khairtdinov, T A Sadykov, and A B Vardnashvili (Akademiia Nauk Uzbekskoi SSR, Fiziko-Tekhnicheskii Institut, Tashkent, Karshinskii Gosudarstvennyi Pedagogicheskii Institut, Karshi, Uzbek SSR) (*Geliotekhnika*, no 6, 1977, p 73-75) *Applied Solar Energy*, vol 13, no 6, 1977, p 59-61 8 refs Translation

The paper describes an empirical method of determining the hydraulic resistance of an underground heat accumulator consisting

of a cylinder filled with pebbles and wrapped in a transparent polyethylene film. The method is based on measuring the flow rate of water through the accumulator at various pressures. The dependence of hydraulic pressure on Reynolds number is determined. The results can be transferred to the case of air in order to determine the proper power of the fan. P T H

A78-46184 Axial feedback stabilization of flute mode in a multiple mirror. S L Wong and M A Lieberman (California, University, Berkeley, Calif.) *Plasma Physics*, vol 20, May 1978, p 403-408. 14 refs. NSF Grant No. ENG-75-02709, Contract No. E(04-3)-34-PA-215.

Experimental results are reported for axial feedback stabilization by line-tying the $p = 1$ flute mode in a multiple-mirror plasma where the growth rate greatly exceeds the rotation frequency. A seven-cell multiple-mirror configuration was used and in steady state the plasma was produced by constant ionization of lithium vapor on a tungsten plate at nominally 2500 K. Plasma density ranged from 10 to the 10th/cu cm near the hot plate to 10 to the 9th/cu cm near the endwall. Langmuir probes biased to -12 volts were used to sense the plasma perturbation at the edge and in the center of the plasma. It was found that the $p = 1$ flute mode is developed in the absence of feedback. The gain amplitude versus the phase angle is plotted for a 600-microsec confinement time during which the plasma decays to 90% of the original level. S C S

A78-46185 Beta-dependence of the particle and energy confinement times in the low collisionality regime in toroidal systems. R M O Galvão (Campinas, Universidade Estadual, Campinas, São Paulo, Brazil) *Plasma Physics*, vol 20, May 1978, p 409-414. 6 refs. Research supported by the Financiadora de Estudos e Projetos, Conselho Nacional de Pesquisas Grant No. 8271/75.

A78-46194 The theoretical energy conversion efficiency of a high temperature fuel cell based on a mixed conductor. D S Tannhauser (Technion - Israel Institute of Technology, Haifa, Israel) *Electrochemical Society, Journal*, vol 125, Aug 1978, p 1277-1282. 7 refs. Research supported by the National Council of Research and Development of Israel and Kernforschungsanlage Jülich.

We have calculated the voltage vs current characteristic and the energy conversion efficiency of a fuel cell based on a mixed ionic-electronic conductor. The transport equations for the electrolyte are solved exactly and the material parameters which determine the shape of the characteristic are determined. The equations are then applied to the special case of doped ceria, which becomes a mixed conductor only at low oxygen pressures. We then show that for the purpose of efficiency calculations, the finite but small ratio of ionic to electronic mobility valid for ceria can be safely taken as zero, and we compare the resulting simple equations with the equivalent circuit approach to a fuel cell. The characteristic is found to be curved instead of being a straight line and for typical operating conditions the best energy conversion efficiency is, for the transport theory approach, 50% higher than for the equivalent circuit one. We conclude from the calculated new values of conversion efficiency that the equivalent circuit underestimates the conversion efficiency of a mixed conductor seriously and that doped ceria as a solid electrolyte is a more serious contender to doped zirconia than believed up to now. A78-46196 The possibility of black zinc oxide as spectrally selective coating for low temperature solar collectors. M van der Leij (Delft, Technische Hogeschool, Delft, Netherlands) *Electrochemical Society, Journal*, vol 125, Aug 1978, p 1361-1364. 9 refs.

The best spectrally selective surface, taking into account corrosion resistance and thermal and UV stability, appears to be zinc oxide on polished leaf-zinc prepared by anodic treatment of the substrates in a solution containing 30 g/l NaOH, 20 g/l NaNO₃, and 5 g/l NaClO₂ at 40 C bath temperature with 20 (ac) A/sq dm for 1 min or slightly longer treatment time. The present paper describes the preparation of this spectrally selective coating for low temperature solar collectors, and presents results of optical measurements (in the

0.35-2.5 micron range), and discusses the effects of temperature and UV aging. Normal hemispherical spectral reflectivity curves for the coating are presented. R J

A78-46279 # Study of the thermophysical characteristics of cryogenic heat pipes with a metallic fibrous wick (Issledovanie teplofizicheskikh kharakteristik kriogenykh teplovyykh trub s metallovoloknistym fitilem) M G Semena and A I Levterov (Kievskii Politehnicheskii Institut, Kiev, Ukrainian SSR) *Inzhenerno-Fizicheskii Zhurnal*, vol 35, July 1978, p 48-53. 11 refs. In Russian.

The experiments described were carried out to study the thermophysical characteristics of liquid-hydrogen heat pipes with fibrous stainless steel and copper wicks. The temperature fields and critical heat fluxes are determined as a function of heat-transfer-agent excess and heat-pipe angle of inclination. The influence of the thermophysical properties of the working fluid and transport properties of the wicks on heat pipe performance is investigated. It is shown that heat pipes of this type exhibit excellent heat transfer characteristics. V P

A78-46369 Assessing coal conversion processes. J T Talty (National Institute for Occupational Safety and Health, Cincinnati, Ohio) *Environmental Science and Technology*, vol 12, Aug 1978, p 890-894. 7 refs.

Consideration is given to the health hazards associated with coal conversion processes. The available coal-gasification unit operations, coal-liquefaction processes, and gas-liquor treatment techniques are identified. Procedures are suggested for the collection and analysis of samples and for air monitoring at various workplaces. Specific areas for research and development are discussed, including studies of trace elements in coal-conversion plants, volatiles occurring in cooling water through leakage, the composition of purge streams, and the leachability of inorganic materials from coal ash. S C S

A78-46371 Fluidized-bed combustion of coal with lime additives - Catalytic sulfation of lime with iron compounds and coal ash. R T Yang, M S Shen, and M Steinberg (Brookhaven National Laboratory, Upton, N Y) *Environmental Science and Technology*, vol 12, Aug 1978, p 915-918. 19 refs. Contract No. EY-76-C-02-0016.

A78-46443 Amorphous silicon as a selective absorber of solar energy - A spectral emissivity study. J O White (California Institute of Technology, Pasadena, Calif.), T R Kirst, and J Tauc (Brown University, Providence, R I) *Applied Optics*, vol 17, Aug 1, 1978, p 2427-2430. 8 refs. NSF Grant No. DMR-76-17443.

A method for the measurement of the thermal emissivity of films on substrates and for the subsequent determination of the optical constants is described. It is applied to sputtered amorphous silicon films on sapphire substrates. The results, obtained in the 3-6.3 micron spectral range and at 400-800 C, confirm the existence of residual ir absorption in this region with an absorption coefficient on the order of 100. (Author)

A78-46444 * Solar concentrating properties of truncated hexagonal, pyramidal and circular cones. D G Burkhard, G L Strobel (Georgia, University, Athens, Ga), and D L Shealy (Alabama, University, Birmingham, Ala) *Applied Optics*, vol 17, Aug 1, 1978, p 2431-2449. Research supported by the University of Georgia, Contract No. NAS8-32149.

The solar concentrating properties of specularly reflecting truncated pyramidal, hexagonal, and circular cones are evaluated. Pyramidal and hexagonal configurations are discussed with reference to the concentration factor as a function of half apex angle and the length of the side over the width, and to the irradiance distribution. Expressions are derived for the concentration factor and the irradiance at the base of a circular cone when the sunlight is incident normal to the aperture and for oblique incidence. S C S

A78-46446 Effect of finite conductivity on vertical stability of a tokamak plasma column with a noncircular cross section without conducting shell. K Sakurai, T Okuda (Nagoya University, Nagoya, Japan), and Y Tanaka (Japan Atomic Energy Research Institute, Tokyo, Japan) *Electrical Engineering in Japan*, vol 97, July-Aug 1977, p 15-19 9 refs Translation

A78-46474 Research challenge - Clean energy from coal. B. R. Cooper (West Virginia University, Morgantown, W Va) *Physics Today*, vol 31, Aug 1978, p 32-39 22 refs

Research approaches to reducing pollution from coal combustion are discussed. Techniques for analyzing coal are considered, procedures for removing impurities from coal are examined, and the use of catalysts is surveyed. Coal-fired MHD power generation is described with attention to problems caused by erosion and corrosion. The effect of the use of coal on the environment is examined. Problems associated with an increase in atmospheric CO₂ levels are considered, and the need for innovative mining techniques is explained. M L

A78-46488 The employment of the X-ray fluorescence radioisotope technique for the determination of sulfur in fuel oils (L'impiego della tecnica XRF radioisotopica per la determinazione dello zolfo negli oli combustibili). M Salmi (Calabria, Università, Cosenza, Italy), L Storelli (Roma, Università, Roma, Italy), and F Vicinanza (Metronik, Rome, Italy) *Inquinamento*, vol 20, May 1978, p 41-43 6 refs In Italian

The determination of the sulfur content in fuel oils is important in connection with an evaluation of the amount of air pollution due to sulfur dioxide which might be caused as a consequence of the use of the fuel. Conventional standard techniques of analysis are too complex for routine and line controls of the fuel, and a simple analysis procedure is needed. A description is presented of a radioisotope X-ray fluorescence technique which satisfies the requirements for such a rapid and simple analysis method. The conventional analytical standard methods for the determination of sulfur concentration are also discussed. G R

A78-46490 Fiat has presented at Basel its proposal in the field of recycling (La Fiat ha presentato a Basilea la sua proposta nel campo del riciclo). *Inquinamento*, vol 20, May 1978, p 83-87 In Italian

The paper describes the Totem (Total Energy Module) system which is based on the use of a Fiat 127 motor to produce heat for water heating and electric energy from the combustion of methane, alcohol, commercial gas, or other fuel. The gas generated by the fermentation of domestic, agricultural, or industrial wastes would be a suitable fuel. A unit would be capable of simultaneously producing 15 kW and 33,000 kcal/hr, and if the equivalent of 50,000 kcal/hr of methane is consumed, only 10 percent of the heat would be lost. The noise level can be kept to less than 70 dB. Networks involving Totem and fuel sources from recycling are considered. M L

A78-46525 Thermal storage. T S Dean (Kansas, University, Lawrence, Kan.) Philadelphia, Pa., Franklin Institute Press, 1978 58 p 29 refs \$6 50

The problems of thermal energy storage are examined in terms of the design characteristics of systems to be used with solar heating units. Among the systems considered are active and passive heating, water, rock, and hybrid systems, and specially designed houses. The physics of heat storage are discussed with reference to heat conduction and loss in storage, and in terms of storage materials and the size and shape of storage containers. D M W

A78-46579 # Heat balance of earth (Teplovoy balans zemli). M I Budyko, T G Beriland, N A Efimova, L I Zubenok, and L A Strokina. Leningrad, Gidrometeoizdat, 1978 41 p 51 refs In Russian

Results of improved calculations of the heat-balance components of earth's surface are reported for yearly average conditions. The technique used to determine the heat-balance components from

land- and sea-based actinometric observations as well as from satellite data on the radiation balance of the earth-atmosphere system is described in detail, with special attention given to short-wavelength solar radiation on the continents, effective radiation from the land surface, the radiation balance of the ocean surface, heat expended by evaporation from the land surface, and heat expended by both evaporation from the ocean surface and turbulent heat transfer between the ocean surface and the atmosphere. World maps of heat-balance components are presented which show yearly average values of total radiation, radiation balance, heat expended by evaporation, the turbulent heat flow between earth's surface and atmosphere, and heat transfer between the ocean surface and underlying waters. The global surface heat balance is estimated along with global values of the various components and the heat balance components for different latitude zones. F G M

A78-46601 Distributed solar power systems - An option. A B Meinel and M P Meinel (Arizona, University, Tucson, Ariz.) (American Association for the Advancement of Science, Annual Meeting, Denver, Colo., Feb. 21-26, 1977) *Energy*, vol 3, Summer 1978, p 23-25

The paper is concerned with the economics of a distributed system of individual solar collector modules interconnected to a single power producing unit by the means of a heat transfer medium. A distributive system can use fixed mirror collectors which have a better survivability/cost relationship than heliostat or tracking collectors, and some examples of modular concentrating collectors are examined. The use of three large modules and the use of 100 small modules are compared. A cost effectiveness study of solar power collectors suggests that significant cost reductions are necessary to equal the cost of power from conventional power plants. Ways of improving the cost effectiveness of solar systems are considered. M L

A78-46602 Production of medium pressure process steam from low temperature geothermal fluid. C D Hornburg (DSS Engineers, Inc., Ft. Lauderdale, Fla.) *Energy*, vol 3, Summer 1978, p 29, 30

Procedures for utilizing large amounts of moderate-temperature geothermal energy are examined, and the cost and profitability of geothermal energy supply systems are discussed with reference to the supplying of energy to a 1000-ton-per-day bleached kraft pulp and paper mill. Steam compression is considered, and it is suggested that a multieffect compression with desuperheating between effects would give reasonable efficiency coupled with simplicity. A simplified geothermal energy self-beneficiation system is described, this system, which uses only geothermal fluid after flashing to heat, evaporates isobutane which passes through a turbine driving the steam compressors. It is thought that processes can be grouped together at specific geothermal sites for synergic production of products in an optimum economic manner. M L

A78-46825 Solar energy satellites and satellites for energy transmission (Sonnenenergie-Satelliten und Energie-Übertragungs-Satelliten). H Hartbaum (Telefunken AG, Backnang, West Germany) (Verband Deutscher Post-Ingenieure, Post- und Fernmelde-technische Tagung, Hanover, West Germany, Apr 22, 1977) *Astronautik*, vol 15, no 3, 1978, p 78-83 In German

The possibility of using large geosynchronous satellite platforms for the collection of solar energy to be transmitted in the form of microwaves to earth antennas is examined in terms of available and predictable advances in technology, and in terms of cost. Three basic design concepts are presented: thermoelectric, whereby a large parabolic reflector concentrates solar energy onto an absorber for an actual power capability in the 10 GW range, photoelectric, which uses photovoltaic cells for the direct conversion of solar energy (a simpler but less powerful technique than thermoelectric), and a smaller (100 kW) modular concept employing characteristics of both thermo- and photoelectric methods, whereby the main advantage is ease of assembly. Also briefly considered is the possibility of a simple microwave reflector in GEO, which could transmit energy generated on earth to another earth receiving station. D M W

A78-46872 Energy - A review and survey B F Williams (RCA Laboratories, Princeton, NJ) *RCA Engineer*, vol 24, June-July 1978, p 10-17 7 refs

It is noted that growth in U.S. energy demand has up till now been met by increased consumption of easily accessible supplies of oil and natural gas (this availability also includes OPEC production, which, though expensive, has allowed the West to rely on its traditional energy sources). Even OPEC oil, however, will begin to fall short of demand before the end of the century, and energy supplies will have to be found elsewhere. For the medium-term (until the first decades of the 21st century), this means conversion of oil and natural gas facilities (mostly in industry) to coal, more nuclear power plants are also required, and hydroelectric facilities can be expanded. Eventually, inexhaustible sources of energy, i.e., solar and nuclear fusion, will become economical. Attention is given to both national and RCA company strategy for dealing with the energy crisis, i.e., conservation, conversion to abundant indigenous North American sources, and research into new energy technologies.

A78-46873 Comparative numerical studies of ideal magnetohydrodynamic instabilities M S Chance, J M Greene, R C Grimm, J Manickam (Princeton University, Princeton, NJ), W Kerner (Max-Planck-Institut für Plasmaphysik GmbH, Garching, West Germany), D Berger, L C Bernard, R Gruber, F Troyon (Lausanne, Ecole Polytechnique Federale, Lausanne, Switzerland), and J L Johnson *Journal of Computational Physics*, vol 28, July 1978, p 1-13 15 refs. Research supported by the Swiss National Science Foundation, Contract No. EY-76-C-02-3073

Stability properties associated with a specific analytic equilibrium have been calculated to compare the accuracy of three large computational programs that have been developed at Garching, Princeton, and Lausanne. All three use a Galerkin formulation of the variational principle for determining spectra. Good agreement is found, verifying the efficacy of all three codes. (Author)

A78-47187 # The concept of availability for gas turbine application evaluation T C Heard and R P Lang (General Electric Co., Schenectady, NY) (*American Society of Mechanical Engineers, Gas Turbine Conference, London, England, Apr 9-13, 1978, Paper 78-GT-140*) *ASME, Transactions, Journal of Engineering for Power*, vol 100, July 1978, p 452-456

It is attempted to demonstrate that the productivity of different gas turbine applications and arrangements can be relatively easily estimated. The availability of a gas turbine or installation is the portion of time the turbine or installation is capable of normal operation when it is needed. A general probability formula which indicates the fraction of the time which a specific number of units can be expected to be shut down and unavailable is presented for an installation with more than one gas turbine unit. Attention is given to single station expected power productivity, single station expected flow productivity, a single station with one spare unit, and pipeline productivity. G R

A78-47190 # Hydrogen gas generation in water heat pipes G F Pittinato (McDonnell Douglas Astronautics Co., Huntington Beach, Calif.) *ASME, Transactions, Journal of Engineering Materials and Technology*, vol 100, July 1978, p 313-318 13 refs NSF Grant No. GI-41310

Water heat pipes were fabricated from 316, 347, and 430 stainless steel, Monel 400, CDA 715, Inconel 600, and Incoloy 800. All of these materials generated varying amounts of hydrogen gas during the first few days of operation. However, as the heat pipes continued to operate, the amount of gas in each heat pipe, excluding 430 stainless steel, decreased by permeating through the heat pipe walls. Inconel 600 appeared to be the most acceptable material for water heat pipes by returning to isothermal operation over a short time period. An equation based on a diffusion dependent mechanism was developed that predicts heat pipe performance recovery rates.

A78-47205 Oil-shale kerogen - Low temperature degradation in molten salts R C Bugle, K Wilson, G Olsen, L G Wade, Jr., and R A Osteryoung (Colorado State University, Fort Collins, Colo.) *Nature*, vol 274, Aug 10, 1978, p 578-580 12 refs. Research supported by the U.S. Department of Energy.

The degradation of Green River oil shale, principally at 320°C, with use of a sodium chloride-saturated tetrachloro-aluminate melt is studied. Yield data are presented, and it is found that, while aromatic moieties are relatively inert to the solvent system, aliphatic materials containing carbon in other than sp³ hybridization are especially reactive. It is suggested that the mechanism of degradation involves intramolecular disproportion catalyzed by the tetrachloroaluminate melt's ability to stabilize the resulting short-lived intermediates until the participating macromolecules have been sufficiently reduced in size to become soluble in conventional solvents. M L

A78-47269 # Let's put fuel efficiency into perspective J P Dow (Grumman American Aviation Corp., Savannah, Ga.) *Aircraft Engineering*, vol 50, July 1978, p 24-27

The paper discusses several measures of fuel efficiency and examines the advantages of each as it applies to business aircraft. The measures of efficiency discussed are passenger miles, fuel consumption per mile or specific range, range factor (a measure of design efficiency), and specific fuel consumption (a measure of engine efficiency). Figures are presented illustrating changes of specific fuel consumption for four different conditions of net thrust definition. Specific range comparisons are then presented for a mission of 500 nautical miles along with a range factor analysis for missions of the same distance. B J.

A78-47295 Radial profile of dc toroidal current driven by RF travelling field M Fukuda (Nagoya University, Nagoya, Japan) *Physical Society of Japan, Journal*, vol 45, July 1978, p 283-288 20 refs

The radial profile of dc toroidal current driven by an RF travelling field is studied experimentally in a magnetized plasma, in connection with the radial profile of RF field. As the toroidal magnetic field increases, the RF field penetrates the plasma and becomes bell-shaped profile, while the dc current has a hollow structure. The hollow type structure of induced current is interpreted on the basis of force balance between the electromotive force due to RF travelling field and the frictional force due to collisions, where the former is proportional to the absorbed RF power.

A78-47423 The second generation of high-bypass turbofans - A market clouded by uncertainty J F Brindley *Interavia*, vol 33, Aug 1978, p 711-714

Second-generation high bypass turbofan concepts for commercial aviation are reviewed in terms of performance and fuel economy. The General Electric/SNECMA CFM56 is considered the most advanced, offering fuel savings on the order of 30% per passenger over older engines. The CFM56 will be rated at 10,885 kp and could enter service by 1981. Other engines are also reviewed, including the RB 211-535, the JT10D, rated at 14,515 kp, to be used in a new Boeing trijet, and the CF6-32, which maintains the core of the Dash-602 while incorporating a new LP turbine and turbine mid-frame. D M W.

A78-47449 A possible explanation for the photovoltaic effect in indium tin oxide on InP solar cells. R Singh and J Shewchun (McMaster University, Hamilton, Ontario, Canada) *Journal of Applied Physics*, vol 49, Aug 1978, p 4588-4591 29 refs. Research supported by the National Research Council of Canada, Contract No. E(04-3)-1203

Recently, Sree Harsha and co-workers reported a 14.4% efficient n-indium tin oxide/p-InP solar cell. In principle, it is difficult to visualize a high-efficiency photovoltaic device with this particular structure because of large interfacial defects due to crystal structure and lattice mismatch. However, an explanation for the operation of

this solar cell based on the presence of a thin interfacial insulating layer between the indium tin oxide and the InP is proposed. The operation is similar to tunnel MIS solar cells where the metal is replaced by a degenerate wide-band-gap oxide (indium tin oxide) semiconductor. The calculations show that such semiconductor-insulator-semiconductor solar cells can yield efficiencies as high as 26% (AM2) with InP as the base semiconductor (Author)

A78-47474 **Advanced processing techniques for the manufacture of nickel-base alloy discs from powder** G J Lewis, D M Parkin, and F A Thompson (Henry Wiggin and Co., Ltd., Hereford, England). In: *Forging and properties of aerospace materials*, Proceedings of the International Conference, Leeds, England, January 5-7, 1977. London, Metals Society, 1978, p 399-416. 15 refs

Powder metallurgical techniques used to obtain disk alloy properties suitable for improving aero gas turbine efficiencies are discussed. Three approaches are examined - the processing of disk alloys to obtain property improvements over existing materials, the utilization of powder metallurgy to shorten disk production routes and reduce costs, and future trends in powder metallurgy for disks. The importance of the ability to produce segregation-free billet is considered, and the capabilities of hot isostatic pressing and powder canning techniques are described. (Author)

A78-47485 **Controlled fusion - Progress to date** M P Bachynski (MPB Technologies, Inc., Ste Anne de Bellevue, Quebec, Canada). *Engineering Journal*, vol 61, July 1978, p 15-19. 9 refs

The development of laser fusion for eventual commercial energy production is reviewed in terms of the physical principles of the deuterium reaction, and in terms of a comparison between the most promising concepts for fusion reactors, i.e., tokamaks and laser fusion. Attention is given to the Canadian research effort, and it is noted that in spite of high quality research being conducted on a small scale, the large scale effort necessary to help meet Canada's future energy needs is lacking. A partial solution may be found in increased Canadian cooperation in international fusion research. (Author)

A78-47596 * # **Substitution of ceramics for high temperature alloys** H B Probst (NASA, Lewis Research Center, Cleveland, Ohio). *American Chemical Society, Federation of Materials Societies and American Society for Metals, State-of-the-Art Symposium on Scarce and Critical Materials, 14th, Washington, D.C., June 5-7, 1978, Paper*. 17 p. 20 refs

Ceramics such as silicon nitride and silicon carbide are currently receiving a great deal of attention as potential materials for advanced gas turbine engines. The primary advantage offered by ceramics is their high temperature capability which can result in turbine engines of improved efficiency. Other advantages when compared to the nickel and cobalt alloys in current use are raw material availability, lower weight, erosion/corrosion resistance, and potentially lower cost. The use of ceramics in three different sizes of gas turbine engines is considered, these are the large utility turbines, advanced aircraft turbines, and small automotive turbines. The effects of material substitutions are reviewed in terms of engine performance, operating economy, and secondary effects. (Author)

A78-47748 **Progress in geothermal energy** J D Garnish (Department of Energy, London, England). *Endeavour*, vol 2, no 2, 1978, p 66-71. 15 refs

Techniques for utilizing geothermal energy are discussed with attention to French installations and the cracking of dry rock. The four geothermal heating installations already functioning in the Paris region draw water (between 57 and 75 C) from 1500-2000 m and serve 13,000 dwellings. The additional use of hot water as a heat pump permits heat utilization until the water temperature is as low as 7 deg, this water is then reinjected into the Dogger sandstone stratum, the source of the hot water. The rock cracking procedure, tested at Los Alamos, involves the pumping of water under pressure into a deep borehole in a uniform impermeable rock; in principle, a

single vertical disk-shaped crack should be formed, and the growth of the crack should be controllable. If a second borehole is drilled to intersect the crack of the first borehole, water circulated in the loop can extract heat from the hot (granite) rock formation. (Author)

A78-47749 **Gasifying coal underground** P N Thompson (National Coal Board, London, England). *Endeavour*, vol 2, no 2, 1978, p 93-97. 7 refs

The technology of underground coal gasification (UCG) is discussed. Topics examined include combustion characteristics, the construction of a linkage channel between boreholes, the use and the upgrading of the gas, methods of underground gasification, and the economics of UCG. Upgrading to a clean fuel gas, to SNG, or to hydrogen as well as production of carbon monoxide are considered, and the linked vertical well system being tested at Hanna, Wyoming is described. It is noted that UCG is not suitable for gasifying thin poor-quality seams, that UCG has considerable environmental effects since a borehole is required every 30 m that is, 20-50 hectares are required for a 100 MW generating station, and that the gas produced is dirty and of low calorific value (4-5 MJ/cu m). (Author)

A78-48056 **A Be p-silicon MIS solar cell** Y Maeda (Hoxan Corp., Sapporo, Japan). *Applied Physics Letters*, vol 33, Aug 15, 1978, p 301, 302. 9 refs

An MIS solar cell, consisting of beryllium on p type silicon with an interfacial oxide layer, has been found to have good conversion efficiency and good reproducibility. Sunlight conversion efficiency appeared to be more than 9% without the use of an antireflection coating. (Author)

A78-48097 # **Modeling and evaluation of combustion process of a three-valve stratified charge engine** T Asanuma (Tokyo, University, Tokyo, Japan), M K Gajendra Babu (Tokyo, University, Tokyo, Japan, Indian Institute of Technology, Bombay, India), and S Yagi (Tokyo, University, Tokyo, Honda Research and Development Co., Ltd., Japan). *Tokyo, University, Institute of Space and Aeronautical Science, Report* no 556, vol 43, Apr 1978, p 15-28. 12 refs. Research supported by the Japan Society for the Promotion of Science.

This paper describes the development of a mathematical model for the compression, combustion and expansion process of a stratified charge engine, consisting of an auxiliary combustion chamber with an inlet valve and a main combustion chamber with both the inlet and exhaust valves. After calculating the mixture formation at the end of compression process, a simple combustion model was developed to compute the gas temperature, gas pressure and the rate of formation of NO and CO at each crank angle, using the basic energy equation and reaction kinetics for both the auxiliary and main chambers. The above calculations were also extended for the expansion process. The evaluation of the model was carried out by comparing the computed and experimental data. A satisfactory correlation was observed between them. (Author)

A78-48360 # **In vitro models for photosynthesis /The Bakerian Lecture, 1977/** G Porter (Royal Institution of Great Britain, Davy Faraday Research Laboratory, London, England). *Royal Society (London) Proceedings, Series A - Mathematical and Physical Sciences*, vol 362, no 1710, Aug 22, 1978, p 281-303. 28 refs. Research supported by the Science Research Council, English Electric Co., and General Electric Co.

In vitro systems which perform photosystem II reactions are described. The reactions which are modeled, which are probably the principal stages of the process, involve (1) light harvesting and trapping, (2) electron transfer from chlorophyll to a quinone, and (3) oxidation of water via an intermediate containing manganese. For the first reaction, kinetic studies in vitro are reported for porphyrin-dium cruentum as well as chlorophyll A in chlorella and chloroplasts. In vitro models of the light harvesting unit and mechanisms of concentration quenching are examined. Models for the third reaction are discussed with reference to the photochemical reactions of

The use of beta-alumina as a solid ionic conductor in a variety of power sources is now well established. The properties of beta-alumina with regard to these devices are discussed with particular reference to the sodium-sulphur battery. The relationships between phase composition and microstructure with ionic conductivity and mechanical strength are considered and the constraints these properties place on cell design are outlined. Recent experimental data on the mechanical and electrical behaviour of beta-alumina are reported and critical problems for the successful application of beta-alumina are identified. (Author)

A78-49328 # A program code and tables of analytical solutions of the Helmholtz equation for toroidal coordinates. M. Seki, I. Kaji, and T. Honma. *Hokkaido University, Faculty of Engineering, Bulletin*, Aug 1978, p. 23-40. 5 refs. In Japanese, with abstract in English.

The Helmholtz equation is solved in toroidal coordinates. The solutions are useful for analyses of a toroidal plasma and of other problems to be solved in toroidal coordinates. A FORTRAN program for numerical calculation uses series representation of Legendre functions. The solutions of the Helmholtz equation for toroidal coordinates were computed by the FORTRAN program and tabulated. (Author)

A78-49335 Nuclear process heat for coal gasification and hydrogen production. K. F. Knoche (Rheinisch-Westfälische Technische Hochschule, Aachen, West Germany). *Progress in Energy and Combustion Science*, vol. 4, no. 2, 1978, p. 63-72. 14 refs.

The basic concepts of nuclear coal gasification with steam and with hydrogen are described, cost factors in the processes are reviewed, and the status of hydrogen production with nuclear process heat is discussed. Nuclear latent heat transport is discussed, and is shown to be a possible means of reducing gas consumption is introduced into a general gas distribution system. For countries where coal mining and coal production costs are quite high, nuclear coal gasification can be competitive with conventional gasification methods. Cost estimates for hydrogen production by thermochemical and hybrid cycles indicate that so far they are not competitive with energy conversion processes using fossil fuels, but they do have potential to be competitive with direct water electrolysis. P. T. H.

A78-49337 Fifty years of combustion research at General Motors. W. G. Agnew (GM Research Laboratories, Warren, Mich.). *Progress in Energy and Combustion Science*, vol. 4, no. 2, 1978, p. 115-155. 127 refs.

This paper surveys the work and research carried out at one automotive research laboratory since 1927 on the single problem of the process of combustion during a cycle in an internal combustion engine. Broken down into the engine types on which the research was focused, the studies embraced the following aspects: (1) conventional spark-ignition engines: preflame reactions, pressure development, halo-carbon effects, hydrocarbon emissions, NO_x formation model, fuel atomization effects, turbulent flame propagation model; (2) diesel engines: additive effects on ignition lag, scavange ratio measurements, hyprex free piston engine movies, diesel odor, emissions reduction, particulate formation; (3) unconventional intermittent combustion engines: 2 stroke U-engine, direct cylinder air injection, stratified charge rotary engine, fuel spray/air flow interaction; (4) continuous combustion engines: T 56 turbojet combustor probing, Stirling GPU combustor, swirl combustor, Rankine engine combustor, catalytic combustion, methanol combustion, and fuel bound nitrogen studies. Research on hydrogen engines is also reported, and examples of some of the instrumentation developed for many of the studies are described. P. T. H.

A78-49421 Observations on boron release from coal-fired power plants. E. S. Gladney, L. E. Wangen, D. B. Curtis, and E. T. Journey (California, University, Los Alamos, N. Mex.). *Environmental Science and Technology*, vol. 12, Sept 1978, p. 1084, 1085. 24 refs. Research sponsored by the U.S. Department of Energy, NSF Grant No. GI-36338X.

The boron content of coal and power plant process ashes is investigated. Calculation of mass balances suggests that a large fraction of the boron is being released to the atmosphere. (Author)

A78-49603 Some results of researching the application of magnetohydrodynamics in power engineering. E. M. Shelkov, S. I. Pishchikov, M. S. Pinkhasik, and Iu. A. Zakharko (*Magnitnaia Gidrodinamika*, Oct.-Dec. 1977, p. 87-97). *Magnetohydrodynamics*, vol. 13, no. 4, Apr 1978, p. 454-462. 14 refs. Translation.

The results of studies conducted with the aid of various MHD devices, including the U-02 and U-25, are presented. Particular attention is given to the preparation, supply, and heating of oxidants, the intake and outlet of admixtures, combustion chamber parameters, MHD generators, magnetic and inversion systems, and measurement and recording techniques. S. C. S.

A78-49604 Integral characteristics of induction-type MHD machines with large electromagnetic-interaction parameters. R. A. Valdmann, R. R. Krishberg, I. A. Lielpeter, Ch. K. Mikriukov, and L. I. Ulmanis (*Magnitnaia Gidrodinamika*, Oct.-Dec. 1977, p. 107-109). *Magnetohydrodynamics*, vol. 13, no. 4, Apr 1978, p. 471-474. Translation.

A78-49637 Degradation of solar cell efficiency by sheet resistance. K. Lehevec and A. Fedotowsky (Southern California, University, Los Angeles, Calif.). *Solar Energy*, vol. 21, no. 2, 1978, p. 81-86. Contract No. E(49-18)-2457.

The efficiency degradation of solar cells due to sheet resistance-generated losses is computed as a function of light intensity and electrode spacing. The degradation derived by Heizer and Chu is shown to be 33 per cent too large at small electrode spacing. We give an approximate analytic relation for the efficiency degradation and derive from it the electrode spacing which minimizes the combined losses due to sheet resistance and electrode shading. An electrode configuration which prevents extreme power loss by local short circuits in the photojunction is described. (Author)

A78-49638 The photochemical heat pipe. B. Carlsson and G. Wettermark (Kungl. Tekniska Högskolan, Stockholm, Sweden). *Solar Energy*, vol. 21, no. 2, 1978, p. 87-92. 10 refs.

The performance of a solar collector system for high temperature heat delivery based on a photochromic reaction is discussed. The system consists of a non-focusing collector and a reactor integrated into a flow system. In the collector, kept close to ambient temperature, the chemical potential of the photochromic system is increased through an endothermic photochemical reaction and is used to drive the reverse thermal reaction taking place in the reactor at a high temperature. No separation of the photoproducts is involved. Accordingly, the highest temperature at which heat can be delivered from the reactor is determined by the maximum attainable photostationary state in the collector and not, as in a conventional flat-plate collector, by heat-loss from the collector to the surroundings. Accordingly, the highest temperature at which heat can be delivered from the reactor is determined by the maximum attainable photostationary state in the collector and not, as in a conventional flat-plate collector, by heat-loss from the collector to the surroundings. The functioning of the device is exemplified by calculations for a model system utilizing the photodissociation of gaseous nitrosyl-chloride. The results show that it should be possible to build a system which, on a clear day, delivers about 100 W heat at temperature above 200°C for each square meter of collector area. A tenfold reduction in the radiation flux density of the incident light will only slightly reduce output efficiency. (Author)

A78-49639 'Wet-type' solar cells with semiconductor electrodes. H. Tsubomura, M. Matsumura, K. Nakatani, Y. Yamamoto, and K. Maeda (Osaka University, Toyonaka, Japan). *Solar Energy*, vol. 21, no. 2, 1978, p. 93-98. 16 refs.

The photovoltages and photocurrents arising from 'wet' solar cells of the type, (semiconductor electrode/aqueous solution of electrolyte/platinum electrode), have been measured and discussed. Earlier work by the present authors and others on such 'wet' solar

cells using a semiconductor electrode is briefly and critically reviewed. The effect of dyes, either dissolved in the solution or coated on the electrode surface, was studied in detail including the effect of reducing agents, which turned out to act as electron suppliers. The photovoltaic effects in nonaqueous solutions were also studied. The photocurrent efficiencies of the dye-sensitized cells were improved by increasing the quantities of dyes adsorbed on the surface and reached 19 per cent for monochromatic illumination at the wavelengths of the absorption peaks of the dyes and under sufficient anodic biases (Author)

A78-49640 Assessment of solar applications for transfer of technology - A case of solar pump. J K Parikh (International Institute for Applied Systems Analysis, Laxenburg, Austria) (UNESCO, Conference on Solar Energy, London, England, May 1977) *Solar Energy*, vol 21, no 2, 1978, p 99-106 8 refs

For the large and increasing rural population in the developing countries, decentralized solar applications could be relevant. However, new solar technologies being currently developed in the laboratories have to be ultimately acceptable in the field. The conditions which have to be satisfied before the solar applications could be acceptable are discussed. The solar pump is examined in detail. A comparative techno-economic analysis is carried out for solar pumps and diesel pumps. Attention is given to an escalation of the diesel price and factors related to climate, geography, locale, and social and institutional environment, for two types of uses namely for drinking water and for irrigation. It seems unlikely that a solar pump could compete with the diesel engine before the costs are brought down by a factor of 20-50 for irrigation purposes. The issues discussed for the case of a solar pump are also relevant for other solar applications (Author)

A78-49641 * Theory and applications for optimization of every part of a photovoltaic system. D Redfield (RCA Laboratories, Princeton, N.J.) *Solar Energy*, vol 21, no 2, 1978, p 107-112 ERDA-NASA-sponsored research

A general method is presented for quantitatively optimizing the design of every part and fabrication step of an entire photovoltaic system, based on the criterion of minimum cost/Watt for the system output power. It is shown that no element or process step can be optimized properly by considering only its own cost and performance. Moreover, a fractional performance loss at any fabrication step within the cell or array produces the same fractional increase in the cost/Watt of the entire array, but not of the full system. One general equation is found to be capable of optimizing all parts of a system, although the cell and array steps are basically different from the power-handling elements. Applications of this analysis are given to show (1) when Si wafers should be cut to increase their packing fraction, and (2) what the optimum dimensions for solar cell metallizations are. The optimum shadow fraction of the fine grid is shown to be independent of metal cost and resistivity as well as cell size. The optimum thicknesses of both the fine grid and the bus bar are substantially greater than the values in general use, and the total array cost has a major effect on these values. By analogy, this analysis is adaptable to other solar energy systems (Author)

A78-49642 An analytic evaluation of the flux density due to sunlight reflected from a flat mirror having a polygonal boundary. F W Lipps and M D Walzel (Houston, University, Houston, Tex.) *Solar Energy*, vol. 21, no 2, 1978, p. 113-121 5 refs Contract No E(04-3)-1108

Computer algorithms for the flux density of reflected sunlight from a heliostat become an essential part of the optical simulation problem for the central receiver system. An exact analytic result is available for heliostats having polygonal boundaries. An analytical method for round heliostats is given in Appendix A, which is extremely complex and requires quartic roots. A useful numerical method is given in Appendix B for heliostats of arbitrary shape. A comparison is made between the analytic method and the Hermite function method, which is much faster but less accurate. The analytic method provides a basis for evaluating all other flux density calculations (Author)

A78-49643 Thermal conversion of solar radiation - Theoretical performance of collectors furnished with an absorbent selective surface. R Pasquetti and F Papini (Aix-Marseille I, Université, Marseille, France) *Solar Energy*, vol 21, no 2, 1978, p 129-138 8 refs Translation

The present study is concerned with the determination of the behavior of selective surfaces in thermal converters of solar energy. By means of an idealized model, the influence of various parameters such as selectivity, concentration ratio and working temperature on the efficiency of the collector is thus brought out. The study leads to an optimized selective surface for each condition of use, either by considering the instantaneous efficiency or, in a more realistic way, by introducing the daily efficiency of an installation. Furthermore, a 'temperature-concentration' diagram allows us to make an a priori estimation of the suitable value of the selectivity if the temperature and the concentration ratio are externally determined. It is also shown how convective phenomena have to be taken into account in the establishment of the characteristics of the collector (Author)

A78-49644 Optical properties of compound circular arc concentrators. R E Jones, Jr and G C Anderson (Lakehead University, Thunder Bay, Ontario, Canada) *Solar Energy*, vol 21, no 2, 1978, p 149-151 8 refs

The chief disadvantages of focusing solar radiation concentrators are that they require continual tracking to follow the sun, and that they do not collect diffuse radiation. The cylindrical reflector-type nonfocusing concentrators considered do not have these disadvantages. The design of a compound circular arc concentrator (CCAC) is discussed. The cylindrical compound parabolic concentrator (CPC) has two reflector surfaces. A description is presented of approaches for approximating the CPC by circular arcs. A numerical ray tracing technique is used to investigate the optical properties of the CCAC for several concentration ratios. It is found that the optical properties of the CCAC are at a disadvantage in comparison with the CPC, although less so for low concentrations. It is suggested that any decision to use the CCAC rather than the CPC design should be based on economic grounds. G R

A78-49645 Metal hydrides as chemical heat pumps. D M Gruen, M H Mendelsohn, and I Sheft (Argonne National Laboratory, Argonne, Ill.) *Solar Energy*, vol 21, no 2, 1978, p. 153-156 10 refs ERDA-sponsored research

Chemical heat pumps, as distinguished from other heat pumps, rely on chemical equilibria rather than mechanical compressors for their operation. Gruen and Sheft (1975) have proposed a two metal hydride chemical heat pump system using solar or any other appropriate energy source for space heating and cooling, refrigeration, and power production. A detailed description is presented of the refrigeration mode of operation for a two metal hydride chemical heat pump system. The derivation of general heat pump equations which may be applied to any pair of compounds, which depend on a linear relationship of $\ln P$ vs $1/T$ for their heat pump utility is also given. Attention is paid to basic physico-chemical properties of metal-hydrides and their application in an absorption refrigerator, the considered cooling cycle compared to a standard absorption refrigeration cycle, and the coefficient of performance. G R

A78-49646 A novel solar collector. Y Caouris, R Rigopoulos, J Tripanagnostopoulos, and P Yianoulis (Patras, University, Patras, Greece) *Solar Energy*, vol 21, no 2, 1978, p 157-160 6 refs

In the proposed solar collector design, the working fluid (liquid) circulates above the absorbing surface and absorbs the IR radiation which is emitted by it. There is, therefore, no need for the selective black surface of the conventional flat solar thermal collector. The proposed collector consists of a number of plates, which are transparent in the visible and near IR part of the spectrum and have small thermal conductivity. The last surface is black and absorbs the solar radiation. A working liquid is used which has high transmittance in the visible and near IR part of the spectrum and nearly zero transmittance at longer wavelengths. The mathematical relations

manganese porphyrins and phthalocyanins with quinone. While each of the three processes has been reproduced to some extent in vitro, light harvesting antenna efficiencies are lowered by concentration quenching. M L

A78-48401 # New models of solar components and prospects of their optimization (Norye modeli solnechnykh elementov s perspektivy ikh optimizatsii) N S Lidorenko, V M. Evdokimov, A K Zaitseva, M M Koltun, S V Riabikov, and D S Strebkov (Vsesoiuznyi Nauchno-Issledovatel'skii Institut Istochnikov Toka, Moscow, USSR) *Geliotekhnika*, no 3, 1978, p 3-17. 34 refs In Russian

Consideration is given to the theory of solar cells with 'built-in' electric fields. The development of a method for determining impurity concentration profiles which would optimize the accumulation of carriers from the doped layer is discussed. Attention is given to infrared-transparent solar cells and to cells with two-sided sensitivity. The use of solar concentration techniques to increase the efficiency of solar arrays is discussed. Different types of matrix multijunction cells with various p-n junction configurations are described. The possibility of producing solar cells on the basis of the volume photovoltaic effect is discussed. B J

A78-48402 # Photoelectric properties of the thin-film pCdTe-nCdS heterojunction (Fotoelektricheskie svoistva plenochnogo pCdTe-nCdS-geteroperekhoda) S A Azimov, Sh A Mirzagatov, and D T Rasulov (Akademii Nauk Uzbekskoi SSR, Fiziko-Tekhnicheskii Institut, Tashkent, Uzbek SSR) (*Vsesoiuznaia Konferentsiia po Ispol'zovaniu Solnechnoi Energii, Ashkhabad Turkmen SSR, Sept 1977*) *Geliotekhnika*, no 3, 1978, p 18-24. 13 refs In Russian

A study was performed to evaluate the spectral distribution of the collection coefficient, Q, of the thin-film pCdTe-nCdS heterojunction (a possible solar cell element) for different thicknesses of the wideband upper layer of CdS, the photo-volt-ampere characteristics were also determined for different levels of illumination. It is found that Q increases with increase in thickness of the CdS layer, at 5 microns, a Q of 0.94-0.95 is obtained in the 0.56-0.8 micron wavelength region. An analysis of photoelectrical and electrophysical measurements has shown that there is an i-region in the pCdTe-nCdS heterojunction. This i-region appears to be due to the vaporization of cadmium from the surface of sublimated CdTe films during cooling. B J

A78-48403 # Optimization and design calculation of a radiative cooling system for a Stirling-engine energy unit (Optimizatsiia i raschet sistemy teplosbora izlucheniem energoustanovki s dvigatelem Stirlinga) G Ia Umarov, L M Drabkin, and V S Trukhov (Tashkentskii Institut Zheleznodorozhnogo Transporta, Akademii Nauk Uzbekskoi SSR, Fiziko-Tekhnicheskii Institut, Tashkent, Uzbek SSR) *Geliotekhnika*, no 3, 1978, p 25-30. In Russian

The paper presents a method of specific-area optimization for the radiative cooling-fin system of a Stirling-engine solar energy unit in a planetary environment. An expression is obtained which enables optimization by means of the most easily obtainable experimental characteristics of the Stirling cycle. A method for the design and calculation of a one-dimensional radiator of tube-membrane type is developed on the basis of results of Stirling-cycle optimization. B J

A78-48404 # Characteristics of silicon photovoltaic cells with inversion layers (Kharakteristiki kremniyevykh fotoprebrazovatelei s inverzionnym sloem) B I Gil'man, V V Kasatkin, Iu V Sorokin, Iu B Skokov, and M B Zaks *Geliotekhnika*, no 3, 1978, p 31-38. 9 refs In Russian

Experiments were performed to investigate the output characteristics of silicon solar cells with doped inversion layers, the function of these layers is to collect minority carriers in the space charge region. Output current and the shape of the volt-ampere characteristics are studied as a function of initial voltage, intensity and wavelength of illumination, as well as the geometrical dimensions of inversion regions. Spreading of the photocurrent in the inversion

layer plays a dominant role in the conversion process. Ways to raise the energy conversion efficiency of this type of solar cell are discussed. B J

A78-48405 # Composite heliostats of high-power solar energy systems (Sostavnye geliostaty moshchnykh solnechnykh ustanovok) R A Zakhidov and A Sh Kholzhaev (Akademii Nauk Uzbekskoi SSR, Tsentral'noe Proektno-Konstruktorskoe i Tekhnologicheskoe Biuro Nauchnogo Priborostroeniia, Uzbek SSR) *Geliotekhnika*, no 3, 1978, p 39-44. 8 refs In Russian

A mathematical model has been developed for investigating the mutual shading of individual heliostats in a paraboloidal multiheliostat system. On the basis of an analysis of shading effects, formulas are obtained for the optimization of the dimensions and mutual positioning of heliostats. Computer calculations are used to determine optimization relations which can be used to establish operational modes and possible power losses for the solar system. The model can be applied to the analysis and optimization of solar tower systems. B J

A78-48406 # Determination of contact thermal resistances (Opredelenie kontaknykh teplovykh soprotivlenii) Ch Agabaev and N Obezakhatov (Akademii Nauk Turkmenkoi SSR, Fiziko-Tekhnicheskii Institut, Ashkhabad, Turkmen SSR) *Geliotekhnika*, no 3, 1978, p 51-55. In Russian

An experiment was conducted to investigate heat transfer between copper plates for the following conditions: (1) plates in contact, (2) plates separated by thin air gaps (0.5-1.0 mm), (3) plates separated by electrical insulation, and (4) plates separated by layers of scale. The heat source was an electric furnace and the test temperature range was 300-1000 K. Values of specific heat flux and total thermal resistance are presented for the four schemes of contact and for different temperatures. Total thermal resistance and temperature jumps are obtained for a heat flux of 130,000 W/sq m. The types of plate contact examined here are such that may be encountered in different types of solar energy systems, and particularly in solar thermoelectric generators. B J

A78-48407 # Dependence of the thermal engineering characteristics of a glassed solar regenerator on the cross section of the air slit (Zavisimost' teploekhnicheskikh kharakteristik osteklennoho gelioregeneratora ot secheniia shcheli dlia vozdukhha) A Kakabaev, A Khandurdyev, O Klyshchaeva, and O Tuiiev (Akademii Nauk Turkmenkoi SSR, Fiziko-Tekhnicheskii Institut, Ashkhabad, Turkmen SSR) *Geliotekhnika*, no 3, 1978, p 56-58. In Russian

The paper presents experimental results on the intensity of evaporation and temperature of the solution in a solar regenerator for different upper cross sections of the air slit between the covering glass and the surface of the regenerator. The amount of evaporated moisture is studied as a function of solar irradiation intensity and air gap width (0.08 and 0.05 m). Empirical relationships are determined for the amount of evaporated moisture and for the temperature of the solution at the end of the regenerator. These relationships can be used to optimize the operation of this type of solar regenerator, optimization is achieved by regulating the cross section of the air gap. B J

A78-48408 # Principles of the mathematical modeling of the energy structure of solar radiation regimes (Osnovy matematicheskogo modelirovaniia energeticheskoi struktury rezhima solnechnoi radiatsii) R B Salieva (Tashkentskii Elektrotekhnicheskii Institut Sviazi, Tashkent, Uzbek SSR) *Geliotekhnika*, no 3, 1978, p 62-71. 11 refs In Russian

A statistical modeling procedure is presented for studying solar radiation distribution on the earth surface. The procedure is based on periodic observations of normal-incidence insolation, but can also be used to construct models for other components of solar radiation, including total, scattered, and reflected. The approach is a probabilistic one, viewing the influx of solar radiation as a stationary stochastic temporal process. The procedure can be used to evaluate performance indices for various solar energy systems. B J

A78-48463 # The development of a low cost turbojet engine in the 1 kN thrust class W C Elrod, H E Wright (USAF, Institute of Technology, Wright-Patterson AFB, Ohio), and D B Wilkinson (USAF, Aero Propulsion Laboratory, Wright-Patterson AFB, Ohio) *American Institute of Aeronautics and Astronautics and Society of Automotive Engineers, Joint Propulsion Conference, 14th, Las Vegas, Nev., July 25-27, 1978, AIAA Paper 78-966* 9 p 5 refs

Turbojet engines in the 1 kN class were developed by the conversion of two different sizes of turbosuperchargers into turbojet engines. Each engine was run from idle to maximum allowable turbine inlet temperature (1250K). The larger engine was derived from a turbosupercharger typically found on diesel truck engines while the smaller unit was from one used on the sports car size internal combustion engines. The larger unit using JP-4 type fuel produced 0.33 kN thrust dry and 0.483 kN thrust with afterburner. The afterburner was a dump type combustor using only the natural recirculation zone produced by the step change in diameter as the flame holder. The smaller unit operating on gaseous hydrogen produced 0.15 kN thrust. The combustor was a conventional tube type unit with a catalytic converter located at its exit section.

A78-48486 # Propulsion for future supersonic transports - 1978 status G B Evelyn, P E Johnson, and A Sigalla (Boeing Commercial Airplane Co., Seattle, Wash.) *American Institute of Aeronautics and Astronautics and Society of Automotive Engineers, Joint Propulsion Conference, 14th, Las Vegas, Nev., July 25-27, 1978, AIAA Paper 78-1051* 14 p 13 refs

Results of several studies that have taken place since the cancellation of the United States SST program in 1971 have shown significant progress in the technology that may make such an airplane eventually possible. Advances in propulsion technology have been a strong element of this progress. The state of propulsion technology, as applicable to a future SST, is reviewed, with emphasis on the progress and changes that have occurred since 1971. The review includes discussion of the basic technology that affects thermodynamic and mechanical characteristics of supersonic engines, competitive types of engine cycles, the state of supersonic intake technology and candidate concepts, and supersonic engine nozzles. Emphasis is placed on the interactions of the propulsion system with the rest of the airplane and on the assessment of the propulsion system in terms of airplane performance and noise.

A78-48505 Photovoltaic power generation. D L Pulfrey (British Columbia, University, Vancouver, Canada) New York, Van Nostrand Reinhold Co., 1978 230 p 240 refs \$16.95

The elements of photovoltaic power systems are examined, taking into account insolation, photovoltaic arrays for use in unconcentrated and concentrated sunlight, power conditioning and solar/nonsolar power plant interconnection, energy storage, present-day photovoltaic power systems, geosynchronous satellite solar power, and the institutional aspects of photovoltaic power development. Basic theory and present performance of solar cells are considered along with solar cells for unconcentrated sunlight systems, solar cells for concentrated sunlight systems, and the economic aspects of photovoltaic power systems. Attention is given to the solar cell equivalent circuit, the short circuit photocurrent, the conversion efficiency in large area solar cells, silicon solar cells, cadmium sulfide solar cells, inorganic semiconductors, organic semiconductors, gallium arsenide solar cells, and the cost of electricity from photovoltaic power systems.

A78-48535 # Free convection across inclined air layers with one surface V-corrugated S M Elsherbiny, K G T. Hollands, and G D. Raithby (Waterloo, University, Waterloo, Ontario, Canada) *ASME, Transactions, Journal of Heat Transfer*, vol 100, Aug 1978, p 410-415 26 refs Contract No EY-76-C-02-2597

Experimental measurements are presented for free convective heat transfer across inclined air layers, heated from below, and bounded by one V-corrugated plate and one flat plate. The measurements covered three values for the ratio A (averaged plate spacing to V-height), namely, A = 1, 2.5 and 4. They also covered angles of inclination with respect to the horizontal of 0, 30, 45 and 60 deg, and a Rayleigh number range of (10-4) million. The study proves, both theoretically and experimentally, that the free convective heat transfer is essentially the same, regardless of whether the V-corrugated plate is above or below. It was found that for the same average plate spacing, L, the convective heat losses across air layers bounded by one V-corrugated and one flat plate are greater than those for two parallel flat plates by up to 50 percent for the range studied. Experimental results are given as plots of Nusselt number versus Rayleigh number. A correlation equation is given for Nusselt number, Nu, as a function of the above-mentioned parameters.

A78-48550 # An assessment of overburden stability in the in-situ gasification of Texas lignite T W Thompson, T F Edgar, and K E Gray (Texas, University, Austin, Tex.) *American Society of Mechanical Engineers, Petroleum Mechanical Engineering and Pressure Vessels and Piping Conference, Mexico City, Mexico, Sept 19-24, 1976* ASME, Transactions, Journal of Pressure Vessel Technology, vol 100, Aug 1978, p 285-290 14 refs Research supported by the Texas Utilities Co., Atlantic Richfield Co., Continental Oil Co., Dow Chemical Co., Du Pont de Nemours and Co., Mobil Oil Corp., Shell Development Co., and NSF.

In-situ gasification can be competitive with shaft mining for the exploitation of coal at depths too deep for surface mining. The lignite deposits in Texas may be well suited to this process because of their high reactivity, comparatively high field permeabilities and closeness to industrial demand centers. Controlled operation of a gasification facility demands a knowledge of the likely behavior of the overburden and other surrounding rocks. Fracture or collapse of the roof rock can lead to excessive gas loss, water influx and subsidence effects. The overburden in much of Texas is weak and poorly compacted. Early roof collapse seems inevitable, and substantial upward caving may occur. Subsidence could be significant if high extraction ratios are used.

A78-48557 # Calculation of unsteady two-dimensional magnetohydrodynamic flows in a radial channel (Raschet nestatsionarnykh dukhmernykh magnitogidrodinamicheskikh techenii v radial'nom kanale). N P Gridnev and S S Katsnel'son *Magnitnaia Gidrodinamika*, Apr-June 1978, p. 77-82 9 refs In Russian

The present analysis deals with the situation where the flow generated in a cylindrical tube by the passage of a shock wave through an inert gas with an alkali metal addition issues into a disk-shaped MHD channel. The complex interaction of the expanding plasma flow with the magnetic field is analyzed, and a finite-difference scheme of third order accuracy, with a uniform time step, is proposed for calculating the shock interactions. For illustration,

the flow is calculated for conditions where both the magnetic Reynolds number and the Hall parameter are small V P

A78-48558 # **Allowing for the action of the yoke of an induction MHD machine by introducing new boundary conditions (Uchet deistviia iarma lineinoi induktsionnoi MGD-mashiny vvedeniem novykh granichnykh uslovii)** A Ia Vilnits *Magnitnaia Gidrodinamika*, Apr-June 1978, p 87-96 19 refs In Russian

In the present paper, the action of the magnetic yoke of a linear MHD machine is expressed by introducing a new type of boundary conditions in the form of a stepped normal induction component. This, together with the passage to a 'thin' working fluid at the limit, makes it possible to reduce the regions of both the working fluid and the yoke to lines (traces) with specified boundary conditions, assuming all the while that the Laplace equation is satisfied everywhere else. The new boundary conditions can be obtained by Fourier transforms with respect to the longitudinal coordinate. For an infinite yoke, the solution is shown to be rational. The case of a finite yoke leads to an integral equation or to an infinite system of algebraic equations V P.

A78-48559 # **Optimization of a diagonal MHD-channel (Optimizatsiia diagonal'nogo MGD-kanala)** D A But, I I Doperchuk, and S M A Koneev *Magnitnaia Gidrodinamika*, Apr-June 1978, p 110-116, 13 refs In Russian

In the present paper, a diagonal MHD-channel is optimized with allowance for transient turbulent boundary layers and boundary layer separation, placing constraints on the channel geometry, the magnetic field, and some other parameters of the problem. Optimization is achieved by a nonlinear programming method, termed the method of moving tolerances, modified to improve the convergence of the iterations. It is shown that the value of the conversion coefficient can be increased by 10 to 12% by rational profiling of the channel and electrode walls. V P

A78-48733 **Research conducted by Gaz de France on hydrogen (Les recherches menées par le Gaz de France dans le domaine de l'hydrogene)** G Donat, A Lecoanet, and J-P Roncato (Gaz de France, Paris, France) (*Association Technique de l'Industrie du Gaz en France, Congrès, Vichy, France, Sept 1977*) *Institut Français du Pétrole, Revue*, vol 33, May-June 1978, p 391-416 11 refs In French

The surveyed research suggests that thermochemical procedures for generating hydrogen from water are not likely to be competitive with electrolytic techniques, which are thought to show good prospects for improvement. Computer and economic studies of thermochemical cycles are described. The stockpiling of hydrogen in caverns or in porous geological formations is considered, and the transport and utilization of hydrogen is examined M L

A78-48813 **Development co-operation and solar energy** T Thalhammer, G Prast, J Langerhorst (Philips' Gloeilampen fabrieken, Philips Research Laboratories, Eindhoven, Netherlands), and W Floor (Ministerie van Buitenlandse Zaken, The Hague, Netherlands) *International Journal of Energy Research*, vol 2, July-Sept 1978, p 211-228 11 refs

The energy needs of some developing countries are discussed with reference to the possible use of solar energy in the period up to 1985. Various technologies are examined, and cooperative programs between industrialized and developing countries for the purpose of implementing the technologies are considered. Some recommended systems include small thermal electric generators powered by concentrated sunlight at an operating temperature of about 300 C, the principal application being for irrigation pumps in India and Pakistan, small absorber cooling systems for India and Pakistan, drinking-water purification for Niger, Pakistan, Senegal, and Upper Volta, battery-charging systems for India and Pakistan, reforestation for firewood production in the Sahel countries M L

A78-48814 **Solar wall performance** J Cash (College of Technology, Dublin, Ireland) *International Journal of Energy Research*, vol 2, July-Sept 1978, p 229-245 9 refs

The thermal behavior of small solar walls consisting of an opaque inner leaf and a transparent outer leaf is characterized. The data support application of one-dimensional heat transfer theory which describes thermal behavior in terms of the wall thermal transmittance, a solar gain factor, and an environmental temperature. Solar radiation measurements, environmental temperatures, and determinations of the average solar gain and the instantaneous solar gains are reported. Limitations of data obtained from small test units and modifications of solar wall design are considered M L

A78-48816 **Effect of nonideal conditions on the electrical performance of Faraday MHD generators** R Jayakumar, D K Goyal, S Ghosh, and V K Rohatgi (Bhabha Atomic Research Centre, Bombay, India) *International Journal of Energy Research*, vol 2, July-Sept 1978, p 265-280 18 refs

A two-dimensional analysis of the current flow in a MHD generator is used to characterize nonideal conditions in terms of internal resistance, Hall voltage, and uniformity of current distribution. In particular, the effects of (1) temperature profile along the Faraday direction in the plasma, (2) current bunching on cathode surfaces due to phenomena like arc spots, and (3) electrical leakage between adjacent electrodes due to finite resistance of the insulator segments are investigated. It is found that cold boundary layers near metallic electrode surfaces tend to relieve current concentration and that the electrical performance of a MHD generator is not adversely affected by current leakage along insulator segments for small insulator conductivities. The optimum resistivity of wedge-shaped electrodes for obtaining uniform current distribution in the duct has been calculated for various temperature profiles M L

A78-48817 **Theoretical analyses of some simple wave power devices** N A Tornqvist (Helsinki, University, Helsinki, Finland) *International Journal of Energy Research*, vol 2, July-Sept 1978, p 281-294 14 refs. Research supported by the Academy of Finland

A theoretical analysis of the hydrodynamic properties of a few ideal devices which utilize vertical energy-absorbing plates is presented. A proposed system which uses vertical elastic plates perpendicular to incoming waves is described. The system includes a rather immobile wave reflector situated about a quarter of a wavelength behind the first plate. The optimal force field is considered, the spectrum of appropriate wavelengths can be broadened by adding more swinging plates, so that efficiencies of 80-100% are theoretically attainable for a wavelength spectrum extending over an order of magnitude M L

A78-48854 **Possible similarity solutions for free convection boundary layers adjacent to flat plates in porous media** C H Johnson and P Cheng (Hawaii, University, Honolulu, Hawaii) *International Journal of Heat and Mass Transfer*, vol 21, June 1978, p 709-718 20 refs NSF Grant No GI 38319, Contract No EY-76-C-03-1093

The necessary and sufficient conditions under which similarity solutions exist for free convection boundary layers adjacent to flat plates in porous media are examined in this paper. For steady free convection it was determined that similarity solutions exist for vertical plates when the temperature difference between the wall and the environment varies according to power-law and exponential forms and for horizontal plates according to power-law forms. Also, several very specific solutions exist for unsteady free convection about flat plates in a porous medium. For a stable thermally stratified environment similarity solutions exist only for steady free convection about vertical plates (Author)

A78-48910 **Magnetic confinement fusion energy research** H Grad (New York University, New York, N Y) *International Journal of Fusion Energy*, vol 2, Summer 1978, p 3-38 31 refs Contract No EY-76-C-02-3077

Controlled thermonuclear research and magnetic fusion energy characteristics are surveyed. The contribution of mathematical analysis to an understanding of these processes is considered with attention to the stimulatory effect generated by fusion problems for

the field of pure mathematics. The present status and future projections of the extent of understanding of magnetic confinement fusion are discussed. Mathematical examples include treatment of the adiabatic problem and generalized differential equation in a simple geometry, isolation and generalized adiabatic constraints, and resistive diffusion. M L

A78-48975 The 'Windmill Case' - Facing up to appropriate technology. T J Lodge (Department of Community Development, Toledo, Ohio) *Environmental Affairs*, vol 6, no 4, 1978, p 491-510 79 refs

The 1977 NY Public Service Commission decision concerning the Windmill Case is discussed with attention to the organization of the electric utility industry and the response of the industry to innovative small-scale power-generation techniques. The Windmill Case involves generation of electricity sufficient for the inhabitants of a NYC apartment house by means of a windmill located on the building roof. While the building inhabitants, who form a co-op, did not object to the minimum demand charge imposed by the utility, the co-op did object to the minimum customer charge. The relevance of the Gainesville Utility Case is considered, the implications of the three stages of the modern electricity market are examined, and the consequences of windmill proliferation for utilities and windmill owners are explored. M L

A78-49000 Energy balance for ethyl alcohol production from crops. J G da Silva, G E Serra (São Paulo, Universidade Estadual, São Paulo, Brazil), J R Moreira, J Goldemberg (São Paulo, Universidade, São Paulo, Brazil), and J C Gonçalves. *Science*, vol 201, Sept 8, 1978, p 903-906 18 refs

Energy requirements to produce ethyl alcohol from three different crops in Brazil (sugarcane, cassava, and sweet sorghum) were calculated. Figures are presented for the agricultural and industrial phases. The industrial phase is always more energy-intensive, consuming from 60 to 75 percent of the total energy. Sugarcane is the more efficient crop for ethyl alcohol production, followed by sweet sorghum and cassava from a net energy viewpoint. The utilization of sweet sorghum stems might increase the total energy gain from this crop to almost the same level as sugarcane. Cassava has a lower energy gain at the present state of agriculture in Brazil. (Author)

A78-49038 # Dynamic characteristics of a system consisting of a free-piston diesel and an MHD generator (Dinamicheskie kharakteristiki svobodnoporshnevogo dizel'-MGD-generatora). B M Antonov, V A Bashkatov, Iu M Kirillov, I N Postnikova, S S Safonova, and E. E Shpil'rain (Akademiya Nauk SSSR, Nauchno-Issledovatel'skii Institut Vysokikh Temperatur, Moscow, USSR) *Teplofizika Vysokikh Temperatur*, vol 16, May-June 1978, p 611-619 5 refs In Russian

The paper proposes a method for calculating the dynamic characteristics of a system consisting of a free-piston diesel engine and a liquid-metal MHD generator. Results of the computation of the dynamic, thermodynamic and cost-efficiency characteristics of the system are presented for the following initial conditions: independent excitation, a channel induction of 2 T, active electrical loading, a load coefficient of 0.95, a rectangular cross section of the MHD channel of 5 mm x 20 mm, and three different piston areas, 312, 467, and 623 sq mm. B J

A78-49039 # Construction of a mathematical model of the arc-discharge operational mode of the electrodes of an MHD generator (K postroeniiu matematicheskoi modeli dugovogo rezhima raboty elektrodov MGD-generatora). L P Poberezhskii. *Teplofizika Vysokikh Temperatur*, vol 16, May-June 1978, p 620-623 12 refs In Russian

A78-49155 # Attitudes and behavior of the general public regarding different forms of energy production. C Krebsbach, J Scharioth, and I-G Schmid-Jorg. *Battelle Information (Frankfurt)*, June 1978, p 20-25.

The goals, organization, and some results of a survey to determine the attitudes of the general public towards different forms of energy production in West Germany are reported. A checklist of research topics such as 'What are the main arguments given by members of the public to substantiate their attitude for or against specific forms of energy production' is provided. The survey was conducted in Voerde on the Lower Rhine, Mannheim/Ludwigshafen, and the rural district of Emmendingen. Expressed attitudes towards nuclear power plants, coal, oil, water, gas, and sun derived energy are summarized, and factors affecting attitudes and the firmness with which these attitudes are held are examined. M L.

A78-49159 # The heat distribution in the Stechlin Lake as a result of anthropogenic effects (Die Warmeverteilung im Stechlinsee in Auswirkung anthropogener Beeinflussung). A Klamt (Meteorologischer Dienst, Forschungsinstitut für Hydrometeorologie, Berlin, East Germany) *Zeitschrift für Meteorologie*, vol 28, no 3, 1978, p 165-169 In German

With reference to a 7-year measuring series the temperature field at the water surface formed by the cooling water circuit of the nuclear power plant is described. From a comparison of the measured and the theoretical cooling curves - calculated on the assumption of the presence of heat exchange only between water surface and atmosphere - the portion of the vertical heat flux can be obtained. The influence of the stratification inside the lake and of the wind is investigated. (Author)

A78-49170 The solar timetable. D. Hayes (Worldwatch Institute, Washington, D C) *Environment*, vol 20, July-Aug 1978, p 6-13, 38, 39-36 refs

A timetable for introduction and development of solar, renewable, and electrical energy sources is presented as an attempt to describe a feasible course for moving rapidly toward increased reliance upon renewable energy. Heating and cooling of homes is discussed with attention to passive and active systems. Wood, ethanol/methanol, and methanol are considered as examples of renewable fuels. The prospects for generating electricity by hydro-power, wind power, and photovoltaic cells are examined. Attitudes and obligations required for meeting the timetable for these classes of energy sources are indicated. M.L.

A78-49171 The case for CASES. W R Powell (Johns Hopkins University, Laurel, Md.) *Environment*, vol 20, July-Aug. 1978, p 14-20, 40, 41. Contracts No W-31-109-38-3995, No. N00017-72-C-4401

The paper describes the Community Annual Energy Storage System (CASES), a computer-simulated thermal utility plan for providing the heating and cooling required by a whole community through the storage of summer heat and winter cold for use in the opposite season. Although CASES has not been put into operation, all the necessary equipment already exists and is commercially available. CASES provides cooling and heating for buildings by means of two water pipes which distribute water from cold and warm water storage facilities. Warm water produced during summer can be stored in an aquifer or, if an aquifer is unavailable, the cold water returned to the central CASES facility is heated and passed back to the community, the needed heat can be obtained from a separate water pond through the use of an ice machine. M.L.

S Suckewer and E Hinnov (Princeton University, Princeton, N.J.) *Physical Review Letters*, vol. 41, Sept 11, 1978, p 756-759 14 refs. Contract No EY-76-C-02-3073.

A78-49288 The development of beta-alumina for use in electro-chemical cells - A survey. G J May (Chloride Silent Power, Ltd, Astmoor, Ches., England) *Chemical Society, International Symposium on Molten Electrolytes and High Temperature Batteries, Brighton, England, Sept. 22, 23, 1977* *Journal of Power Sources*, vol 3, Aug 1978, p 1-22 64 refs

which describe the operational processes in the collector are considered and the efficiency of the collector is calculated. Attention is given to the possibility to use the described principle of operation also in other applications. G R

A78-49659 Oil spill recovery with magnetically retrievable sorbents - Preliminary performance report of MAG-1 A 24-foot magnetic type recovery vessel for light oils J E Turbeville In Oceans '77, Annual Combined Conference, 3rd, Los Angeles, Calif., October 17-19, 1977, Conference Record Volume 2

New York, Institute of Electrical and Electronics Engineers, Inc., Washington, D C., Marine Technology Society, 1977, p 33E-1 to 33E-6

A portable oil spill recovery vessel which incorporates magnetic principles for the retrieval process was completed in the spring of 1977. An integral part of the project was the lab research required to obtain the optimum formulation for a magnetically retrievable sorbent material. The following properties were considered to be essential for the 'ferrofoam' product: (1) high magnetic force to weight ratio, (2) positive flotation on water, (3) discriminative absorption of oil vs water even after extended periods of use, (4) high percentage of oil retention in saturated foam prior to wringing, low percentage of oil retention after wringing, (5) no significant loss of physical characteristics after continued wringing, and (6) harmless to marine life and ocean ecology. Details of ferrofoam production and of test procedures employed to analyze the essential operational functions of the recovery unit are presented. Sorbent requirements, oil recovery rates, limitations, and a cost-to-benefit analysis are discussed in detail. B J

A78-49662 Interpretation of oceanographic data for the design of ocean thermal energy conversion plants. L F Lewis (US Department of Energy, Washington, D C.) and J W Mavor, Jr (Woods Hole Oceanographic Institution, Woods Hole, Mass.) In Oceans '77, Annual Combined Conference, 3rd, Los Angeles, Calif., October 17-19, 1977, Conference Record Volume 2

New York, Institute of Electrical and Electronics Engineers, Inc., Washington, D C., Marine Technology Society, 1977, p 41B-1 to 41B-7 16 refs ERDA-supported research

The design of an OTEC plant requires oceanographic measurements at the specific site to a fine degree of detail over a time interval and with a frequency sufficient to assure optimum configuration and performance. A part of the design process is the continuous evaluation of the oceanic data and matching it to the needs of design, construction, and test. The present paper describes a program underway to assess available ocean data (pertaining to such parameters and phenomena as temperature, extreme events, waves, internal waves, biofouling, and corrosion and erosion), to design a plan and schedule to match ocean data to OTEC design, to match existing data to this plan, and to recommend a program of additional measurements. B J

A78-49663 OTEC - An emerging program of significance to the marine community C E Rudiger, Jr and L O Smith (Lockheed Missiles and Space Co., Inc., Sunnyvale, Calif.) In Oceans '77, Annual Combined Conference, 3rd, Los Angeles, Calif., October 17-19, 1977, Conference Record Volume 2

New York, Institute of Electrical and Electronics Engineers, Inc., Washington, D.C., Marine Technology Society, 1977, p. 41C-1 to 41C-7 8 refs

ERDA intends to conduct a commercial demonstration of the Ocean Thermal Energy Conversion (OTEC) concept in 1984. This paper describes the ERDA program plan leading to the demonstration, discusses some commercialization considerations, and gives special attention to two of the major steps in the plan - OTEC-1 (design of a closed-cycle power plant) and OTEC-100 (selection of hull shape). Consideration is also given to cycle efficiencies and several key marine-technology issues. Among the latter are biofouling and its potential impact on heat exchanger performance, the cold water pipe (OTEC's major ocean structure), and the heavy marine construction aspects of an OTEC plant. B J

A78-49664 Ocean thermal energy conversion heat exchanger biofouling - Strategies of control P. C. Springer (Lockheed Ocean Laboratory, San Diego, Calif.) In Oceans '77, Annual Combined Conference, 3rd, Los Angeles, Calif., October 17-19, 1977, Conference Record Volume 2

New York, Institute of Electrical and Electronics Engineers, Inc., Washington, D C., Marine Technology Society, 1977, p 41D-1 to 41D-4 6 refs.

The potential effect of biofouling on OTEC heat exchanger performance is considered. A brief review is presented of some of the candidate biofouling control systems, including chlorination, Amertap (a continuous tube-cleaning system that circulates sponge rubber balls), a shuttle brush system, biocidal soak, toxic impregnation, slurries, screening, and a number of experimental countermeasures. Factors considered in evaluating the suitability of these countermeasures for OTEC are described, and areas of research that must be addressed are identified. B J

A78-49666 Deep ocean inflatable pipe A L James (SEACO, Inc., Kailua, Hawaii) and J G Blackinton (Hawaii University, Honolulu, Hawaii) In Oceans '77, Annual Combined Conference, 3rd, Los Angeles, Calif., October 17-19, 1977, Conference Record Volume 2

New York, Institute of Electrical and Electronics Engineers, Inc., Washington, D C., Marine Technology Society, 1977, p POSTER-F-1 to POSTER-F-6 7 refs. Research supported by the University of Hawaii

The concept of a large-diameter inflatable pipe for open ocean upwelling and OTEC applications is discussed. The pipe is a double-wall, honeycombed structure of flexible material. Water fills the cavity between the walls, pressurizing this water inflates the pipe which produces a stiff structure. Cold water is pumped to the surface through the cavity bounded by the inner wall. The inflatable pipe offers the advantages of ease of installation and noncatastrophic buckling. Pipe geometry and inflation-induced loads are analyzed, and a preliminary bending analysis is performed. Model tests are compared with the analysis, substantiating the feasibility of the concept. B J

A78-49669 Generation of thermonuclear neutrons by laser action on a conical target V I Vovchenko, A S Goncharov, Iu S. Kas'ianov, O V Kozlov, I K Krasiuk, A A Maliutin, M G Pastukhov, P P Pashinin, and A M Prokhorov (Akademii Nauk SSSR, Fizicheskii Institut, Moscow, USSR) (ZHETF Pis'ma v Redaktsiiu, vol 26, Nov 5, 1977, p 628-630) JETP Letters, vol 26, Nov 5, 1977, p 476, 477 Translation

Experiments were performed on laser-beam compression of a deuterium-filled target consisting of conical cavities pressed into lead and closed with a lamsan polyester shell 5 microns thick and radius of curvature of 17 mm, the same as the dimension of the cone generator. The cone apex angle was 53 deg. The radiation was focused by a lens with $f = 30$ cm. The largest neutron yield of about 26,000 neutrons was recorded when laser radiation of energy 70 J and duration 25 nsec was focused on a target at 1 atm. An estimate shows that 8-14% of the laser radiation energy should be converted into energy of the compressed plasma. Shortening the laser pulse duration to 5 nsec while decreasing total energy to 30 J led to nearly complete vanishing of neutrons. P T H

A78-49731 # Use of a field bench for testing turbojet engines (Utilizzazione di un banco campale per la prova di turbomotori). A Russo, A Colantonio (Aeronautica Militare, Rome, Italy), and G Torella (Napoli, Università, Naples, Italy) Associazione Italiana di Aeronautica e Astronautica, Congresso Nazionale, 4th, Milan, Italy, Sept 19-23, 1977, Paper 48 p 7 refs. In Italian

The paper describes the use of a field test bench for taking measurements of the thermodynamic cycle of aircraft turbojet engines. The guiding concept in selecting the instrumentation was to use a minimum of sensors without sacrificing measurement accuracy and reliability. Two attached sensors were used, consisting of two thermocouples, of which one furnished data on the static temperature downstream of the compressor and the second measured the static temperature downstream of the turbine. The test bench, sensor, and other instrumentation are described, and the method of determining the cycle from the measurements is explained. P T H

A78-49781 * # A laser-powered flight transportation system A Hertzberg, K C Sun (Washington, University, Seattle, Wash), and W S Jones (Lockheed Missiles and Space Co, Inc, Palo Alto, Calif) *American Institute of Aeronautics and Astronautics, Aircraft Systems and Technology Conference, Los Angeles, Calif, Aug 21-23, 1978, Paper 78-1484* 31 p 28 refs Grant No NGL-49 002 044

Laser energy transmitted from a solar-power satellite via a set of relay satellites is used to power a cruising air transport, i.e., a laser-powered airplane. The result is a nearly fuelless pollution-free flight transportation system which is cost competitive with the fuel-conservative airplane of the future. The major components of this flight system include a laser-power satellite, relay satellites, laser-powered turbofans, and a conventional airframe. The relay satellites are orbiting optical systems which intercept the beam from a power satellite and refocus and redirect the beam to its next target. (Author)

A78-49802 * # The solar power satellite concept - A space program perspective. C C Kraft, Jr (NASA, Johnson Space Center, Houston, Tex) *Journal of Energy*, vol 2, July-Aug 1978, p 193-195

The Space Shuttle will reduce the cost of transportation to space from thousands of dollars per pound to hundreds of dollars per pound. Studies of future systems indicate that these costs may be further reduced to tens of dollars per pound by using large space freighters, which would be required to build solar power satellites. It is pointed out that the Space Shuttle will provide a versatile tool in the 1980's to support the exploration of the solar power satellite concept as well as other space programs of the future. Three apparently different applications, related to materials processing in space, advanced satellite communications, and solar power satellites, have a number of common requirements. These include the need for large solar power arrays in space and/or the need to construct large systems in space. Consequently, a space program which includes development of the techniques for large power supplies and structural systems provides the basis for selecting and implementing any or all of these promising applications. G R

A78-49803 * # SPS cost considerations. G R Woodcock (Boeing Aerospace Co, Ballistic Missiles and Space Div., Seattle, Wash) *Journal of Energy*, vol 2, July-Aug. 1978, p. 196-202. Contract No NAS9-15196.

Recent solar power satellite (SPS) system definition studies have emphasized cost estimation for the operational phase of an SPS program, in order to assess economic practicality of SPS. A cost analysis approach is described. Cost results for a silicon photovoltaic SPS are reported, showing SPS costs from \$1700 to \$2700 per kilowatt and busbar power costs from 3 cents to 7 cents per kilowatt-hour. Rationales behind the estimates are discussed. (Author)

A78-49805 # Particle trajectories in swirling flows. R P. Dring and M Suo (United Technologies Research Center, East Hartford, Conn). *Journal of Energy*, vol 2, July-Aug 1978, p. 232-237 8 refs

The ability to utilize fuels which form particulate matter upon combustion (e.g., coal) in a gas turbine depends in part upon an understanding of the nature of particle trajectories in swirling flows. Although a number of investigators have studied specific flows or developed specific computational methods for particle trajectories in swirling flows, none have obtained solutions which are general in nature. In this paper a series of exact general solutions for trajectories of spherical particles in free-vortex swirling flow have been obtained in the absence of aerodynamic lift phenomena. As would be expected from related works, it has been found that for low particle Reynolds numbers (Stokes flow) the degree to which a particle either follows the flow streamlines or is centrifuged out across them is essentially described by a single dimensionless parameter, the Stokes number. For higher particle Reynolds numbers

the results can be presented in terms of two relevant parameters, one of which may be the Stokes number. Furthermore, even in this latter case the results indicate that the Stokes number is the dominant parameter. Based on these results a number of conclusions have been drawn on the nature of particle trajectories in turbine airfoil passages, and in centrifugal separators. (Author)

A78-49808 # Assessment of energy conservation using solar energy in Kansas. J T Pytlinski (New Mexico State University, Las Cruces, N Mex). *Journal of Energy*, vol 2, July-Aug 1978, p 250-253 7 refs

The continuous depletion of fossil fuels has created a situation which demands a gradual replacement of quickly depletable resources by nondepletable resources such as solar energy. Growth of the use of solar energy systems is related to several factors such as solar energy rights, system cost-effectiveness, availability of data actually tested for construction costs, maintenance requirements, and system reliability, integration of solar energy facilities into utilities load-management planning, and local and federal incentives, which when put together, control solar energy devices deployment. Several solar bills active in Kansas induce citizens in the state to use solar energy. A study of energy conservation in Kansas by using solar energy is conducted. It is concluded that although solar energy growth at present is impressive, solar energy will contribute little to energy conservation in the state by 1980. It is recommended to consider steps related to a mandatory use of solar energy in new state and federal buildings, and the mandatory use of solar energy in new dwellings when technically feasible. G R

A78-49838 Some preliminary results on the performance of a small vertical-axis cylindrical wind turbine. G Ahmadi (Pahlavi University, Shiraz, Iran) *Wind Engineering*, vol 2, no 2, 1978, p 65-74. 20 refs. Research supported by the Pahlavi University.

The performance of a newly developed small vertical-axis wind turbine with two sail blades is described. The model design is explained, and the effect of wind velocity and various blade angle settings on the power coefficient is studied. Maximum power coefficients for various conditions are plotted. Although the maximum efficiency of the model is only about 7%, it is suggested that the use of this wind energy convertor in remote rural areas of developing countries might be feasible due to the simplicity of the blade design and the relatively low cost of construction. M L.

A78-49839 Model and prototype performance characteristics of Savonius rotor windmill. M H Khan (Illinois, University, Urbana, Ill) *Wind Engineering*, vol. 2, no 2, 1978, p 75-85. 7 refs. Research supported by the Ford Foundation.

Model tests were conducted in a wind tunnel to arrive at an optimum configuration of Savonius rotor windmill. Effects of three design parameters, namely rotor shape, overlap between rotor blades, and separation gap between rotor blades, on the operating characteristics were studied. Rotor models with different combinations of the variable parameters were tested under three wind velocities to determine the configuration which would provide the best relative performance. From this study it was found that the optimum configuration was different from the standard Savonius design not only in the blade shape but also in the overlap distance between blades. On the basis of the results obtained from model tests, a prototype unit based on the optimum design configuration was built and tested on an open site. Results obtained from the tests of the full scale design are encouraging. The results have corroborated some of the original findings of Savonius. (Author)

A78-49840 Optimum design point geometry and performance of propeller type wind turbines. N H Juul (New York, State University, Buffalo, N.Y.). *Wind Engineering*, vol 2, no 2, 1978, p 86-102. 6 refs

The simple strip theory is used to develop the equations which are required to determine the optimum design point geometry and performance parameters of propeller type wind turbines. The optimum design point is defined by the conditions which maximize the power absorbed by each blade element along the blade. A

computer program is developed to calculate, for a given airfoil, the dimensionless optimum design point performance. The behavior of the important local and total turbomachinery parameters are studied. The range of tip speed ratios for which the strip theory is applicable is determined. The effects of viscosity, compressibility and tip losses are investigated. As an example, the results for wind turbines with NACA 4312 blades are presented graphically. These graphs may be used to choose the design point best suited for a desired application.

A78-49841 Improvement of windmill efficiency by boundary layer control. J. S. Montes (Tasmania, University, Hobart, Australia). *Wind Engineering*, vol. 2, no. 2, 1978, p. 103-114. 7 refs.

The desirability of using boundary layer suction to increase the efficiency of conventional windmills is discussed. The rotation of the windmill blades provides a source of internal flow which can be utilized as a simple pump for the boundary layer suction, and a simplified mathematical model of the internal flow is presented. Equations are integrated numerically for some assumed values of the windmill geometrical parameters, and it is shown that, if certain conditions are assumed, advantages of some 20% in the operational efficiency of a variable pitch windmill and 33% for the fixed-pitch windmill can be obtained.

A78-49842 The application of small wind powered generators in telecommunications and other high reliability systems. A. J. A. Hinsley and D. A. D. Smith (Pye Telecommunications, Ltd., Cambridge, England). *Wind Engineering*, vol. 2, no. 2, 1978, p. 115-126. 9 refs.

The use of 2-kW wind-powered generators of proven design to provide a highly reliable source of power for radio communication is discussed. Australian experience in using wind generators to provide power for remote sites is surveyed, and power requirements for different purposes are calculated. Engineering of systems is considered, and the total cost of wind-power generators, tower, energy storage, control equipment, and necessary buildings and foundations is estimated to be in the order of 8500 British pounds to supply a load of 200 watts. This form of wind-powered generation is economically justifiable only if the expenses involved in providing a connection with a cheap electricity source are considered in comparison.

A78-49849 Potential lithium requirements for fusion power plants. J. N. Hartley, B. F. Gore, and J. R. Young (Battelle Pacific Northwest Laboratories, Richland, Wash.). *Energy* (UK), vol. 3, June 1978, p. 337-346. 16 refs.

The use of lithium by fusion power plants is discussed, and it is estimated that a 1000-GWe generating capacity (twice current U.S. generating capacity) would require 400,000 to 1,200,000 metric tons of natural lithium. While U.S. supplies of lithium are considered sufficient, the rate of increase in U.S. production would have to be accelerated to meet the expected demand. The fusion process is surveyed, and the fusion fuel requirements are examined with attention to fuel consumption by fusion reactions, fuel consumption due to blanket requirement, and blanket inventory requirements. The economics and feasibility of increasing the rate of lithium production are discussed.

A78-49948 Design of solar heating and cooling systems for nonresidential buildings in the east north central region of the United States. R. K. Newman (Dayton, University, Dayton, Ohio). In *NAECON '78, Proceedings of the National Aerospace and Electronics Conference*, Dayton, Ohio, May 16-18, 1978. Volume 2. New York, Institute of Electrical and Electronics Engineers, Inc., 1978, p. 862-867.

Descriptions of various solar heating and cooling projects in an area in which 60 percent of the U.S. population lives are given with emphasis on the Troy-Miami County Library system which was put in operation this past winter. Instrumentation and control strategies for the various modes of operation are discussed for this system, the Columbus Technical Institute Phase V, and the Stark County Library

buildings which will provide both solar heating and cooling. The use of solar energy to provide a large quantity of domestic hot water, swimming pool heat, and assistance to heat pumps is discussed with respect to the Deer Creek Lodge solar project. Brief descriptions of solar heating systems for a Dayton Fire Station and a Mound Laboratories building are also given.

A78-49949 Research in the electrofluid dynamic /EFD/ wind driven generator. J. E. Minardi and M. O. Lawson (Dayton, University, Dayton, Ohio). In *NAECON '78, Proceedings of the National Aerospace and Electronics Conference*, Dayton, Ohio, May 16-18, 1978. Volume 2. New York, Institute of Electrical and Electronics Engineers, Inc., 1978, p. 869-873. 8 refs. Contract No. EY-76-S-02-4130.

The Electrofluid Dynamic (EFD) wind driven generator directly converts wind energy to electrical energy without moving parts. Conventional wind turbines are currently limited in size, with the greatest diameter presently envisaged being 300 to 400 feet. For the EFD wind driven generator there are no fundamental reasons to restrict the size, therefore, economics of scale and far larger powers than conventional systems can be realized. Analyses predict favorable performance characteristics for EFD wind generators, however, specific experimental data have been lacking. Research areas presently being emphasized are discussed and performance of experimental arrays being conducted in an Eiffel-type wind tunnel are also discussed.

A78-49950 A low cost aerodynamic heater representing a fully matched load for wind energy systems. M. O. Lawson (Dayton, University, Dayton, Ohio). In *NAECON '78, Proceedings of the National Aerospace and Electronics Conference*, Dayton, Ohio, May 16-18, 1978. Volume 2. New York, Institute of Electrical and Electronics Engineers, Inc., 1978, p. 874-880.

The aerodynamic heater described operates on fluid dynamic principles as does the wind turbine. This relation makes it possible to operate the wind turbine at its optimum tip speed to wind velocity ratio up to the wind turbine rate value. The heater resembles a centrifugal blower shaped like a disk 12-inches in diameter by 4-inches thick. A sketch is provided of a heater which consists of a sheet metal case having an air intake port at the center of one circular face, and an air outlet along the perimeter. An internal rotor with blades around its circumference, an internal toroidal air passage with stator blades, and a variable outflow butterfly-valve to regulate temperature are the other components. The aerodynamic heater system may consist of a fixed-pitch wind turbine mounted on a tower along with a step-up transmission to match the torque characteristics of the wind turbine and the heater.

A78-49961 Modeling refinements for the rectified superconducting alternator. T. A. Stuart (Toledo, University, Toledo, Ohio) and M. W. Tripp (Detroit Edison Co., Detroit, Mich.). In *NAECON '78, Proceedings of the National Aerospace and Electronics Conference*, Dayton, Ohio, May 16-18, 1978. Volume 3. New York, Institute of Electrical and Electronics Engineers, Inc., 1978, p. 1002-1009. 10 refs. Grants No. AF-AFOSR-76-2997, No. AF-AFOSR-77-3413.

Certain characteristics of an earlier steady state model developed by Stuart and Tripp (1977) for the rectified superconducting alternator are examined. The earlier approach involved the derivation of a set of five nonlinear equations, these equations were then solved via a standard Newton-Raphson algorithm, and the solution was used to evaluate several other variables. The present paper carries out an analysis which shows that the earlier model can be improved by eliminating an ambiguity associated with the ac field current and by reducing the number of system equations from five to two. Data are included to show that the modified equations are consistent with the earlier model.

A78-50126 Pacific Chemical Engineering Congress, 2nd, Denver, Colo., August 28-31, 1977, Proceedings Volumes 1 & 2 Congress sponsored by the Inter-American Confederation of Chemical Engineering and Asian Pacific Confederation of Chemical Engineering New York, American Institute of Chemical Engineers, 1978 Vol 1, 732 p., vol 2, 711 p. Price of two volumes, \$35

The Congress places emphasis on chemical processes of energy development and pollution control. Consideration is given to reuse and treatment of industrial waste water, utilization of cellulosic materials in unconventional food production, SO₂ stack gas scrubbing technology, environmental aspects of shale oil production and processing, advances in petroleum and petrochemical technology in the Pacific, forest residuals for the production of chemicals and energy, and filtration and magnetic separation for liquified coal and other liquids. The following topics are also examined: biochemical sources of energy, the environmental aspects of coal conversion, status and prospects of unconventional fuels, environmental aspects of tar sands processing, and the design and industrial applications of fluidized bed reactors. B J

A78-50128 Potential and economics of energy production by bioconversion E C Clausen, O C Sitton, and J L Gaddy (Missouri-Rolla, University, Rolla, Mo.) In Pacific Chemical Engineering Congress, 2nd, Denver, Colo., August 28-31, 1977, Proceedings Volume 1 New York, American Institute of Chemical Engineers, 1978, p. 183-186. 16 refs

It is estimated that approximately one-fourth of the total energy requirement of the United States could be met by using present farming techniques on idle lands to produce biomass and by utilizing biomass from agricultural wastes. Conversion of biomass to methane can be accomplished through the process of anaerobic digestion. It is concluded that bioconversion of plant matter to methane is economically attractive at today's fossil fuel prices. Based on present technology, a reasonable return could be expected with a gas price of \$2/MSCF. B J

A78-50130 Flue gas desulfurization and other options F T Princiotta (U.S. Environmental Protection Agency, Washington, D.C.) In Pacific Chemical Engineering Congress, 2nd, Denver, Colo., August 28-31, 1977, Proceedings Volume 1 New York, American Institute of Chemical Engineers, 1978, p. 256-260. 6 refs

Present-day options for utilizing coal to produce electricity consistent with sulfur oxide emission regulations are limited to obtaining low-sulfur coal, employing flue gas desulfurization (FGD) and in some cases physically cleaning the coal. Other emerging technologies which may be competitive with FGD in the early to mid 1980 period include fluidized bed combustion (atmospheric and pressurized), coal gasification (steam and combined cycles) and coal liquefaction. (Author)

A78-50133 Sulfur dioxide removal at Salt River Project's Coronado Generating Station G E Palomino and A G Sassi (Bechtel Power Corp., Los Angeles, Calif.) In Pacific Chemical Engineering Congress, 2nd, Denver, Colo., August 28-31, 1977, Proceedings Volume 1 New York, American Institute of Chemical Engineers, 1978, p. 276-283

A78-50134 Critical analysis of sulfur dioxide removal systems for power generation applications J M Slaminski (U.S. Naval Construction Battalion Center, Civil Engineering Laboratory, Port Hueneme, Calif.) and D W Christian (Public Service Company of New Mexico, Albuquerque, N. Mex.) In Pacific Chemical Engineering Congress, 2nd, Denver, Colo., August 28-31, 1977, Proceedings Volume 1 New York, American Institute of Chemical Engineers, 1978, p. 284-294. 7 refs

Seven commercial processes for extracting sulfur dioxide from steam or steam-electric generating plants are analytically compared. The operation and economics of lime and limestone slurry scrubbing, dilute and concentrated double alkali, and dilute sulfuric acid

processes with gypsum disposal products, are contrasted with sodium sulfite/bisulfite and activated char sulfur recovery systems. Each process is critically analyzed to yield system flow and operating expenses, including equipment power consumption, product disposal costs or credits, reagent requirements and operating and maintenance costs. The laws for scaling these results to any given plant capacity and coal sulfur content are developed and parametrically graphed. This information is an invaluable guide for the Navy or utility engineer to perform accurate system evaluations with ease. (Author)

A78-50135 Interface design problems between coal fired boilers and SO₂ scrubbing systems J D Ferrell and E W Stenby (Stearns-Roger, Inc., Denver, Colo.) In Pacific Chemical Engineering Congress, 2nd, Denver, Colo., August 28-31, 1977, Proceedings Volume 1 New York, American Institute of Chemical Engineers, 1978, p. 295-302

For the past five to ten years, an accelerated engineering effort has been expended for the purpose of developing sulfur dioxide (SO₂) removal systems capable of treating the flue gases produced in coal-fired, steam/electric generating stations. As a result of these activities, there are now commercially available ten to twenty systems which can meet the needs of the Utility Industry. Although each of these systems is characterized by certain unique equipment designs and operating parameters, they also have in common many interfaces with the boiler system and operation. This paper presents an overview of the interactions of the boiler operation on the scrubber and vice versa. Special emphasis is placed on recent developments in applying sulfur dioxide scrubbers to large coal-fired steam generators. Where possible, the adverse operations experienced in these systems are highlighted. (Author)

A78-50136 Flue gas desulfurization in venturi scrubbers and spray towers F Bondor, J Englick, and A Saleem (Chemico Air Pollution Control Co., New York, N.Y.) In Pacific Chemical Engineering Congress, 2nd, Denver, Colo., August 28-31, 1977, Proceedings Volume 1 New York, American Institute of Chemical Engineers, 1978, p. 303-307

One of the major contributors of sulfur dioxide emissions in the atmosphere today is the combustion of sulfur-bearing fossil fuels, such as those used in industrial boilers and power generating stations. These two sources account for approximately 77% of the total sulfur dioxide emissions in the United States. Enactment of sulfur dioxide emission regulations in the developed countries of the world in recent years has spurred the development of the broad range of systems for sulfur dioxide emission control. Wet scrubbing with alkali chemisorbents in water has emerged as the most widely used means of accomplishing this purpose. This paper presents a review of the commercial development of wet scrubbing processes for flue gas desulfurization in the U.S. with particular emphasis on the use of lime/limestone alkali slurries in venturi and spray tower absorbers. (Author)

A78-50137 A review of the preliminary operating results of the flue gas desulfurization unit at the Valmont Generating Station S W Goering (Public Service Company of Colorado, Denver, Colo.) and R E Nilan (Stearns-Roger, Inc., Denver, Colo.) In Pacific Chemical Engineering Congress, 2nd, Denver, Colo., August 28-31, 1977, Proceedings Volume 1 New York, American Institute of Chemical Engineers, 1978, p. 316-322

A78-50141 Design of a spray tower scrubber for Coal Creek Station J R Martin (Combustion Engineering, Inc., Windsor, Conn.), R W Dutton (Black and Veatch Consulting Engineers, Kansas City, Mo.), D C Kettner (United Power Association, Elk River, Minn.), and W W Hickok (Cooperative Power Association, Minneapolis, Minn.) In Pacific Chemical Engineering Congress, 2nd, Denver, Colo., August 28-31, 1977, Proceedings Volume 1 New York, American Institute of Chemical Engineers, 1978, p. 389-394

Coal Creek Station is a two-unit 1000-MW generating plant being constructed in N. Dakota. The present paper describes the

design and operational features of the spray tower scrubber system designed to control sulfur dioxide emissions from the power plant, which burns low-sulfur lignite. Plant design considerations which influence the cleaning and dispersal of combustion gases are presented. Some of the features of the scrubber system designed to meet the requirements imposed by the plant design are high-efficiency spray tower absorbers, use of alkali in fly ash, and scale control. B J

A78-50142 Factors that influence the leaching of organic material from in situ spent shale. G. Amy and J. Thomas (California, University, Berkeley, Calif.) In *Pacific Chemical Engineering Congress, 2nd, Denver, Colo., August 28-31, 1977, Proceedings Volume 1*. New York, American Institute of Chemical Engineers, 1978, p. 398-402. Research sponsored by the U.S. Department of the Interior and ERDA.

A series of batch and continuous flow experiments were run in order to assess the potential for contamination of groundwater by organic material leached from in situ spent shale. The specific objectives of these experiments were to (1) estimate the concentration of organic material present in leachate derived from various types of in situ spent shale, and (2) identify variables that affect the concentration of organic material in leachate. Concentrations of total organic carbon (TOC) as high as 50 milligrams per liter were detected during experimentation. Factors that significantly influenced the concentration of organic material present in leachate included (1) retorting conditions associated with spent shale, (2) spent shale particle size, (3) water temperature, and (4) leaching time. (Author)

A78-50143 Sorption of SO₂ on spent shale in packed beds. M. A. Hasanain, A. L. Hines, C. L. Murphy (Colorado School of Mines, Golden, Colo.), and J. J. Duvall (U.S. Department of Energy, Laramie Energy Research Center, Laramie, Wyo.) In *Pacific Chemical Engineering Congress, 2nd, Denver, Colo., August 28-31, 1977, Proceedings Volume 1*. New York, American Institute of Chemical Engineers, 1978, p. 416-421. 6 refs. Contract No. E(29-2)-3780.

Adsorption studies of SO₂ have been carried out on spent shale that was retorted at temperatures ranging from 300 to 1000 deg C. A chemical analysis and an X-ray diffraction analysis of all retorted samples were made. In addition, breakthrough curves of SO₂ on spent shale are presented along with the calculated isotherm. (Author)

A78-50144 Should anaerobic digestion - for methane gas recovery - be included in a sludge treatment process utilizing incineration? L. Hamer (Passavant Corp., Birmingham, Ala.) In *Pacific Chemical Engineering Congress, 2nd, Denver, Colo., August 28-31, 1977, Proceedings Volume 1*. New York, American Institute of Chemical Engineers, 1978, p. 698-702.

The paper examines the economic feasibility of using anaerobic digestion and incineration in the treatment of a municipal primary/waste-activated sludge stream. It is shown that the process which utilizes anaerobic digestion and incineration has a cost per ton of treated sludge considerably greater than either of those which do not employ digestion. Moreover, the sludge conditioning cost-reduction realized by using the incinerator ash as an admix agent sufficiently offsets other somewhat greater expenses. B J

A78-50145 Technical and economical feasibility of biomass utilization as energy source in California. V. Cervinka (California State, Dept. of Food and Agriculture, Sacramento, Calif.) In *Pacific Chemical Engineering Congress, 2nd, Denver, Colo., August 28-31, 1977, Proceedings Volume 2*. New York, American Institute of Chemical Engineers, 1978, p. 752-758. 11 refs.

The potential overall biomass resource of California, including crop residues, dairy and feedlot waste, food processing industry waste, and municipal solid waste, is estimated to be 1.570×10 to the 7th dry tons per year. The heat content value of this resource is 1.11648×10 to the 10th J/ton, the gasification efficiency is 62, the energy equivalent value of gas generated is 1.0861×10 to the 17th

J/year. To make California agriculture self-supporting, the remaining 55% of total energy required for food production can be potentially generated from crops grown as renewable energy resources. B J

A78-50146 Biochemical routes to energy recovery from municipal wastes. A. J. Klee and C. J. Rogers (U.S. Environmental Protection Agency, Municipal Environmental Research Laboratory, Cincinnati, Ohio.) In *Pacific Chemical Engineering Congress, 2nd, Denver, Colo., August 28-31, 1977, Proceedings Volume 2*. New York, American Institute of Chemical Engineers, 1978, p. 759-764. 15 refs.

After analyzing the weaknesses of the conventional process to produce methane from the anaerobic digestion of municipal solid wastes, three pretreatment approaches are described and compared: alkali pretreatment, enzymatic hydrolysis, and acid hydrolysis. The major findings are that alkali pretreatment is effective and holds promise particularly for small-scale operations, and that recent advances in acid hydrolysis make it a significant and economically attractive technology for energy, chemical, and food production. (Author)

A78-50147 Survey of pyroconversion processes for biomass. T. B. Reed (Synthetic Fuel Research Center, Concord, Mass.) In *Pacific Chemical Engineering Congress, 2nd, Denver, Colo., August 28-31, 1977, Proceedings Volume 2*. New York, American Institute of Chemical Engineers, 1978, p. 765-768. 12 refs.

The chemistry, thermodynamics, and process steps of the pyroconversion of biomass are described. Consideration is given to chemical reactions of biomass, char reactions and charcoal production, pyrolytic oil production, and gasification, hydrogenation, and combustion of biomass. The biomass can be burned directly for heat, or it can be converted to solid, liquid or gaseous synthetic fuels. B J

A78-50148 Multi-stage digestion to fuel gas of municipal solid waste. D. L. Wise, R. L. Wentworth, D. C. Augenstein (Dynatech R/D Co., Cambridge, Mass.), and C. L. Cooney (MIT, Cambridge, Mass.) In *Pacific Chemical Engineering Congress, 2nd, Denver, Colo., August 28-31, 1977, Proceedings Volume 2*. New York, American Institute of Chemical Engineers, 1978, p. 769-776. 14 refs. Research supported by the Consolidated Natural Gas Service Co.

Multistage digestion experiments on shredded municipal solid waste were carried out with the aim of developing improved practical processing systems for solid waste. The multistage digestion process is primarily one of separating two broad groups of microorganisms, namely, the acid formers which solubilize cellulosic materials to organic acids, and the methane formers which convert the solubilized materials to fuel gas. The acid forming step was accomplished using a plug flow digester system of up to 10 individual reactors in series. When solubilized breakdown products were used as feed material to the second stage or methane forming reactor, conversion to fuel gas at high methane content was achieved. B J

A78-50149 Environmental factors for Fischer-Tropsch coal conversion technology. J. B. O'Hara, B. I. Loran, A. Bela, and N. E. Jentz (Ralph M. Parsons Co., Pasadena, Calif.) In *Pacific Chemical Engineering Congress, 2nd, Denver, Colo., August 28-31, 1977, Proceedings Volume 2*. New York, American Institute of Chemical Engineers, 1978, p. 855-863. 8 refs. ERDA-supported research.

The environmental factors of a conceptual commercial Fischer-Tropsch coal conversion plant are discussed. The Fischer-Tropsch process, which converts coal into gaseous and liquid hydrocarbons, is briefly reviewed. The removal of sulfur and particulates from the syngas generated, the sulfur balance of the conversion process, and the quantity and types of effluent streams projected to be released are described. Estimated air emissions and aqueous effluents are compared with applicable standards and found capable of meeting the present and projected regulations. The fate of trace elements present in the coal and occupational safety aspects are also briefly considered. (Author)

A78-50150 Conversion of western U.S. coals to liquid products. R. H. Wolk, H. E. Lebowitz, W. C. Rovesti, and N. C. Stewart (Electric Power Research Institute, Palo Alto, Calif.) In Pacific Chemical Engineering Congress, 2nd, Denver, Colo., August 28-31, 1977, Proceedings Volume 2 New York, American Institute of Chemical Engineers, 1978, p. 900-907. 15 refs.

Information is reviewed on yields and operating conditions based on Wyodak, Amox, Kaiparowitz, and Black Mesa subbituminous coals. These are compared with results from eastern coals. Recent information on early reaction chemistry for Wyodak coal is also presented and compared to similar results with bituminous coal. The formation of calcium-rich solids has been noted in several of the test programs. Several speculative flowsheets are presented which combine hydrogenation, residue gasification, and solids separations in new ways with the aim of lowering liquid product cost. B. J.

A78-50151 The SRC-II process. B. K. Schmid and D. M. Jackson (Gulf Mineral Resources Co., Denver, Colo.) In Pacific Chemical Engineering Congress, 2nd, Denver, Colo., August 28-31, 1977, Proceedings Volume 2 New York, American Institute of Chemical Engineers, 1978, p. 908-915. 5 refs.

SRC-II is an improved version of the Solvent Refined Coal process. The primary product of this advanced process is an ashless distillate fuel containing less than 0.4% sulfur, in contrast to the solid fuel produced in the original version of the process. Additional products of SRC-II are pipeline gas, LPG, a light distillate liquid, phenols, and ammonia. With the completion of pilot scale development work, the SRC-II process will be ready for commercial-scale demonstration. A demonstration program is proposed using full-scale equipment in a single process module plant which could eventually be incorporated in a commercial facility. B. J.

A78-50152 Recovery and utilization of extreme low temperature geothermal energy in Korea. H. D. Yoo (Korea Advanced Institute of Science, Seoul, South Korea) In Pacific Chemical Engineering Congress, 2nd, Denver, Colo., August 28-31, 1977, Proceedings Volume 2 New York, American Institute of Chemical Engineers, 1978, p. 923-929. 14 refs. Research supported by the Korea Advanced Institute of Science.

The recovery of low temperature geothermal energy (40-80°C) in Korea is investigated by injecting air seasonally for local community heating without heat exchangers, when a gas storage development is planned. A preliminary design was conducted to study the feasibility of the scheme. Safety, economics, reserve estimation, and aquifer dynamics were studied. Other recovery methods and power generation have been briefly reviewed. Conversion to a small gas storage system upon depletion of geothermal energy, because of Korea's pressing need for underground storage system and the overall economic advantage, plays a very significant role to make the energy recovery attractive. (Author)

A78-50153 Impact of solar heating and cooling on electric utilities. R. Llavin, Jr. and J. A. Bonnet, Jr. (Puerto Rico Water Resources Authority, San Juan, P.R.) In Pacific Chemical Engineering Congress, 2nd, Denver, Colo., August 28-31, 1977, Proceedings Volume 2 New York, American Institute of Chemical Engineers, 1978, p. 1068-1075.

The impact of solar heating and cooling on an electric utility was assessed in terms of the effect of this load on the generating system, transmission system, and corporate financial structure during the next ten years. Heating and cooling loads were defined in terms of their number, their energy consumption, and their load pattern. Estimates of these loads were validated through load survey measurements on a selected statistical sample of customers. The effect of solar heating and cooling on the utility was found to be relatively minor although a revision of the existing rate structure will probably be required within three or four years. (Author)

A78-50154 Evaluation of a commercial-scale hydrocarbonization process to produce clean char, oil, and pipeline gas from coal. J. M. Holmes, D. A. Dyslin, M. S. Edwards, D. S. Joy, G. R. Peterson, C. B. Smith, and P. M. Lantz (Oak Ridge National Laboratory, Oak Ridge, Tenn.) In Pacific Chemical Engineering Congress, 2nd, Denver, Colo., August 28-31, 1977, Proceedings Volume 2 New York, American Institute of Chemical Engineers, 1978, p. 1081-1087. 17 refs. ERDA-sponsored research.

This preliminary design and an economic evaluation of a hydrocarbonization facility include: (1) beneficiation of the coal feed, (2) coal hydrocarbonization to produce char, oil, and pipeline gas fuels, (3) fluid-bed combustion for steam and power generation, (4) liquid product hydrotreating, and (5) treatment of all plant effluents. A discounted cash flow analysis assuming 100% equity financing, 12% return on equity, and coal priced at \$20/ton resulted in a product fuel price of \$3.15/million Btu. An alternative system, in which the char is utilized as fuel for a power plant and a coal mine is included, demonstrated that for a power cost of 30 mills/kWhr and a gas price of \$3.50/MSCF, the oil price would be \$12.50/bbl using utility financing. (Author)

A78-50155 The Pacific area energy supply/demand outlook - The next fifteen years versus now. J. A. West (Federal Energy Administration, Washington, D.C.) In Pacific Chemical Engineering Congress, 2nd, Denver, Colo., August 28-31, 1977, Proceedings Volume 2 New York, American Institute of Chemical Engineers, 1978, p. 1092-1097.

The Pacific region's current and evolving energy situation is evaluated and assessed in terms of its associated economic and political implications. The Pacific area is expected to continue as an energy deficit area through 1990. Total primary energy requirements (TPE) are forecast to grow at about 6 percent per annum and reach 26.6 million barrels per day of oil equivalent in 1990. Oil, largely from other sources, will remain the primary fuel consumed in the area and account for nearly two-thirds of projected TPE. As in the past, Japan will remain the largest energy user and account for over two-thirds of the region's forecasted 1990 crude oil imports of 14 million barrels per day and about 57 percent of the region's forecasted TPE. Higher world energy prices will dampen demand and stimulate the development of alternative energy sources in the area. Steam coal and nuclear energy offer good supply prospects in the post-1985 period. (Author)

A78-50157 Application of best practicable technology in air pollution control for the Syncrude project. R. R. Goforth (Syncrude Canada, Ltd., Edmonton, Alberta, Canada) In Pacific Chemical Engineering Congress, 2nd, Denver, Colo., August 28-31, 1977, Proceedings Volume 2 New York, American Institute of Chemical Engineers, 1978, p. 1287-1294. 9 refs.

The Syncrude project in northeastern Alberta, requiring the mining of 83,000,000 tonnes of tar sand feed per year, is designed to produce 125,000 barrels a day of synthetic crude. The air pollution control facilities in the Syncrude project are reviewed in terms of 'best practicable technology' criteria, which involve three basic requirements: (1) environmental need, (2) demonstrated technological and economic feasibility, and (3) acceptable overall project economics including consideration of energy and environmental costs. B. J.

A78-50221 * # Attitude control of large solar power satellites. R. E. Ogilvie (Rockwell International Corp., Downey, Calif.) In Guidance and Control Conference, Palo Alto, Calif., August 7-9, 1978, Technical Papers New York, American Institute of Aeronautics and Astronautics, Inc., 1978, p. 571-578. 14 refs. Research supported by the Rockwell International Corp., Contract No. NAS8-32475 (AIAA 78-1266).

Satellite power systems are a promising future source of electrical energy. However, the very large size solar power satellites (relative to contemporary spacecraft) requires investigation of the resulting attitude control problems and of appropriate control techniques. The principal effects of the large size are a great increase

in sensitivity to gravity-gradient torques and a great reduction in structural bending frequencies with the attendant likelihood of undesirable control system interaction. A wide variety of control techniques are investigated to define approaches that minimize implementation penalties. These techniques include space-constructed momentum wheels, gravity-gradient stabilization, quasi-inertial free-drift modes, and various reaction control thruster types, some of which reduce the implementation penalties to a few percent of the spacecraft mass. The control system/structural dynamic interaction problem is found to have a tractable solution. Some of the results can be applied to other large space structure spacecraft.

A78-50251 Chances for exotics - Regenerable energy sources (Chance für Exoten - Regenerierbare Energiequellen). U. Kaier (Kraftanlagen AG, Heidelberg, West Germany) *Energie*, vol 30, July 1978, p 219-223. In German.

Characteristics of several forms of regenerable energy - moving water, earth heat, solar radiation, biochemical processes, and wind - are briefly surveyed. Other topics include energy storage and the generation of electricity from sunlight. Costs and prospects of development are considered in some cases. M. L.

A78-50252 Oil shale - Power source and raw material (Ölschiefer - Energieträger und Rohstoff). *Energie*, vol 30, July 1978, p 224-227. In German.

The 'Rohrback' direct combustion procedure for obtaining both energy and a raw material for cement manufacture from oil shale is described. Combustion occurs rapidly in a fluidized bed oven kept at 800-850 C. Pulverization, preheating, role of the waste-heat boiler, and treatment of the clinker are described, and the economics of the process is examined. M. L.

A78-50253 Cold energy (Die 'kalte' Energie). D. Weber (Gutehoffnungshütte Sterkrade AG, Oberhausen, West Germany) *Energie*, vol 30, July 1978, p 238-241. In German.

A procedure for obtaining low-cost electricity by using evaporated LNG to drive gas turbines in a closed process is proposed. The gas turbine in conjunction with a diesel motor would be located at an LNG terminal and is thought to be capable of providing 211 MW at an efficiency of 60%. The components and the circulation scheme of the proposed gas turbine are considered, and characteristics of existing gas turbines, LNG terminals, LNG evaporation, and cost estimates are explained. M. L.

A78-50254 Pyrolysis Flameless competition - Gasification of trash for the recovery of material (Pyrolyse Konkurrenz ohne Flamme - Die Vergasung von Abfällen zur Gewinnung von Energie). F. Nowak *Energie*, vol 30, July 1978, p 243-247. In German.

Pyrolytic procedures for obtaining energy from garbage are discussed. The procedures might be able to provide a higher energy yield more economically than is obtained from the burning of garbage. Attention is directed to the Kiener system which utilizes a low-temperature procedure for gasification of the organic material from garbage. The pyrolysis of household garbage by the Kiener system is considered with attention to the material balance and energy balance of the process. M. L.

A78-50300 Back-reflection effect on the long-wavelength spectral response of solar cells. L. A. Hussain (Ibadan, University, Ibadan, Nigeria) *Journal of Physics D - Applied Physics*, vol 11, Aug 1, 1978, p 1535-1537.

In the present paper, the effect of back reflection on the long-wave spectral response of solar cells is calculated on the basis of a simple n-on-p solar cell model. The effect is found to depend primarily on the cell thickness and to be sufficiently strong to justify consideration in solar cell design and manufacture and in the analysis of spectral response data. V. P.

A78-50401 Solar cell materials and their basic parameters. E. Bucher (Konstanz, Universität, Konstanz, West Germany). *Applied Physics*, vol 17, Sept 1978, p 1-26. 286 refs. Bundesministerium für Forschung und Technologie Contract No. ET-4007-A, Deutsche Forschungsgemeinschaft Contract No. BU-362/1.

An extensive survey of solar cell materials and their basic parameters is presented. Various types of cells (homojunctions with elements, heterojunctions with elements, MIS and Schottky diodes with elements) are classified according to cell structure, crystalline state, gaps, open-circuit voltage, illumination condition, and the constitution and thickness of antireflect layers. Developments in the silicon area, III-V compounds, II-VI compounds, binary compounds, chalcopyrites II-IV-V₂ and I-III-VI₂, and organic semiconductors are discussed. An extensive bibliography is included. S. C. S.

A78-50423 Fossil fuel - Future shock. J. Gribbin (Sussex, University, Brighton, England) *New Scientist*, vol 79, Aug 24, 1978, p 541-543.

The effect of an increased amount of atmospheric CO₂ on the climate is discussed. The role of natural reservoirs of CO₂ is examined with attention to the question of whether the reservoirs still retain unlimited capacity or are nearing the end of their capacity. It is suggested that the oceans, which now contain more than ten times as much carbon as the biomass and atmosphere together, might serve for longterm and massive storage of CO₂. The 'quality of life' likely to result if CO₂-induced temperature increases and changes in water/rain patterns occur is weighed, and it is suggested that the changes should not a priori be judged undesirable. Limitation of model predictions and possible model accuracies are considered. M. L.

A78-50425 Sweden strides towards a solar society. G. Taylor *New Scientist*, vol 79, Aug 24, 1978, p 550-552.

The Swedish program for developing solar energy sources is described and contrasted with the British approach to energy research. The Swedish program envisions a 37% larger supply of energy in 2015 than was available in 1975, about 12% of the increased energy would come from direct solar heating, 62% would come from biomass-yielding solid, liquid, and gaseous fuels, and approximately 26% would come from solar-generated electricity, including hydroelectricity. It is suggested that, in contrast with the British approach, the Swedes have placed more emphasis on simply applied conservation practices, are less interested in expensive research programs, and have funded a more diverse group of researchers. The program for developing residential passive solar heating in Sweden is described. M. L.

A78-50568 # Combustor performance of high availability fuels. C. A. Moses and D. W. Naegeli (US Army, Fuels and Lubricants Research Laboratory, San Antonio, Tex.) *Combustion Institute, Spring Technical Meeting, West Lafayette, Ind., Apr 3, 4, 1978, Paper 10 p*.

In connection with shortages which might occur with respect to currently used jet fuels, investigations have been conducted regarding the feasibility to employ other fuels, which are available in adequate quantities. The reported study is concerned with the effect which the substitution of such fuels will have on combustor performance. A 2-inch diameter cylindrical research combustor designed for high temperatures and pressures was used in the study. It was found, however, very difficult to draw significant conclusions about the effects of fuel properties on combustion efficiency. This difficulty was related to the geometry of the combustor which was such that if the flame could be stabilized in the primary zone, combustion was very efficient. Even the two fuels with the highest end points and viscosities were not significantly different. G. R.

A78-50569 # Variability of emissions measurements on a small gas turbine engine. G. Opdyke, Jr. (Avco Corp., Avco Lycoming Stratford Div., Stratford, Conn.) *Combustion Institute, Spring Technical Meeting, West Lafayette, Ind., Apr 3, 4, 1978, Paper 15 p*.

A turboprop engine, rated at 620 equivalent shaft horsepower at takeoff, configured with a shaft engine gearbox for test convenience, was tested twenty times in a one-month period for measurement of emission levels. Ten different fuel manifold and injector assemblies were tested. The obtained results show that changing fuel injectors will have an impact on emission levels. The variability which results is larger than that caused by injector design differences or by the differences in the physical characteristics between Jet A and DF-2 fuels. The fuel injector effect could not be explained by the variation of fuel flow between individual injectors. It is concluded that the fuel spray droplet spatial distribution, probably unique to each single injector, is such that hydrocarbon emissions are significantly affected by fuel droplet or vapor impingement in the wall cooling film, and CO emissions vary because of reaction quenching in the mainstream and in the cooling film. G R

A78-50571 # Alternative fuel effects upon combustion efficiency in continuous combustors D A Schmidt and A M Mellor (Purdue University, West Lafayette, Ind.) *Combustion Institute, Spring Technical Meeting, West Lafayette, Ind., Apr 3, 4, 1978, Paper 8 p 5 refs* Army-supported research

The ability of the gas turbine engine to burn a variety of fuels is an important asset in connection with considerations which take into account the undesirability of a dependency on foreign crude oil. A gas turbine engine will, therefore, power the next generation Army main battle tank. Effects related to the use of different fuels are to be investigated. A systematic study is in this connection conducted of fuel volatility and viscosity relationships with efficiency. It is found that an increase in combustion inefficiency with heavier fuels is due to the larger droplets in the spray penetrating through the shear layer into the relatively cooler free stream air where CO and HC oxidation reactions are quenched. Results to date show that Jet A blended exhibits slightly higher combustion inefficiency than no. 2 diesel fuel. The 90% distillation point appears to be the important distillation regime relevant to combustion inefficiency. G R

A78-50587 The development of a regenerator seal for vehicular use M Kitano, H Okano (Toyota Motor Co., Ltd., Shizuoka, Japan), T Otani (Hino Motors, Ltd., Hino, Tokyo, Japan), and Y Kondo (Nippon Denso Co., Ltd., Kariya, Aichi, Japan). In Tokyo Joint Gas Turbine Congress, Tokyo, Japan, May 22-27, 1977, Proceedings Tokyo, Gas Turbine Society of Japan, 1977, p 97-103, Discussion, p 104. 5 refs

The development of a regenerator seal for the GT-21 two-shaft regenerative gas turbine engine for the Hino RL bus is described. It was very important for seal durability that the mean contact pressure of the seal against the core should be small and that local contact pressure should not be excessive. Candidate materials were surveyed and graphite was found to be the most suitable for a cold side seal and for the peripheral part of the hot side seal. A modified seal, whose peripheral part was made of graphite and a thin metal plate, showed good performance and seemed to have good durability. B J

A78-50588 Aluminous keatrite - A durable ceramic material for rotary regenerator cores D G Grossman and J G Lanning (Corning Glass Works, Corning, N.Y.) In Tokyo Joint Gas Turbine Congress, Tokyo, Japan, May 22-27, 1977, Proceedings Tokyo, Gas Turbine Society of Japan, 1977, p 105-110 7 refs

Operating characteristics of rotary ceramic regenerator cores in small gas turbines are discussed. Included in the discussion are material, configurations and structural considerations. Core performance in several different engine designs is described. (Author)

A78-50592 A study on a premixed combustor for a vehicular gas turbine T Morishita (Toyota Motor Co., Ltd., Susono, Shizuoka, Japan), K Nakamura (Toyota Motor Co., Ltd., Toyota, Aichi, Japan), and Y Tanasawa (Toyota Central Research and Development Laboratories, Inc., Nagoya, Japan). In Tokyo Joint

Gas Turbine Congress, Tokyo, Japan, May 22-27, 1977, Proceedings Tokyo, Gas Turbine Society of Japan, 1977, p 137-141, Discussion, p 142 6 refs

A study on premixed combustion and its characteristics are presented. Its marginal air temperature and pressure at its flash back limits are quite high up to 700 C and 5 ata which are the conditions required to the premixed combustor as a component of a regenerative gas turbine engine with low pressure ratio. And also, combustion characteristics of a premixed annular combustor developed on this concept of the premixed combustion are presented as well. (Author)

A78-50601 Development of the experimental gas turbine bus S Yamazaki and T Itoh (Nissan Motor Co., Ltd., Central Engineering Laboratories, Yokosuka, Japan). In Tokyo Joint Gas Turbine Congress, Tokyo, Japan, May 22-27, 1977, Proceedings Tokyo, Gas Turbine Society of Japan, 1977, p 223-229, Discussion, p 230

Nissan Motor Company has designed and built the experimental gas turbine buses to evaluate the performance of vehicles equipped with gas turbines. The purposes of developing a gas turbine bus are to purify exhaust gas emissions, eliminate smoke and odor, reduce driving noise, and ultimately to manufacture a bus that permits greater riding comfort, with less pollution and less vibration. This paper describes the construction, performance, noise reduction and emission control of the Nissan Gas Turbine Bus. (Author)

A78-50602 Advantages of 3-shaft KTT gas turbine configurations for automotive applications S O Kronogard (United Turbine AB and Co., Malmo, Sweden). In Tokyo Joint Gas Turbine Congress, Tokyo, Japan, May 22-27, 1977, Proceedings Tokyo, Gas Turbine Society of Japan, 1977, p 231-238, Discussion, p 238-240 6 refs

This paper gives a brief description of an experimental version of the KTT turbine system, its components and their relative arrangement as well as some of the basic thinking behind this new concept. The paper also gives a short description of the possibilities with this system to introduce ceramics at an early stage. It also describes a new way of obtaining fast acceleration, low idling speed and low part load fuel consumption. (Author)

A78-50603 A development of advanced radial gas turbine for automobile S Sasaki, K Takizawa (Toyota Motor Co., Ltd., Susono, Shizuoka, Japan), and N Mizumachi (Tokyo, University, Tokyo, Japan). In Tokyo Joint Gas Turbine Congress, Tokyo, Japan, May 22-27, 1977, Proceedings Tokyo, Gas Turbine Society of Japan, 1977, p 241-247, Discussion, p 247, 248 5 refs

A performance estimation of a radial inflow turbine based commonly on the assumption in which the flow at rotor-exit was one-dimensional having no rotor-exit swirl. Through the investigation of the test results obtained from the turbine designed with this design procedure, it was found to be expectable to have some improvements by having an alternative design approach. The new design procedure would be described as follows. The flow at rotor-exit was analyzed two-dimensionally in which the loss distribution from the rotor hub to tip was assumed to be a function of rotor-exit radius. The optimum rotor-exit swirl corresponding to the maximum efficiency was obtained by estimating performances for various intensities of swirl. The efficiency of the turbine designed with the improved design procedure indicated the improvement by about 7 percent compared to the case of the turbine designed by using the conventional procedure. (Author)

A78-50604 Energy economy with high temperature gas-turbine H G Munzberg (Munich, Technische Universität, Munich, West Germany). In Tokyo Joint Gas Turbine Congress, Tokyo, Japan, May 22-27, 1977, Proceedings Tokyo, Gas Turbine Society of Japan, 1977, p 249-258, Discussion, p 259 5 refs

Techniques for cooling high-temperature gas turbines are considered, and a comparison of air cooling and liquid-metal cooling of gas turbines with hollow blades shows the superior advantages of the

latter technique. An optimization study for the liquid-metal cooling is reported, and the utilization of the liquid-metal heat and of the exhaust heat is considered. Gas turbines with good fuel consumption characteristics are compared with gas turbines with optimized construction features. M L

A78-50612 A research on centrifugal compressor for small gas turbine - The effect of recirculating flow S Higuchi (Toyota Motor Co., Ltd., Susono, Shizuoka, Japan) and K Nakamura (Toyota Motor Co., Ltd., Toyota, Aichi, Japan) In Tokyo Joint Gas Turbine Congress, Tokyo, Japan, May 22-27, 1977, Proceedings Tokyo, Gas Turbine Society of Japan, 1977, p 337-342, Discussion, p 342, 343

The recirculating flow in centrifugal compressor was investigated on its effects to the performance through both the empirical and theoretical studies. The effects on compressor performance were investigated here by considering it for impeller and diffuser separately. This study indicated that the compressor stage characteristics were continuously deteriorated as the recirculating flow rate increased, which would adversely affect on the performance of a gas turbine engine especially when the engine size is small. Since the recirculating flow effects tend to increase as mass flow rate reduces. This study also indicated that the effects were predictable by considering both the pressure drop at diffuser inlet and the resulting mismatching of diffuser inlet angle due to the recirculating flow. It was suggested that the degree of the deterioration due to the recirculating flow would be minimized by guiding the recirculating flow towards radial direction at rotor tip. (Author)

A78-50632 Development of ceramic components for an automotive gas turbine P Walzer (Volkswagenwerk AG, Wolfsburg, West Germany) and S Forster (Kernforschungsanlage Julich GmbH, Julich, West Germany) In Tokyo Joint Gas Turbine Congress, Tokyo, Japan, May 22-27, 1977, Proceedings Tokyo, Gas Turbine Society of Japan, 1977, p 550-557, Discussion, p 557, 558 14 refs. Research sponsored by the Bundesministerium fur Forschung und Technologie

The article surveys the development of components made from high-temperature ceramics for applications in automotive gas turbines. Requirements for ceramic turbine components are identified for both steady-state and unsteady operation. Various high-temperature ceramics are described including Si₃N₄ (hot pressed, reaction sintered), SiC (hot pressed, reaction bonded, Si-infiltrated), and glass ceramics. Current research on the development of ceramic combustion chambers, turbine rotors, and rotors with metallic hubs and ceramic blades is reviewed. S C S

A78-50850 Alternative fuel methanol - Selection criteria and status of research (Alternativkraftstoff Methanol - Auswahlkriterien und Stand der Forschung). A Konig, H Menrad, W Lee, and W Bernhardt (Volkswagenwerk AG, Wolfsburg, West Germany) *Erdol und Kohle Erdgas Petrochemie vereinigt mit Brennstoff-Chemie*, vol. 31, Aug 1978, p 360-367 17 refs. In German. Research supported by the Bundesministerium fur Forschung und Technologie

A description is presented of the results of an investigation in which the possibilities and problems with respect to a use of methanol as alternative fuel for motor vehicles have been studied. It is pointed out that of all available fuel alternatives methanol appears to be most suited for a possible replacement of currently used fuels. Prototypes of vehicles for the use of methanol in undiluted form are being developed and optimized. The use of a 15% methanol-gasoline mixture as an intermediate step with respect to the introduction of methanol was investigated in a fleet test. Economic factors are of primary importance concerning the time of an introduction of methanol as fuel. On the basis of long-term considerations, a comparison of the costs involved in producing methanol and conventional fuels from coal appears vital. Such a comparison is in favor of methanol. G R

A78-50900 Photo-voltaic properties of metal-oxide-CdS solar cells. K P Pande (Rensselaer Polytechnic Institute, Troy, N.Y.) and B Singh (National Physical Laboratory of India, New Delhi, India) *Institution of Electronics and Telecommunication Engineers, Journal*, vol. 24, June 1978, p 253-256 12 refs

MIS solar cells based on metal-oxide-CdS structures have been fabricated and their photovoltaic properties have been evaluated. For a typical cell, maximum open-circuit voltage and short-circuit current have been obtained as 0.55 V and about 1 mA/sq cm at an illumination intensity of 120 mW/sq cm. Dark current in the cells has been found to be mainly dominated by tunnelling via interface states. A high density of states seems to exist in the interface between oxide and CdS which is estimated as approximately 10 to the 12th power/sq cm/eV. (Author)

A78-51062 Solar cells - Plugging into the sun J C C Fan (MIT, Lexington, Mass.) *Technology Review*, vol. 80, Aug-Sept 1978, p 14, 15, 20, 22-36 60 refs. Research supported by the U S Department of Energy and U S Air Force

An elementary discussion of the principles of solar cells is given. Factors affecting solar cell efficiency are discussed. The concept of splitting the solar spectrum into different ranges for which different cells operate most efficiently is described. The tandem cell system and filter-reflector system for achieving the splitting are illustrated. The principle types of cell structures are described, and the needed cost reductions in materials and technologies for silicon solar cells to meet D O E. goals are discussed. P T H

A78-51063 Used oil - Collection, recycling and disposal W A Irwin (U S Department of the Interior, Washington, D C) *Technology Review*, vol. 80, Aug-Sept 1978, p 54-61

Some of the basic processes by which used oil is re-refined are briefly reviewed, and the status of the laws and statutes of the U S federal government and state governments touching on the question of oil reuse and/or safe disposal of used oil are examined. It is pointed out that the government through tax rulings and consumer protection regulations has placed the used oil recycling industry at a competitive disadvantage with the virgin oil industry. The D O E's involvement with used oil recycling efforts is outlined. A model bill requires a government agency to issue rules which prescribe means for the provision of safe and conveniently located collection facilities for used oil. Recyclers or disposers would be licensed and would be required to submit reports to the agency. A summary of oil recycling policies in several European countries is given. P T H

A78-51064 Can we save energy by taxing it J F Boshier *Technology Review*, vol. 80, Aug-Sept 1978, p 62-66, 70, 71

The present paper discusses the political and economic issues raised by the two principal components of the current National Energy Plan - investment tax credit and taxes on energy sources. It is argued that taxation to increase the price of energy will enable the economic and social effects of higher energy prices to be monitored and managed. Taxes can be used to stimulate necessary new technologies. On the other hand, the conservation tax credit is working against a long-term U S policy of taxation which encourages investment in energy-intensive equipment to substitute for labor. P T H

A78-51066 Use of carbon dioxide in energy storage R Williams, R S Crandall, and A Bloom (RCA Laboratories, Princeton, N.J.) *Applied Physics Letters*, vol. 33, Sept 1, 1978, p 381-383 14 refs

A method for hydrogen storage is described which involves electrochemical reduction of CO₂ in water to produce organic compounds. The relevant reaction sequence for electrochemical reduction of CO₂ to formic acid is outlined. It is noted that the formic acid so produced is easily stored as a stable product and can be either converted to hydrogen by means of a catalyst or used directly as a fuel. The energy storage density achieved by this method is shown to be high. Experiments are discussed which

indicate that hydrogen could be produced at pressures of the order of 1000 atm by catalytic conversion of formic acid to hydrogen and CO₂ and that the energy efficiency for the proposed process can be as high as 60% F G M

A78-51067 * **A cesium plasma TELEC device for conversion of laser radiation to electric power** E J Britt, N S Rasor (Rasor Associates, Inc., Sunnyvale, Calif.), G Lee, and K W Billman (NASA, Ames Research Center, Moffett Field, Calif.) *Applied Physics Letters*, vol 33, Sept 1, 1978, p 384-386 11 refs Contract No NAS2-9109

Tests of the thermoelectronic laser energy converter (TELEC) concept are reported. This device has been devised as a means to convert high-average-power laser radiation into electrical energy, a crucial element in any space laser power transmission scheme using the available high-power/efficiency infrared lasers. Theoretical calculations, based upon inverse bremsstrahlung absorption in a cesium plasma, indicate internal conversion efficiency up to 50% with an overall system efficiency of 42%. The experiments reported were made with a test cell designed to confirm the theoretical model rather than demonstrate efficiency. 10.6-micron laser-beam absorption was limited to about 0.001 of the incident beam by the short absorption region. Nevertheless, confirmatory results were obtained, and the conversion of absorbed radiation to electric power is estimated to be near 10% (Author)

A78-51068 * **A Schottky-barrier solar cell on sliced polycrystalline GaAs** Y C M Yeh and R J Stirn (California Institute of Technology, Jet Propulsion Laboratory, Pasadena, Calif.) *Applied Physics Letters*, vol 33, Sept 1, 1978, p 401-403 6 refs

Antireflecting-metal-oxide-semiconductor (AMOS) technology has been applied to sliced wafers of polycrystalline GaAs having grain sizes of about 100 microns. Simulated AM1 sunlight efficiencies up to 14% were obtained, and studies using the scanning electron microscope showed that grain boundaries have a minimal effect on short-circuit current density. However, current-voltage characteristics show some influence on open-circuit voltage (Author)

A78-51070 **Open-circuit voltage of vertical-junction photovoltaic devices at high intensity** T W Ekstedt, J E Mahan, R I Frank, and R Kaplow (MIT, Cambridge, Mass.) *Applied Physics Letters*, vol 33, Sept 1, 1978, p 422, 423 9 refs. Research supported by the National Patent Development Corp.

Vertical single-junction silicon photovoltaic cells show a steady increase in open-circuit voltage with increasing incident light intensity of approximately 0.1 V per decade of intensity, up to approximately 100 W/sq cm (about 1000 suns). Voltages as high as 0.76 V have been observed at 25 C with no apparent saturation of voltage at high intensity. Measurements are presented for cells of various base doping levels. An efficiency of 19.1% has been observed at 76 W/sq cm and 25 C using an unfiltered xenon short-arc lamp for a nonoptimized cell (Author)

A78-51220 **A technical, economic and environmental assessment of utilizing solar energy for heating/cooling and energy conversion** R Romancheck (Research and Technical Services, Allentown, Pa.) *Energy Communications*, vol 4, no 5, 1978, p 433-439

The desirability of employing solar energy for heating is examined with attention to the availability of sunshine in different regions of the U.S. A solar collection cost breakdown is presented, and it is concluded that government subsidy will be required if collector panels are to be sold cheaply. Electrical energy conversion and solar cooling are not thought to be economically feasible for extensive use. Procedures for increasing the cost effectiveness of solar equipment are surveyed M L

A78-51221 **Implications of utilizing synthetic fuels in combined cycles** D J Ahner (General Electric Co., Schenectady, N Y.) *Energy Communications*, vol 4, no 5, 1978, p 441-468

Ash-forming trace contaminants, chemical properties, and physical properties of synthetic fuels derived from coal are discussed with reference to the design of gas turbines and related equipment. It is noted that most turbines have been designed for use with fuel oil, and a change in fuel characteristics would probably require modification of materials selection, thermodynamic cycle, and operating conditions as well as design conversion. Combined cycle performance and synthetic fuel requirements are summarized, and the effects of synthetic fuel combustion on air pollution are considered M L

A78-51243 **Electronic characterization of indium tin oxide/silicon photodiodes** N S Chang and J R Sites (Colorado State University, Fort Collins, Colo.) *Journal of Applied Physics*, vol 49, Sept 1978, p 4833-4837 18 refs Contract No E(04-3)-1203

The electronic characteristics of photodiodes of indium tin oxide deposited on single-crystal p-silicon are reported. Where possible, comparisons are made with measurements of a standard NASA p-n-junction solar cell. Dark measurements include the current and capacitance dependences on voltage and temperature. Photo-current measurements show the relationships between illumination intensity, temperature, and wavelength of light. It is concluded that the ITO/Si structure forms a good Schottky-barrier structure with a large built-in voltage (over 1.0 eV at low temperatures). S C S

A78-51271 **Linear machine power requirements and system comparisons** E Abel, J L Mahtani, and R G Rhodes (Warwick University, Coventry, England) (*International Magnetism Conference, Florence, Italy, May 9-12, 1978*) *IEEE Transactions on Magnetics*, vol MAG-14, Sept 1978, p 918-920 7 refs

A study is conducted of the German magnetic levitation (Maglev) revenue vehicles. The study evaluates and compares total substation power required by the Germany revenue vehicle designs. The evidence suggests that the linear induction motor does not appear to be a good choice for a propulsion subsystem at 500 km/h or indeed at 400 km/h. The long stator motor does not perform well either when loaded at 400 km/h or run at 500 km/h. The electrodynamic-linear synchronous motor system, on the other hand, appears to show definite promise for the envisaged operating speed range from 400 to 500 km/h G R

A78-51316 # **The use of liquid dielectrics for the cooling of photoelectric converters (Ispol'zovanie zhidkikh dielektrikov dlia okhlazhdeniia fotopreobrazovatelei)** B A Bazarov, V D Tereshin, and A Pendzhiev (Akademiya Nauk Turkmensoi SSR, Fiziko-Tekhnicheskii Institut, Ashkhabad, Turkmen SSR) *Akademiya Nauk Turkmensoi SSR, Izvestiia, Seriya Fiziko-Tekhnicheskikh, Khimicheskikh i Geologicheskikh Nauk*, no. 3, 1978, p 119-121. In Russian

The efficiency of several liquid coolants when applied to silicon solar cells was studied. The spectral sensitivity of the solar cells was determined for the following coolants: Freon-113, ethyl ether, and distilled water. It is found that Freon-113 is the best of the three, because of its spectral properties, chemical inertness with respect to the converter material, and nonflammability B J

A78-51321 **Neutron and X-ray diffraction investigation of deuterium storage in La₇Ni₃** P Fischer, W Halg (Eidgenossische Technische Hochschule, Würenlingen, Switzerland), L Schlapbach (Eidgenossische Technische Hochschule, Zurich, Switzerland), and K Yvon (Geneve, Universite, Geneva, Switzerland) *Journal of the Less Common Metals*, vol 60, July 1978, p 1-9 18 refs. Research supported by the Swiss National Science Foundation

According to quantitative phase analysis by neutron powder diffractometry, deuteration of La₇Ni₃ at room temperature leads to

the irreversible decomposition of the La_7Ni_3 into La_2O_3 and LaNi_5 . The D atoms are found to be distributed over the tetrahedral and octahedral interstices of the fcc metal atom arrangement, the D atoms occupying the octahedral interstices are not exactly at the center but appear to be shifted away from it along different directions. A reason for this delocalization is proposed. The determined structure of La_7Ni_3 is discussed with reference to other Th_7Fe_3 -type structures. M L

A78-51342 * Hydrogen from the solar photolysis of water. P R Ryason (California Institute of Technology, Jet Propulsion Laboratory, Pasadena, Calif.) *Energy Sources*, vol 4, no 1, 1978, p 1-22. 56 refs. Contract No. NAS-7-100.

Developments related to the study of photosynthesis are examined and aspects of photosensitization by solids are considered. It is pointed out that solids photosensitization for solar photochemical fuel formation is now an extremely active research area as a consequence of the promising results obtained with semiconductor photoelectrodes. The investigation of water decomposition schemes involving heterogeneous reactions is likely to be a productive area. As is the case for photosynthesis, the known examples of water decomposition by solids photosensitization involve charge separation processes immediately following light absorption. Homogeneous photoredox reactions are also discussed, taking into account thermochemical and photochemical cycles leading to the formation of a photooxidized ion, hydrogen quantum yields in the photo-oxidation aqueous ions, and thermochemical and photochemical cycles leading to the formation of a photoreduced ion. G.R.

A78-51343 Carbonate rock - A resource for energy. K. E. Haque (Department of Energy, Mines and Resources, Mineral Sciences Laboratories, Ottawa, Canada) *Energy Sources*, vol 4, no 1, 1978, p 77-84. 11 refs.

Carbonate rock is considered one of the major sources of carbon dioxide, capable of catalytic conversion to methane, synthetic natural gas (SNG), and other organic products. A brief account of various research reports available in the literature on the catalytic hydrogenation of carbon dioxide is included. Finally, carbon dioxide or, more specifically, carbonate rock is advanced as a potential source of products that might serve either as feedstocks for petrochemical industries or for production of energy. (Author)

A78-51396 # Optimization of the operation of a solar energy converter (Optimizatsiya rezhima preobrazovaniya solnechnoi energii). In V Mitishkin *Avtomatika i Telemekhanika*, July 1978, p. 53-60. 8 refs. In Russian.

Consideration is given to the automatic optimization of the operation of a solar energy converter (solar array, solar thermoelectric generator, etc.) in autonomous power-supply systems. The process of search for maximum power extracted from the converter by means of a pulsed automatic optimizer is investigated. A dc-converter with parallel switch is used in the power circuit of the optimizer. B J

A78-51398 # Algorithm and block diagram for controlling the modes of operation of a hydroelectric plant with energy storage in a large energy complex (Algoritmi i blok-skhem upravleniya rezhimami raboty GAES v energoob'edinenii). L A Karol', B I Silaev, and V M Rabinkii (Moskovskii Energeticheskii Institut, Moscow, USSR) *Energetika*, vol 21, June 1978, p 97-101. In Russian.

The paper presents the block diagram of an algorithm for optimizing the diurnal operations of a hydroelectric power plant with energy storage. This algorithm is part of the software of an automatic system of dispatcher control of the short-term operations of a power plant in a large energy complex. Some computational results are presented for the particular example of the Kiev hydroelectric plant, and recommendations relating to improvement of the algorithms are given. B J.

A78-51490 Solar power satellite developments. P E Glaser (Arthur D Little, Inc., Cambridge, Mass.) (*American Astronautical Society and Deutsche Gesellschaft für Luft- und Raumfahrt, Goddard Memorial Symposium, 16th, Washington, D C, Mar 8-10, 1978*) *Journal of the Astronautical Sciences*, vol 26, Apr-June 1978, p 101-127. 26 refs.

The terrestrial solar energy conversion methods capable of generating power continuously are reviewed and the rationale for solar energy conversion in geosynchronous orbit is outlined. The principles of the concept of solar power satellites (SPS) are presented and the technology options for converting solar energy in space, transmitting microwave power, and converting it on earth into electricity, are summarized. The development of the design concept of the SPS, based on solar thermal and photovoltaic conversion, is examined and salient characteristics are provided. The details of microwave power generation, beam transmission, and conversion to DC at the receiving antenna on earth are discussed. The requirements for a space transportation system, orbital construction and assembly, maintenance and operations are reviewed. The environmental impacts of SPS operation, such as stratospheric emission by space vehicles and atmospheric attenuation and scattering, ionospheric interactions, and biological effects of the microwave beam are highlighted. Economic and social issues are considered and the potential contribution of the SPS to meet future energy demands is projected. (Author)

A78-51501 An analysis on solar concentrators with a curvature determined by gravity and a mobile focal axis. G A Rottigni (Genova, Università, Genoa, Italy) *Nuovo Cimento C, Serie 1*, vol 1 C, May-June 1978, p 197-206. 5 refs.

The use of gravity to obtain a desired deformation of the surface of cylindrically symmetric solar concentrators is considered. Characteristics of east-west and north-south concentrators with gravity-determined curvatures are calculated and compared. The calculations suggest that the energy collected during the half-year March 21-September 21 by the 100-cm-diameter collector with the east-west axis is on the average about 25 percent more than that collected by the north-south collector, as a result of the greater operating interval for the east-west collector. M L

A78-51528 # Recent advances in solid state microwave devices. G Gibbons (Plessey Co., Ltd., Allen Clark Research Centre, Towcester, Northants, England). In European Microwave Conference, 7th, Copenhagen, Denmark, September 5-8, 1977, Proceedings. Sevenoaks, Kent, England, Microwave Exhibitions and Publishers, Ltd., 1978, p 71-82. 32 refs.

The current status of microwave solid-state devices is outlined with reference to GaAs FETs, InP TEDs, and Si TRAPATTs. Values are given for the carrier density profile of a GaAs FET layer as well as the noise figure versus the frequency, and added power versus frequency. It is noted that GaAs FET noise figures under 1.5 dB have been achieved in X-band. Studies of cathode contact and the fabrication of two-zone cathode structures have resulted in improved efficiency in transferred electron oscillators. Avalanche diodes are considered and it is shown that 30-35% efficiencies have been achieved in X-band using CW GaAs Read diodes and pulsed Si TRAPATTs. SCS

A78-51602 # Helium in soil gases of the Roosevelt Hot Springs Known Geothermal Resource Area, Beaver County, Utah. M E Hinkle, E H Denton, R C Bigelow, and R L Turner *Journal of Research*, vol 6, Sept-Oct 1978, p 563-569. 11 refs.

A78-51603 # CS₂ and COS in soil gases of the Roosevelt Hot Springs Known Geothermal Resource Area, Beaver County, Utah. M E Hinkle and T F Harms, *Journal of Research*, vol 6, Sept-Oct 1978, p 571-577. 7 refs.

A78-51621 # Turboexpanders for energy conservation J Holm and J S Swearingen (Rotoflow Corp., Los Angeles, Calif) *Mechanical Engineering*, vol 100, Sept 1978, p 34-40 13 refs

It is pointed out that significant amounts of energy are wasted in industrial and gas processing facilities where pressurized gas is reduced by throttling. Approaches for conserving energy are discussed, taking into account the various types of turbines and the design qualifications needed to meet energy conservation requirements. Attention is given to expander applications, efficiency considerations with respect to turbine design, the direct connected compressor, and arrangement consisting of a high-speed turboexpander and a generator, turboexpander qualities, variable flow control, the expansion of condensing streams, journal bearings, thrust bearing force meters, shaft seals, and the available sizes of turboexpanders. G R

A78-51674 Secondary batteries Recent advances R W Graham. Park Ridge, N.J., Noyes Data Corp. (Chemical Technology Review, No 106, Energy Technology Review, No 26), 1978 413 p \$42

Information drawn from U.S. patents issued since July 1975 is incorporated in this discussion of secondary batteries and their commercial technology. Topics include lead acid batteries, zinc electrodes and batteries, nickel-cadmium and other alkaline batteries, sodium-sulfur solid electrolyte batteries, lithium batteries, and other battery systems. Besides providing technical information, the book serves as a guide to U.S. patent literature, and a company index, an inventor index, and a U.S. patent number index are supplied. M L

A78-51713 # Corrosion behavior of type 310 stainless steel in coal-gasification environments O K Chopra and K Natesan (Argonne National Laboratory, Argonne, Ill.) In *Environmental degradation of engineering materials*, Proceedings of the Conference, Blacksburg, Va., October 10-12, 1977. Blacksburg, Va., Virginia Polytechnic Institute and State University, 1978, p 247-256 6 refs ERDA-supported research

A78-51776 Energy and resource recovery from industrial and municipal solid wastes Edited by G F Kroneberger (Envirotech Corp., Belmont and Menlo Park, Calif.) *AIChE Symposium Series*, vol 73, no 162, 1977 231 p \$20

A city view on solid waste management is considered along with a review of advanced solid-waste processing technology, a review of resource recovery technology, the operating experience of the Ames solid waste recovery plant, the effective separation of shredded municipal solid waste by elutriation, and the character and dewatering properties of sludges from water treatment. Attention is also given to processing of industrial waste for solar evaporation, metal and glass recovery from municipal solid waste, the chemistry of recycling aluminum, the outlook for recycling ferrous scrap from solid waste, pyrolysis and assessment of pyrolysis systems, operational experiences with the CPU 400 pilot plant, direct and indirect energy recovery via pyrolysis in multiple hearth furnaces, and the combined processing of wastewater and solid waste. G R

A78-51777 Review of advanced solid-waste processing technology D G Wilson (MIT, Cambridge, Mass.) *AIChE Symposium Series*, vol 73, no 162, 1977, p 16-30 62 refs NSF Grant No. GI-392278

Size reduction has become an accepted method of solid-waste processing. When applied to solid-waste processing, size reduction implies that large pieces of solid waste are torn, sheared, cut, or fractured, to produce smaller pieces. Baling by high pressure compaction is a viable process which can reduce the long-haul transportation costs of solid wastes and improve the properties of landfills. However, there is presently no known commercial baling operation which is profitable. Attention is also given to conventional incineration, fluidized-bed incineration, air-pollution control equipment, incineration with heat recovery, solid waste as supplementary fuel,

the conversion of solid wastes into a storable transportable fuel, separation processes, and composting. G R

A78-51778 A review of resource recovery technology B Morey and A Gupta (Occidental Research Corp., La Verne, Calif.) *AIChE Symposium Series*, vol 73, no 162, 1977, p 31-51 38 refs

The interface of separation technology on resource recovery is reviewed. The review briefly describes processes for making useful products from the organics. Since the specifications determine the quality of separation that must be achieved, a description of the markets is included. After a discussion of markets and the more widely explored processing techniques, two largely different systems are described that represent the range of resource recovery technology today. Attention is given to aspects of energy recovery, steam recovery, gas systems, gas from biological conversion, magnetic metals recovery, and wet processing. G R

A78-51779 Operating experience of the Ames Solid Waste Recovery Plant H D Funk and S H Russell (Henningson, Durham and Richardson, Inc., Omaha, Neb.) *AIChE Symposium Series*, vol 73, no 162, 1977, p 52-58

The Ames Solid Waste Recovery System consists of three major components, including the processing plant, the refuse derived fuel storage and retrieval system, and the power plant. In a discussion of the operation of the system, attention is given to aspects of materials flow, the ferrous metal fraction, the glass/grit fraction, wood chips, aluminum and nonferrous metals, the rejects fraction, the refuse fuel, questions of energy usage, operation under emergency conditions, and system costs. G R

A78-51780 Effective separation of shredded municipal solid waste by elutriation R M Hill (Triple/S Dynamics, Inc., Dallas, Tex.) *AIChE Symposium Series*, vol 73, no 162, 1977, p 59-61

Elutriation is defined as a washing action to purify, separate, or remove. The equipment used for elutriation is named 'VibroLutriator' to emphasize the true nature of an elutriation (or air washing) process using both mechanical vibration and air as contrasted with primitive air blast separators described by the familiar term 'aspiration'. The VibroLutriator differs from the ordinary aspirator in two very important respects. Material is moved through the treatment zones by vibration on a horizontal, or slightly inclined surface, and elutriation takes place in a deep and slow-moving, but turbulent, bed of material which is fluidized by all or part of the same air that entrains and conveys the light fraction out of the separating zone. G R

A78-51785 Pyrolysis and assessment of pyrolysis systems R C Bailie and D M Doner (West Virginia University, Morgantown, W Va.) *AIChE Symposium Series*, vol 73, no 162, 1977, p 102-119 41 refs

For clarification 'pyrolysis' has been defined as the term used for an irreversible chemical change brought about by the action of heat in an atmosphere devoid of oxygen. On the basis of this definition, it is found that of the various 'pyrolysis' systems considered only few involve pure pyrolysis. A review of waste pyrolysis systems is provided, taking into account four systems which are now on the verge of commercialization. It is pointed out that the pyrolysis of many materials including solid waste provides alternatives to incineration and can produce valuable products that can be piped or trucked considerable distances and used as a fuel or chemical raw material. G R

A78-51786 Operational experiences with the CPU-400 pilot plant R H VanderMolen and G L Wade (Combustion Power Co., Inc., Menlo Park, Calif.) *AIChE Symposium Series*, vol 73, no 162, 1977, p 120-132

A solid fueled gas turbine pilot plant has been constructed and operated by the Combustion Power Company in Menlo Park, California. This plant has proven the reality of combusting solid fuels

such as high sulfur coal, industrial wood waste, and municipal refuse, in a pollution-free manner, in a gas turbine cycle. The plant is described and operating data are discussed. The plant status and major problem areas are also detailed. (Author)

A78-51787 Direct and indirect energy recovery via pyrolysis in Multiple Hearth Furnaces. G. F. Kroneberger (Envirotech Corp., Belmont and Menlo Park, Calif.) *AIChE Symposium Series*, vol 73, no 162, 1977, p 133-142.

The use of the Multiple Hearth Furnace (MHF) for pyrolysis applications is discussed. Design details of the MHF are provided and a process description is presented. Attention is given to aspects of nomenclature, thermal energy considerations, proven types of pyrolysis, the equipment used for the processing of sludge and refuse derived fuel, and observations regarding pyrolysis in general. It is pointed out that for 'high heat' feed materials the pyrolysis process is much easier to control than an incineration process. The segregation of solid wastes into re-useable resources and the recovery of the energy from the remainder, maximizes the environmental benefits of this previously troublesome 'waste'. G. R.

A78-51788 Combined processing of wastewater and solid waste. R. B. Sieger and B. D. Bracken (Brown and Caldwell, Walnut Creek, Calif.) *AIChE Symposium Series*, vol 73, no 162, 1977, p 143-149. 5 refs.

A description is given of a process involving the combustion and pyrolysis of sewer sludge and refuse-derived fuel (RDF). The process utilizes a fully automated, dry classification type, resource recovery plant to provide RDF from the combustible fraction of solid waste while recovering ferrous metals and aluminum. The RDF is pneumatically conveyed to the water reclamation plant site for storage and use as fuel in the multiple hearth sewage sludge furnaces. The heat of combustion of the furnace exhaust is recovered by waste heat boilers to produce steam. Some of the steam is used to drive steam turbines for aeration blowers, electrical generators, and various mechanical drives. The remaining steam is used to satisfy treatment plant heating and cooling loads. G. R.

A78-51789 Pyrolysis of municipal solid waste to fuels and chemicals. N. W. Snyder (Ralph M. Parsons Co., Pasadena, Calif.) *AIChE Symposium Series*, vol 73, no 162, 1977, p 150-159. 9 refs.

A description is presented of a number of systems which can dispose of sewage sludge along with refuse. Municipal solid waste collected for disposal contains approximately 75% organics, which are mostly cellulosic. Aspects of resource recovery are examined. Recovery of energy by pyrolysis is accomplished by the thermal decomposition of organic matter into gases, oil, and char in an oxygen free atmosphere. Attention is given to pyrolysis systems, the Purox system and nitrogen-free synthesis gas utilization, occidental flash pyrolysis, the Monsanto/Landgard system, the Andco-Torrex system, construction and operating costs, and thermal efficiencies. G. R.

A78-51790 Union Electric's solid waste utilization system. D. L. Klumb and P. R. Brendel (Union Electric Co., St. Louis, Mo.) *AIChE Symposium Series*, vol 73, no 162, 1977, p 160-167.

A solid waste utilization system for the St. Louis region, including the City of St. Louis, is considered. Public and private trash haulers are employed in connection with the collection and the transport of the trash. The trash will be dumped in conveyor dumping pits or on the floor at a transfer station. The solid waste will be loaded into rail car containers and be brought to the processing plants by means of special trains. Attention is given to the processing facilities, the boiler charging systems, solid waste characteristics, and bottom ash and fly ash characteristics. G. R.

A78-51791 Technology options in thermal processing of organic hazardous wastes. R. D. Ross (Read-Ferry Co., Inc., Haddonfield, N.J.) *AIChE Symposium Series*, vol 73, no 162, 1977, p 176-187.

It is assumed that the majority of wastes from process applications are hazardous in one way or another. A classification of the considered wastes involves the determination of the nature of the waste, and a determination of its degree of toxicity. There are three basic recovery possibilities in any thermal processing operation. The first is heat value, the second is related to the chemical value, and the third takes into account the fuel value. A description of the currently available systems is presented, giving attention to the fluid bed incinerator, a process for recovering carbonate salts in the wet form, and the combustion process of a chlorinated or fluorinated waste system. The present status of pyrolytic systems is also examined. G. R.

A78-51792 Recovery and use of products from petroleum treating wastes. R. E. Maple and A. R. Price (Merichem Co., Houston, Tex.) *AIChE Symposium Series*, vol 73, no 162, 1977, p 200-206.

A78-51814 Energy use and climatic changes. J. Williams and W. Hafele (International Institute for Applied Systems Analysis, Laxenburg, Austria.) (*International Astronautical Federation, International Astronautical Congress, 28th, Prague, Czechoslovakia, Sept 25-Oct 1, 1977.*) *Acta Astronautica*, vol 5, July-Aug 1978, p 589-600. 51 refs.

The potential impact of the large-scale use of solar, nuclear, and fossil-fuel (coal) energy options on global climate is discussed. The role of space observations in the evaluation of the impact of energy systems on climate is considered and shown to be significant. The impact on climate is examined for waste heat, increased atmospheric CO₂ levels, and solar energy conversion systems such as solar thermal electric conversion, ocean thermal energy conversion, photovoltaic conversion, biomass conversion, and solar satellite power systems. Results of sensitivity tests with numerical models of atmospheric circulation are noted which suggest that the release of large amounts of waste heat would cause hemispheric or global climate changes, that fossil-fuel systems would lead to an increase in atmospheric CO₂, and that solar energy conversion systems would also cause climate changes if employed on a large scale. F. G. M.

A78-51818 Projections of the price of hydrogen fuel. J. O. Bockris (South Australia, Flinders University, Adelaide, Australia.) *International Journal of Energy Research*, vol 2, Jan-Mar 1978, p 9-17. 23 refs.

The cost of hydrogen obtained by various procedures is estimated. In an expression for the cost of 1 MBTU of hydrogen by electrolysis, the cost is set equal to the sum of a constant and a constant times the product of the voltage and the cost. Cost predictions for hydrogen obtained using photovoltaic electricity, coal, chemical processes for water, new electrochemical processes, improved electrolysis of water, electrolysis at very high temperature, photoelectrochemical production, photosynthesis, and aerogeneration are discussed. The cost of electricity under relevant circumstances is examined, and the cost of hydrogen storage is considered. M. L.

A78-51819 Solar energy conversion through phase transformations. R. C. Srivastava (Birla Institute of Technology and Science, Pilani, India), A. S. N. Murthy, and G. R. Saini (Indian Institute of Technology, New Delhi, India.) *International Journal of Energy Research*, vol 2, Jan-Mar 1978, p 43-45. 12 refs.

Sodium thiosulphate pentahydrate and sodium sulphate decahydrate show appreciable potential differences and currents when the solid phase is in contact with its molten phase. The studies offer a new method for converting solar energy into electrical power. (Author)

A78-51906 Solar cells for terrestrial communications. I. (Solargeneratoren in der terrestrischen Nachrichtentechnik. I.) E. Sommer (Fachbeirat Laser-Optoelektronik, Bonn, West Germany.) *Nachrichten Elektronik*, vol 32, Apr 1978, p 115-118. In German.

The significance of solar cells for powering communication systems in remote areas will increase dramatically during the next

few years. This paper discusses the advantages and disadvantages of solar-cell power sources and compares them with other energy sources. A number of applications of solar cells in terrestrial communication systems are examined. B J

A78-51909 Solar cells for terrestrial communications II (Solargeneratoren in der terrestrischen Nachrichtentechnik II) E Sommer (Fachbeirat Laser-Optoelektronik, Bonn, West Germany) *Nachrichten Elektronik*, vol 32, May 1978, p 159, 160. In German.

The present use of solar arrays to power terrestrial communication systems is reviewed. Consideration is given to such applications as educational television, radio receivers in remote areas without power lines, and military applications. B J

A78-51926 Intraregional variations of solar radiation in the eastern United States M A Atwater and J T Ball (Center for the Environment and Man, Inc., Hartford, Conn.) *Journal of Applied Meteorology*, vol 17, Aug 1978, p 1116-1125. 16 refs. NSF Grants No. ATM-76-09581, No. AER-75-14536.

Data generated by a physically based solar radiation model consisting of hourly values of total and direct-beam solar radiation were computed at nearly 50 stations in the United States for the years 1971 and 1972. The radiation model used in the computations includes the effects of Rayleigh scattering, absorption by water vapor and permanent gases, and absorption and scattering by clouds and aerosols. Random and systematic variations of total solar radiation are presented for the eastern United States. Errors in computed radiation on a daily basis were less than distance-induced random variations for distances of no less than about 100 km. Systematic intraregional differences in monthly solar radiation of between 15% and 30% were computed within distances of 200 km in the eastern United States. The spatial distribution of total solar radiation is significantly influenced by coastal-inland and urban-rural climatic differences, with radiation minima computed for some large cities.

A78-51977 # Solar power satellite construction and maintenance-- The first large-scale use of man-in-space K H Miller and E Davis (Boeing Aerospace Co., Seattle, Wash.) *American Institute of Aeronautics and Astronautics, Conference on Large Space Platforms Future Needs and Capabilities*, Los Angeles, Calif., Sept 27-29, 1978, Paper 78-1637. 10 p.

The 10 GWe photovoltaic solar power satellite concept developed by NASA and Boeing Aerospace Company is described. Current construction and maintenance approaches are discussed. This concept requires several hundred people working in space. They will be located at a low-earth-orbit construction base, a geosynchronous earth-orbit final assembly base, or on the satellites performing maintenance. The text includes discussions of crew jobs, work schedules, rotation, transportation, productivity, and other human factors considerations.

A78-51981 * # Design concept of geostationary platform E C Hamilton and W T Carey, Jr (NASA, Marshall Space Flight Center, Huntsville, Ala.) *American Institute of Aeronautics and Astronautics, Conference on Large Space Platforms Future Needs and Capabilities*, Los Angeles, Calif., Sept 27-29, 1978, Paper 78-1642. 8 p.

The payload efficiency of communication satellites has typically averaged 25 to 30% while meteorology and earth observation

satellites range from 30 to 35%. Improvement in solar cell efficiency, batteries, electric propulsion for stationkeeping, and solid-state circuitry will increase this efficiency in the future, but it will still be advantageous in the Shuttle era to reduce the expenditure for support systems. A platform that provides all the support functions could reduce the initial cost due to economics of scale and also reduce transportation cost. Three alternate configurations of a platform for geosynchronous orbit communications and meteorology missions are presented.

A78-51982 * # Large space structures at the Marshall Space Flight Center J K Harrison and C R Darwin (NASA, Marshall Space Flight Center, Huntsville, Ala.) *American Institute of Aeronautics and Astronautics, Conference on Large Space Platforms Future Needs and Capabilities*, Los Angeles, Calif., Sept 27-29, 1978, Paper 78-1650. 18 p.

The Space Shuttle will provide a new capability for the construction in space of structures too large to be accommodated in the Shuttle bay. To understand and develop this new capability several construction methods and design approaches are being studied by MSFC and industry. This paper relates the general scope of these ongoing activities, the project aims and objectives, and a discussion of many design and equipment variables. Major design and construction variables, such as on-orbit or ground fabricated construction and type of materials to be used, are discussed relative to their status and applicability to various designs. Construction methods and options are reviewed and many of the support equipments under study or development are described.

A78-51999 * # Thermal control requirements for large space structures M Manoff (Rockwell International Corp., Downey, Calif.) *American Institute of Aeronautics and Astronautics, Conference on Large Space Platforms Future Needs and Capabilities*, Los Angeles, Calif., Sept 27-29, 1978, Paper 78-1675. 7 p. Contract No. NAS1-14116.

Performance capabilities and weight requirements of large space structure systems will be significantly influenced by thermal response characteristics. Analyses have been performed to determine temperature levels and gradients for structural configurations and elemental concepts proposed for advanced system applications ranging from relatively small, low-power communication antennas to extremely large, high-power Satellite Power Systems (SPS). Results are presented for selected platform configurations, candidate strut elements, and potential mission environments. The analyses also incorporate material and surface optical property variation. The results illustrate many of the thermal problems which may be encountered in the development of three systems.

A78-52001 * # Solar power satellites - Heat engine or solar cells H Oman and D L Gregory (Boeing Aerospace Co., Seattle, Wash.) *American Institute of Aeronautics and Astronautics, Conference on Large Space Platforms Future Needs and Capabilities*, Los Angeles, Calif., Sept 27-29, 1978, Paper 78-1684. 8 p. 5 refs. Contract No. NAS9-15196.

A solar power satellite is the energy-converting element of a system that can deliver some 10 GW of power to utilities on the earth's surface. We evaluated heat engines and solar cells for converting sunshine to electric power at the satellite. A potassium Rankine cycle was the best of the heat engines, and 50 microns thick single-crystal silicon cells were the best of the photovoltaic converters. Neither solar cells nor heat engines had a clear advantage when all factors were considered. The potassium-turbine power plant, however, was more difficult to assemble and required a more expensive orbital assembly base. We therefore based our cost analyses on solar-cell energy conversion, concluding that satellite-generated power could be delivered to utilities for around 4 to 5 cents a kWh.

A78-52005 * # The 25 kW power module - First step beyond the baseline STS. G W Mordan (NASA, Marshall Space Flight Center, Huntsville, Ala.) *American Institute of Aeronautics and Astronautics, Conference on Large Space Platforms Future Needs and Capabilities, Los Angeles, Calif., Sept 27-29, 1978, Paper 78-1693* 6 p

The backbone of the first reusable Space Transportation System (STS) is the Space Shuttle. The 25 kW Power Module is currently being defined by NASA as the first significant increment in capability beyond the baseline STS and is to be available for use in 1983. The Power Module is an orbit-based space system which will augment the capability of the Space Shuttle Orbiter to support Spacelab sortie missions and will provide a unique free-flying mode for a variety of payloads which require high capability, long duration, and man-tended operation. The Power Module will make it possible for the Space Shuttle Orbiter and Spacelab to remain on-orbit for periods of time significantly in excess of that provided by the baseline STS (7 days) without major penalty to the Shuttle and its payload. A78-52076 The physics of MHD generators. A V Nedospasov (Akademii Nauk SSSR, Nauchno-Issledovatel'skii Institut Vysokikh Temperatur, Moscow, USSR) (*Uspekhi Fizicheskikh Nauk*, vol. 123, Oct 1977, p 333-348.) *Soviet Physics - Uspekhi*, vol. 20, Oct 1977, p 861-869. 13 refs. Translation.

Physical phenomena occurring in plasma MHD electrical-energy generators are reviewed. Distinctions between closed- and open-cycle MHD generators are summarized, the mechanism of interaction between a weakly ionized gas and a transverse magnetic field is examined, and the major possible instabilities of such a flow are explained qualitatively along with various effects arising near the electrodes. Some properties of the plasma in MHD generators with nonequilibrium conductivity are discussed, including ionization turbulence, ionization-front propagation through the weakly ionized gas, and ionization-front stabilization at the MHD-channel inlet. Data are presented which illustrate recent achievements in open-cycle MHD generator development. F G M

A78-52083 # The behavior of Arken nucleus plumes from coal-fired power plants in the Midwest. A H Auer, Jr and M J Komp (Wyoming, University, Laramie, Wyo.) In Joint Conference on Applications of Air Pollution Meteorology, Salt Lake City, Utah, November 29-December 2, 1977, Preprints. Boston, Mass., American Meteorological Society, 1978, p 29-32. 6 refs. A78-52146 * # Alternative approaches to plasma confinement. J R Roth (NASA, Lewis Research Center, Cleveland, Ohio) *IEEE Transactions on Plasma Science*, vol. PS-6, Sept 1978, p 270-295. 78 refs.

The paper discusses 20 plasma confinement schemes each representing an alternative to the tokamak fusion reactor. Attention is given to: (1) tokamak-like devices (TORMAC, Topolotron, and the Extrap concept), (2) stellarator-like devices (Torsatron and twisted-

coil stellarators), (3) mirror machines (Astron and reversed-field devices, the 2XII B experiment, laser heated solenoids, the LITE experiment, the Kaktus-Surmac concept), (4) bumpy tori (hot electron bumpy torus, toroidal minimum-B configurations), (5) electrostatically assisted confinement (electrostatically stuffed cusps and mirrors, electrostatically assisted toroidal confinement), (6) the Migma concept, and (7) wall confined plasmas. The plasma parameters of the devices are presented and the advantages and disadvantages of each are listed. S C S

A78-52149 Diffusive losses and scaling law for large tokamaks. C R Harder and D K Bhadra (General Atomic Co., San Diego, Calif.) *IEEE Transactions on Plasma Science*, vol. PS-6, Sept 1978, p 317-328. 15 refs. Contract No. EY-76-C-03-0167 PA 38.

The paper discusses a multiparameter model for plasma diffusion in a reactor size tokamak device. Limitations to density and temperature due to global hydromagnetic equilibrium and macrostability requirements are noted. Consideration is given to the collisionless regime where plasma energy degradation is primarily due to microinstabilities caused by trapped electrons and ions. With reference to a reactor using scaling concepts, ignition and burn equilibrium are outlined within the framework of a time-dependent zero space-dimensional computer code. Results are given for confinement scaling, reactor power and density development in time, and the attainment of burn equilibrium. S C S

A78-52193 Primary Li/SOCl₂ cells. IV - Cathode reaction profiles. A N Dey and P Bro (P R Mallory and Co., Inc., Laboratory for Physical Science, Burlington, Mass.) (*Electrochemical Society, Meeting, Las Vegas, Nev., Oct 17-22, 1976*) *Electrochemical Society, Journal*, vol. 125, Oct 1978, p 1574-1578. 11 refs.

The Li/SOCl₂ inorganic electrolyte system is one of the highest energy density systems known to date. The system consists of a Li anode, a porous carbon cathode, and an LiAlCl₄-SOCl₂ electrolyte. The reported investigation had the objective to determine the reaction profiles (both cross-sectional and longitudinal) of the porous carbon cathodes used in the Li/SOCl₂ D cells to assess its performance-limiting characteristics in some detail. The ultimate objective of these studies is to improve the porous carbon cathodes so that they may perform efficiently at high current densities, thus possibly eliminating the need of two types of cells for high and low rate applications. The obtained cross-sectional reaction profiles of the carbon cathodes show that mass transport through the porous carbon is the limiting feature of the cathodes. G R

A78-52195 S/Se substitution in polycrystalline CdSe photoelectrodes - Photoelectrochemical energy conversion. D Cahen, G Hodes, and J Manassen (Weizmann Institute of Science, Rehovot, Israel) *Electrochemical Society, Journal*, vol. 125, Oct 1978, p 1623-1628. 20 refs. U.S.-Israel Binational Science Foundation Grant No. 1314.

A description is presented of results which have been obtained by X-ray photoelectron spectroscopy (XPS). The results show the occurrence of S/Se substitution both in the light and in the dark. Additional evidence is given which supports such a substitution and the resulting effect of it on the conversion efficiency and stability of CdSe electrodes in polysulfide solutions. The mechanism of the substitution is discussed. On the basis of the obtained data a band scheme is presented for the polysulfide electrolyte CdS-CdSe system in which the CdS layer is considered as essentially an insulator. The substitution phenomenon is used as a basis for an explanation of the difference in behavior between polycrystalline and single crystal electrodes taking into account also the short- and long-term changes in photovoltage and photocurrents obtained from such a photoelectrochemical cell. A78-52198 * Recovery of shallow junction GaAs solar cells damaged by electron irradiation. G H Walker and E J Conway (NASA, Langley Research Center, Hampton, Va.) *Electrochemical Society, Journal*, vol. 125, Oct 1978, p 1726, 1727.

Solar cells operated in space are subject to degradation from electron and proton radiation damage. It has been found that for deep junction p-GaAlAs/p-GaAs solar cells some of the electron radiation damage is removed by annealing the cells at 200 C. The reported investigation shows that shallow junction p-GaAlAs/p-GaAs/n-GaAs heteroface solar cells irradiated with 1 MeV electrons show a more complete recovery of short-circuit current than do the deep junction cells. The heteroface p-GaAlAs/p-GaAs/n-GaAs solar cells studied were fabricated using the etch-back epitaxy process.

A78-52236 Numerical modeling of a desaturating geothermal reservoir. R. N. Horne (Stanford University, Stanford, Calif.) and M. J. O'Sullivan (Auckland University, Auckland, New Zealand). *Numerical Heat Transfer*, vol 1, Apr-June 1978, p 203-216. 15 refs. New Zealand Energy Research and Development Committee Contract No. 3039.

The Wairakei geothermal field is modeled in a single-phase axisymmetric representation in which fluid is withdrawn through bores grouped around the axis and replaced at the surface. Assumptions include the Boussinesq property, negligibility of inertial effects, constant viscosity and constant thermal expansion coefficient. Drawdown and production are modeled. The model is run for two operating procedures: dwindling production over a long period of time, and sustained production over a shorter period. P. T. H.

A78-52252 # Wind power resources and methods for evaluating them (Vetroenergeticheskie resursy i metody ikh otsenki). L. E. Anapol'skaia and L. S. Gandin (Glavnaia Geofizicheskaya Observatoriia, Leningrad, USSR). *Meteorologiya i Gidrologiya*, July 1978, p 11-17. 5 refs. In Russian.

The described procedure for evaluating the attainable wind power utilization for given climatic conditions uses data on the statistical distribution of wind velocity patterns as well as wind-power generator parameters. It is demonstrated that the annual variation in air density can be ignored in the calculation of mean annual wind power resources. Calculations of climatic mean annual wind power resources for a number of areas with strong winds are reported, and the likelihood of utilizing wind power in the USSR is examined.

A78-52500 Fluidized-bed energy technology: Coming to a boil. W. C. Patterson and R. Griffin. Research supported by the U.S. Department of Energy and Rockefeller Brothers Fund. New York, INFORM, Inc., 1978. 141 p. 47 refs. \$45.

Fluidized-bed combustion may play a significant role in permitting the burning of coal in an environmentally acceptable manner, a step forward towards the widespread use of clean technologies. Additionally, this technology offers the user flexibility in burning virtually any type of fuel, individually or simultaneously, without significant boiler modifications. A review is presented of the worldwide status of research, development, demonstration, and commercialization of fluidized bed combustion. Attention is given to the basic principles of fluidized-bed operation, aspects of historical development, environmental implications, prospects for commercialization, and the profiles of major organizations with respect to fluidized-bed combustion research and developments.

A78-52548 Performance and NOx emissions of spark ignited combustion engines using alternative fuels - Quasi one-dimensional modeling. II - Methanol fueled engines. M. B. Rubin and W. J. McLean (Cornell University, Ithaca, N.Y.). *Combustion Science and Technology*, vol 18, no 5-6, 1978, p 199-206. 19 refs. U.S. Department of Transportation Grant No. OS-30113.

A thermodynamic model employing a one-dimensional semi-empirical flame speed has been used to evaluate methanol as a reciprocating engine fuel. The empirical parameters in the flame speed were determined by matching computed combustion durations with experimental values reported in the literature. Satisfactory agreement was obtained between predicted and measured values for power, efficiency and NOx emissions. The model predicts maximum

thermal efficiency of the methanol engine for equivalence ratios in the 0.7 to 0.8 range. This is within practical operating range, as experiments have shown the lean misfire limit to be near an equivalence ratio of 0.6. No emissions are predicted to reach a maximum near an equivalence ratio of 0.9 and are reduced by about two-thirds at an equivalence ratio of 0.75. Addition of water to methanol is shown to significantly reduce NOx emissions, although with some loss in thermal efficiency. Improved fuel economy without excessive NOx emissions can be obtained by employing methanol-water blends at high compression ratios. (Author)

A78-52550 Synthesis and flammability limits of low-Btu gas mixtures. W. M. Heffington (Texas A & M University, College Station, Tex.). *Combustion Science and Technology*, vol 18, no 5-6, 1978, p 229-233. 23 refs. Research supported by Texas A & M University.

Representative low-Btu gas mixtures derived from coal are presented and simplified, resulting in synthetic low-Btu gas mixtures composed of H₂, CO, CH₄, and CO₂. Mine-atmosphere flammability data are applied to the synthetic mixtures to produce flammability limits at one atmosphere and 77 F. Two-component synthetic mixtures of CH₄ and an inert gas are shown to be not suitable for certain combustion experiments requiring low-Btu gases. (Author)

A78-52597 OTEC - Electricity from the ocean. W. F. Whitmore (Lockheed Missiles and Space Co., Inc., Sunnyvale, Calif.). *Technology Review*, vol 81, Oct 1978, p 58-63.

Although thermodynamically inefficient (2.5%), OTEC plants become competitive in view of the fact that the fuel (sun's energy) is free. Major cost element is the massive heat exchangers operating at 40 F temperature differences of less than 40 F. A design for a single 25-MW modular unit requires about 640 miles of two-inch tubing, in either aluminum or titanium. Methods of removing slime from the heat exchangers without detriment to marine environment are being developed. The current estimate for the cost of a moored OTEC plant is about \$2000/kW capacity, with costs decreasing with improvements in heat exchangers.

P. T. H.

A78-52599 Specific energy consumption of the transport modes - A new systematic consideration (Spezifischer Energieverbrauch der Verkehrsträger - Eine neue systematische Betrachtung). K. Bauermeister (Deutsche Bundesbahn, Frankfurt am Main, West Germany). *Elektrische Bahnen*, vol 49, Sept 1978, p 220-224. In German.

The data regarding the specific energy consumption of the modes of transport reported from different sources are listed in a table. It is found that values for the same mode of transport provided by different investigations differ from each other within a comparatively wide range. Ratios of 1.4 are observed, for instance, for values concerning the specific energy consumption in the case of buses. Even greater variations are observed for the values determined for the specific energy consumption in the transportation of freight. It appears, therefore, that the considered data do not provide a satisfactory basis to derive reliable conclusions regarding the relative standing of two modes of transport with respect to the consumption of primary energy involved in a specific case involving the transport between two given locations. To obtain values which can be used for such evaluations it will be necessary to take into account the specific conditions for which the values have been determined. Attention is in this connection given to study which is concerned with the general, intermediate, and fine structure of transport relations. G. R.

A78-52625 Graded band-gap pAl(x)Ga(1-x)As-nGaAs heterojunction solar cells prepared by molecular beam epitaxy. N. Matsunaga and K. Takahashi (Tokyo Institute of Technology, Tokyo, Japan). *International Journal of Electronics*, vol 45, Sept 1978, p 273-282. 9 refs.

Molecular beam epitaxy is used to fabricate graded band-gap pAl(x)Ga(1-x)As-nGaAs heterojunction solar cells. The composition profile is examined by Auger electron spectroscopy with ion

sputter-etching and ion microprobe analysis. For the alloy obtained by varying the temperature of effusion cells linearly with time, the profile becomes ideal so as to drive carriers generated near the surface toward the junction. In the presence of the internal electric field, the carriers generated near the surface by shorter-wavelength photons are collected effectively before they recombine through the surface states, so that the collection efficiencies are substantially improved. The spectral response of the graded band-gap cell compared with abrupt heterojunction cells with $\text{Al}(x)\text{Ga}(1-x)\text{As}$ layers of uniform composition shows the improvement of the collection efficiency in the region of shorter wavelength as well as the effect of the internal electric field. A78-52721 **Underground coal gasification.** D W Gregg (California, University, Livermore, Calif.) and T F Edgar (Texas, University, Austin, Tex.) *AICHE Journal*, vol 24, Sept 1978, p 753-781. 142 refs. Research supported by the U.S. Department of Energy, Continental Oil Co., Mobil, Texas Utilities, Shell Oil Co., Dow Chemical Co., Atlantic Richfield Co., SUNEDCO, Lone Star Gas, DuPont de Nemours and Co., and NSF.

The historical development of underground coal gasification is examined and the field design of an underground coal gasification system is considered, taking into account the Soviet system for underground coal gasification, the significance of enhanced coal permeability, a field design for steeply dipping coal seams, a field design for horizontal coal seams, the critical channel width, the maintenance of constant composition of product gas, and aspects of system efficiency. The chemistry and physics of underground coal gasification are considered along with the plastic properties of coal and their importance to underground coal gasification, current field testing results, and the modeling of underground coal gasification. Attention is given to aspects of system identification, chemical composition models, and heat transfer and channel growth during in situ gasification. G R

A78-52722 **A model for moving-bed coal gasification reactors.** H Yoon (Delaware, University, Newark, Del.), Conoco Coal Development Co., Libraryville, Pa.), J Wei (Delaware, University, Newark, Del.), MIT, Cambridge, Mass.), and M M Denn (Delaware, University, Newark, Del.) *AICHE Journal*, vol 24, Sept 1978, p 885-903. 58 refs. Research supported by the Electric Power Research Institute.

A steady state model of moving-bed coal gasification reactors has been developed. Model predictions are in agreement with published commercial plant data for Lurgi pressurized gasification reactors and a pilot plant slagging gasifier. The dependence of reactor performance on operating variables has been studied for Illinois and Wyoming coals. For a given coal, maximum efficiency is determined by the coal-to-oxygen feed ratio. The location of the maximum temperature, which defines the combustion zone, is an important operating variable. Efficient operation of the dry ash reactor cannot be carried out below a critical feed gas temperature because of insufficient gasification and excessive carbon loss in the ash.

A78-52742 # **Automatic fabrication of large space structures - The next step.** W K Muench (Grumman Aerospace Corp., Bethpage, N.Y.) *American Institute of Aeronautics and Astronautics, Conference on Large Space Platforms: Future Needs and Capabilities*, Los Angeles, Calif., Sept 27-29, 1978, Paper 78-1651. 8 p.

An outline is presented of a plan which will lead to the establishment of an operational five giga watt solar power satellite in space. A detailed description is presented of the first stage of this plan. This stage is concerned with the development of a machine that is to be employed to produce the basic building block beams in space, which are used in the assembly of the large space structures required. A ground demonstration version of this machine has already been completed. After the feasibility of automatically producing beams has been successfully demonstrated, questions arise concerning the next step which has to be taken. One possible answer

to this question is discussed, taking into account the development of a special end effector for the Space Shuttle's remote manipulator system. G R

A78-52746 * **Photovoltaic power-system options for the manned space construction base.** G G McKhann (McDonnell Douglas Astronautics Co., Huntington Beach, Calif.) *American Institute of Aeronautics and Astronautics, Conference on Large Space Platforms: Future Needs and Capabilities*, Los Angeles, Calif., Sept 27-29, 1978, Paper 78-1683. 20 p. 7 refs. Contract No. NAS9-14958.

The function of the proposed manned Space Construction Base (SCB) is to provide a permanent manned orbital facility for the construction and operation of a variety of space experiments, ranging from a space-processing development to on orbit constructed microwave radiometers and antennas. A typical SCB system might reach initial operational capability in low earth orbit in 1985, have a 10-year mission duration, and have an initial power requirement of 50 kW. A summary of the requirements imposed by the SCB on the electrical power system (EPS) is presented in a table. Attention is given to EPS options, baseline power platform system operations, an energy storage system evaluation, advanced-technology NiCd batteries and lifetime, and orbital buildup operations. G R

A78-52764 # **Steady-state action magnetoplasmodynamic source (Magnitoplazmodinamicheskii istochnik statsionarnogo deistviya).** V S Ermachenko, F B Iurevich, M N Rolin, A Ia Venger, and V N Borisiuk (Akademiya Nauk Belorusskoi SSR, Institut Teplo i Massoobmena, Minsk, Belorussian SSR) *Inzhenerno-Fizicheskii Zhurnal*, vol 35, Sept 1978, p 459-465. 10 refs. In Russian.

The paper describes a magnetoplasmodynamic generator with magnetic arc, the generator operates at powers ranging up to 400 kW. Experimental results are presented on the electrical and thermal properties of the generator. Volt-ampere characteristics as well as mean-mass enthalpy are studied as a function of power supplied to the arc, magnetic flux density in the discharge region, and working gas flow rate. B J

A78-52770 # **Rankine-cycle systems with organic working fluids and prospects of the application of such systems in the solar energy field (Review).** (Paroturbinnnye ustanovki s organicheskimi rabochimi telami i perspektivy ikh primeneniya v gelioenergetike (Obzor)) V A Grilikhes, M M Grishutin, and V S Evseev. *Geliotekhnika*, no 4, 1978, p 3-18. 43 refs. In Russian.

The basic characteristics of cycles and energy converters for Rankine cycle electric energy systems with organic heat-exchange fluids are surveyed. Consideration is also given to the basic design features of such systems, with emphasis on the heat exchange equipment (steam generators, regenerators, and condensers). The application of such organic systems to the production of electric power from low-potential heat sources - solar radiation, geothermal waters, and industrial waste heat - is considered. It is found that the use of organic heat-exchange fluids will lead to considerable cost-savings. B J

A78-52771 # **Thermodynamic analysis of a combined gas-turbine-thermoelectric solar energy converter (Termodinamicheskii analiz kombinirovannogo GTU-TEG preobrazovatelja solnechnoi energii).** L M Drabkin (Tashkentskii Institut Zheleznodorozhnogo Transporta, Tashkent, Uzbek SSR) *Geliotekhnika*, no 4, 1978, p 19-22. In Russian.

Consideration is given to the thermodynamic cycle of a solar energy system consisting of a thermoelectric generator connected to a gas turbine. Expressions are obtained for the efficiency and specific area of the refrigerator-radiator of such a system. This combined scheme is compared with a Brayton-cycle system with respect to optimization in terms of efficiency and specific area. B J

A78-52772 # Optimization of the exponential distribution of dopant in the base of a semiconductor photocell (Optimizatsia eksponentsial'nogo raspredelenia legiruiushchei primesi v baze poluprovodnikovogo fotopreobrazovatelya) V M Evdokimov and Iu D Lisovskii (Vsesoiuznyi Nauchno-Issledovatel'skii Institut Istoknikov Toka, Moscow, USSR) *Geliotekhnika*, no 4, 1978, p 23-29 17 refs In Russian

A theoretical analysis is presented of the effect of the uniform electric field produced by an exponential distribution of dopants in the base of a photocell of finite thickness on the accumulation of charge carriers. It is assumed that the mobility and lifetime of carriers depend in power law fashion on dopant concentration. An optimal field strength is determined and the dependence of the field on the parameters of the semiconductor and the wavelength of incident light is considered. B J

A78-52773 # Effect of temperature on the operational parameters of pCdTe-nCdS thin-film photocells (Vliianie temperatury na ekspluatatsionnye parametry plenochnykh pCdTe-nCdS-fotopreobrazovatelya) S A Azimov, Sh A Mirsagatov, D T Rasulov, and N Iunusov (Akademiya Nauk Uzbekskoi SSR, Fiziko-Tekhnicheskii Institut, Tashkent, Uzbek SSR) *Geliotekhnika*, no 4, 1978, p 30-32 In Russian

A78-52774 # Thermal detector of solar energy with selective coating and vacuum thermal-insulation (Teplopriemnik solnechnoi energii s selektivnym pokrytiem i vakuumnoi teploizolatsiei) G Ia Umarov, V S Trukhov, U Kh Gaziev, T Baimatov, T Z Abidov, and Iu E Kluchevskii (Akademiya Nauk Uzbekskoi SSR, Fiziko-Tekhnicheskii Institut, Tashkent, Uzbek SSR) *Geliotekhnika*, no 4, 1978, p 46-50 8 refs In Russian

The paper describes two design modifications of a solar-thermal-radiation detector with selective coating and screening vacuum insulation which operates reliably up to temperatures of 400 C. A method for calculating the operational characteristics of the detector is presented. Curves reflecting the dependence of thermal losses and efficiency on detector temperature for different modifications of the detector system and different solar energy densities are presented. B J

A78-52776 Photovoltaic Solar Energy Conference, Luxembourg, September 27-30, 1977, Proceedings Conference sponsored by the Commission of the European Communities. Dordrecht, D Reidel Publishing Co., 1978 1378 p. In English, French, and German \$66 15

Recent developments and general aspects concerning silicon are considered along with the preparation of silicon material, polycrystalline silicon cells, the production of silicon cells from amorphous material, the fabrication of silicon concentrator solar cells, and silicon heterojunction cells. Attention is given to fundamental studies regarding photovoltaic devices, concentration devices, GaAs and similar cells, national activities and programs with respect to solar cells, CdS and similar cells, questions of module engineering, measurement problems, and systems and applications. G R

A78-52777 Introduction to the 1977 Photovoltaic Solar Energy Conference (Introduction à la Conférence de 1977 sur la Conversion Photovoltaïque de l'Énergie Solaire) R Chabbal and M Rodot (Centre National de la Recherche Scientifique, Paris, France) In *Photovoltaic Solar Energy Conference, Luxembourg, September 27-30, 1977, Proceedings* Dordrecht, D Reidel Publishing Co., 1978, p 29-50 In French

The paper reviews economic aspects and R&D aims in the photovoltaic conversion field. Particular attention is given to the short-term or medium-term aim of improving the technology of single-crystal silicon solar cells. Consideration is also given to the long-term aim of developing the second generation of solar cells: polycrystalline and amorphous silicon cells, GaAs cells, and cells based on CdTe and Cu₂S. Technical data on solar cells are presented. B J

A78-52778 Silicon solar cells from polycrystalline material H Fischer (Telefunken AG, Heilbronn, West Germany) In *Photovoltaic Solar Energy Conference, Luxembourg, September 27-30, 1977, Proceedings* Dordrecht, D Reidel Publishing Co., 1978, p 52-75 32 refs

This paper is intended to provide a review of the current status and the trends in the development of efficient low cost polycrystalline silicon solar cells. Theoretical estimates indicate that a reasonable conversion efficiency can be expected with this kind of cell, if both controlled size and structure of the grains can be achieved. Various methods producing polycrystalline silicon sheets are pursued: (a) films deposited by vacuum evaporation or CVD on non-silicon and MG-silicon substrates, (b) direct use of silicon as-cast as ingot or foil. As demonstrated recently, nonsingle crystalline solar cells have achieved promising characteristics. But considerable development and engineering efforts are still required for all processes to meet the long-range cost goals. (Author)

A78-52779 * New developments in silicon solar cells. J Lindmayer (Solarex Corp., Rockville, Md.) In *Photovoltaic Solar Energy Conference, Luxembourg, September 27-30, 1977, Proceedings* Dordrecht, D Reidel Publishing Co., 1978, p 76-91 9 refs. Contracts No JPL-954290, No F33615-76-C-2058

Three areas of silicon solar cell development are discussed. The first area relates to ultra thin cells about 50 microns in thickness, which can be made with relative good yield and efficiency. The second describes a new effort in vertical junction cells which show increased efficiency and continues to improve. The third area describes our semicrystalline silicon work which resulted in silicon solar cells that show over 10% terrestrial conversion efficiency and are tolerant to impurities. (Author)

A78-52780 Process to reduce the manufacturing cost of monocrystalline silicon solar cells H Lauvray and Y Salles (RTC La Radiotechnique-Compelec, Paris, France) In *Photovoltaic Solar Energy Conference, Luxembourg, September 27-30, 1977, Proceedings* Dordrecht, D Reidel Publishing Co., 1978, p 92-103

The paper discusses several production techniques whose implementation will lead to a reduction in the manufacturing costs of single-crystal silicon solar cells. These techniques include: (1) increasing the diameter of ingots, accompanied by an improvement in machining, (2) the use of large slices in a simple manufacturing range, which leads to improved efficiency and lifetime, and (3) the development of new encapsulation techniques. B J

A78-52781 High performance thin solar cell S Y Chiang, B G Carbajal, and G F Wakefield (Texas Instruments, Inc., Dallas, Tex.) In *Photovoltaic Solar Energy Conference, Luxembourg, September 27-30, 1977, Proceedings* Dordrecht, D Reidel Publishing Co., 1978, p 104-112 12 refs

A tandem junction cell (TJC) has been developed which has collecting junctions on both the illuminated and dark sides. The I-V photoresponse performance of the cell was measured for the case of collection from both sides and for the case of collection from the dark side only. Current collected from both sides of a 100-micron-thick cell was approximately 46 mA/sq cm, with the maximum expected at 30-50 microns. Current collected from the dark side only was 34 mA/sq cm for a 125-micron-thick cell, with 45 mA/sq cm expected for 30-50 microns. B J

A78-52782 Study of ion implanted n+/plus/ layers for silicon solar cells F Zignani (Bologna, Università, Bologna, Italy), F Cembali, R Galloni, L Pedullì, and M Servidori (CNR, Laboratorio LAMEL, Bologna, Italy) In *Photovoltaic Solar Energy Conference, Luxembourg, September 27-30, 1977, Proceedings* Dordrecht, D Reidel Publishing Co., 1978, p 113-124 13 refs. Consiglio Nazionale delle Ricerche Contract No 195,76,7,ESI

Phosphorus ions have been implanted - at energies of 100-150 keV at a constant dose of 2×10^{10} to 15 atm/sq cm - in silicon

single crystals. Experimental results are presented regarding isochronal recovery, charge carrier profiles, radiation damage, low temperature annealing, and solar cell volt-ampere characteristics. Particular attention is given to residual damage, responsible for the reduction of the lifetime of minority carriers in the n(plus) layer. The results have suggested the possibility of realizing a 'cold' solar cell by ion implantation. B J

A78-52784 Chemical vapour deposition of silicon on a liquid tin layer. M W M Graef, L J Giling, and J Bloem (Nijmegen, Katholieke Universiteit, Utrecht, Netherlands). In Photovoltaic Solar Energy Conference, Luxembourg, September 27-30, 1977, Proceedings. Dordrecht, D Reidel Publishing Co., 1978, p 136-142

A78-52785 Recrystallization of CVD grown polycrystalline silicon. W J H Schins, J Bezemer, C Daey Ouwens, and S Radelaar (Utrecht, Rijksuniversiteit, Utrecht, Netherlands). In Photovoltaic Solar Energy Conference, Luxembourg, September 27-30, 1977, Proceedings. Dordrecht, D Reidel Publishing Co., 1978, p 143-152. 6 refs. Research supported by the European Communities.

A78-52787 Continuous polycrystalline silicon layers on carbon substrates. C Belouet, J J Brissot, R Martres, and Mr Ngo Tich Phuoc (Laboratoires d'Electronique et de Physique Appliquée, Limeil-Brévannes, Val-de-Marne, France). In Photovoltaic Solar Energy Conference, Luxembourg, September 27-30, 1977, Proceedings. Dordrecht, D Reidel Publishing Co., 1978, p 164-175. 15 refs. Research sponsored by the Commission of European Communities.

This article presents the early results of the study of the freezing of silicon films on carbon substrates by the ribbon against drop (RAD) pulling process in view of achieving low-cost solar cells for terrestrial applications. The main features relevant to this new deposition process are outlined, and the physical performances of the polycrystalline layers thus obtained are described. In particular, it is shown that the size of the columnar grains can be large (300 x 200 microns) and that encouraging conversion efficiencies above 6 percent (AM1 simulated illumination) have already been obtained on n(plus)/p diffused structures. (Author)

A78-52788 Polycrystalline silicon solar cells. E Fabre and Y Baudet (Laboratoires d'Electronique et de Physique Appliquée, Limeil-Brévannes, Val-de-Marne, France). In Photovoltaic Solar Energy Conference, Luxembourg, September 27-30, 1977, Proceedings. Dordrecht, D Reidel Publishing Co., 1978, p 178-186. 14 refs. Research supported by the Délégation Générale à la Recherche Scientifique et Technique.

Solar cells have been made on polycrystalline silicon layers deposited onto a carbon substrate from the melt. Three different structures have been investigated for the collecting junction: the n(plus)/p diffused homojunction, the MIS barrier and the heterojunction with In₂O₃. A conversion efficiency of 62 percent is reported for a homojunction cell under AM1 simulated sunlight. Minority carrier diffusion length enhancement has been observed when the photon flux is increased on the cell. (Author)

A78-52789 Polycrystalline solar cells fabricated on metallurgical silicon substrates. T Warabisako, T Saitoh, H Itoh, N Nakamura, and T Tokuyama (Hitachi, Ltd., Central Research Laboratory, Kokubunji, Tokyo, Japan). In Photovoltaic Solar Energy Conference, Luxembourg, September 27-30, 1977, Proceedings. Dordrecht, D Reidel Publishing Co., 1978, p 187-196. 7 refs. Research supported by the Ministry of International Trade and Industry of Japan.

One way to reduce solar cell cost is the fabrication of a thin-film active layer on polycrystalline silicon substrate prepared from metallurgical-grade material. A cell of 8.3-sq cm area is found to exhibit an AM1 conversion efficiency of 7.3% when a 25-micron-

thick p-type active layer is grown on a CZ-pulled polycrystalline silicon wafer by a CVD process using SiH₂Cl₂, followed by the formation of a grown junction with a 0.54-micron thick n(plus)-layer. The photocurrent degradation due to grain boundaries was estimated to be less than 3% under light at a wavelength of 0.6 micron. B J

A78-52790 The limitations imposed by grain boundaries on the performance of epitaxially deposited polycrystalline silicon solar cells. G A van der Leeden, T L Chu, and C J Lin (Southern Methodist University, Dallas, Tex.). In Photovoltaic Solar Energy Conference, Luxembourg, September 27-30, 1977, Proceedings. Dordrecht, D Reidel Publishing Co., 1978, p 197-206. 8 refs. Contract No. E(04-3)-1285.

A78-52791 Progress on aluminium p-type silicon SBSCs. W G Townsend and D R Lillington (Royal Military College of Science, Shrivenham, Wilts, England). In Photovoltaic Solar Energy Conference, Luxembourg, September 27-30, 1977, Proceedings. Dordrecht, D Reidel Publishing Co., 1978, p 207-213.

A simple process is described for making aluminium p-type silicon SBSCs (Schottky barrier solar cells) on both single crystal and Wacker 'Silso' cast silicon substrates. The importance of the processing of the interfacial oxide layer in determining both cell efficiency and stability is stressed. Results of both electrical and optical properties of the cells are presented. These show that consistently high AM1 efficiencies of over 9 and 8% respectively may be achieved for single and cast silicon substrates and that the characteristics are stable over long periods of testing. The cells were all approximately 1 sq cm in area and coated with simple ZnS coatings. The high short circuit currents (approximately 22 mA/sq cm) obtained for the polycrystalline substrates indicate that grain boundary recombination is not a serious problem with these devices. (Author)

A78-52792 A model for amorphous silicon solar cells. B T Debney (Plessey Co., Ltd., Allen Clark Research Centre, Towcester, Northants, England). In Photovoltaic Solar Energy Conference, Luxembourg, September 27-30, 1977, Proceedings. Dordrecht, D Reidel Publishing Co., 1978, p 216-222. 8 refs.

The paper shows that the photocurrent in amorphous silicon solar cell is determined by the photogeneration of carriers in the depletion region and their subsequent removal with the aid of the built-in field. This is confirmed by an analysis of the spectral response curve for a p-i-n device. The I-V characteristics for a model Schottky barrier solar cell under illumination are calculated. B J

A78-52795 Fabrication and measurement of silicon concentrator solar cells. J F Gibbons and F C Wu (Stanford University, Stanford, Calif.). In Photovoltaic Solar Energy Conference, Luxembourg, September 27-30, 1977, Proceedings. Dordrecht, D Reidel Publishing Co., 1978, p 242-248.

Basic considerations relevant to the design of epitaxial silicon solar cells for concentrator applications are presented, including specific criteria for selecting the thickness of the epitaxial layer, the contact geometry, and the anti-reflection coating. Measurements made on cells fabricated according to the principles discussed show efficiencies at 20 suns of 16.5% at 30°C and 12.6% at 100°C. These values compare very favorably with theoretical expectations. The use of a continuous Ar laser for measurement of cell efficiency versus concentration is also described. (Author)

A78-52796 High intensity silicon solar cells. E Fabre (Laboratoires d'Electronique et de Physique Appliquée, Limeil-Brévannes, Val-de-Marne, France), L De Smet, and R Mertens (Leuven, Katholieke Universiteit, Heverlee, Belgium). In Photovoltaic Solar Energy Conference, Luxembourg, September 27-30, 1977, Proceedings. Dordrecht, D Reidel Publishing Co., 1978, p 249-258. 7 refs. Research supported by the Commission des Communautés Européennes.

Optimization of 2×2 sq cm silicon solar cells for operation under medium range solar concentration has been carried out both theoretically and experimentally. A series resistance as low as 20 milliohms is shown to be necessary in order to keep the conversion efficiency above 12 percent for concentration ratios ranging between 20 and 50. Back surface field cells have been made with optimized top contact grid pattern on a 1 ohm cm base material. The influence of the diffused layer sheet resistance upon the series resistance and the photogenerated current has been investigated. A comparison between computed series resistance values and measured ones is presented. (Author)

A78-52797 Sunlight concentration for silicon rod solar cells. G. R. Johnson, M. G. Miles, D. P. Tanner (Monsanto Co., St. Louis, Mo.), and G. L. Ball, III (Monsanto Research Corp., Dayton, Ohio). In Photovoltaic Solar Energy Conference, Luxembourg, September 27-30, 1977, Proceedings. Dordrecht, D. Reidel Publishing Co., 1978, p. 259-268, 7 refs.

Solar cell devices were made using diffused junctions on the surface of 4mm silicon rods together with non-tracking, 'ideal' trough concentrators. Two embodiments of the ideal concentrator design were studied: metallized opaque plastic forms and internally reflecting clear plastic castings. Combined solar cell/concentrator efficiencies of 10% were measured and efficiencies of 12% are projected. Small diameter silicon rod is considered as a high efficiency alternative to silicon ribbon for use in trough concentrators. (Author)

A78-52798 Double sided /DS/ solar cells to improve static concentration. A. Luque, J. M. Ruiz, A. Cuevas, J. Eguren, and M. G. Agost (Madrid, Universidad Politecnica, Madrid, Spain). In Photovoltaic Solar Energy Conference, Luxembourg, September 27-30, 1977, Proceedings. Dordrecht, D. Reidel Publishing Co., 1978, p. 269-277, 7 refs.

Solar cells to be illuminated on both sides by placement in proper Winston mirrors have been developed to permit double static concentration gain for a given acceptance angle. Theory and experiments show that the product of open circuit voltage and short-circuit current is higher in double sided (DS) cells than in conventional or BSF cells. The DS cells have high series resistance which reduces the efficiency of experimental structures to 7 percent at two AM2 suns. A theoretical model of the DS structure series resistance is presented showing that, with proper metallization patterns, efficiencies of 11 percent at ten AM2 suns can be attained. (Author)

A78-52799 Improvement of the efficiency of silicon MIS-inversion layer solar cells. P. Van Halen, R. Mertens, R. Van Overstraeten, J. Van Meerbergen (Leuven, Katholieke Universiteit, Heverlee, Belgium), and R. E. Thomas (Carleton University, Ottawa, Canada). In Photovoltaic Solar Energy Conference, Luxembourg, September 27-30, 1977, Proceedings. Dordrecht, D. Reidel Publishing Co., 1978, p. 280-288, 8 refs. Research supported by the Nationaal Fonds voor Wetenschappelijk Onderzoek.

Two new types of solar cells are described in which either a TiO_x or a SiO_2 layer is deposited onto p-silicon, contacts are obtained by means of a MIS tunnel-diode grid. It is shown that the TiO_x -MIS cells can be realized by single mask completely low temperature processing by employing spin-on of titanium-oxide antireflective coating. Conversion efficiencies of 8% at AM1 have been achieved with these cells, they perform even more efficiently at higher illumination levels. With the SiO_2 MIS cells efficiencies of 12% have been reached, at the expense of a more complicated process. A detailed comparison between the two cells is given. (Author)

A78-52800 Preparation and investigation of Sn doped Si/n-In2O3 heterojunction. J. C. Manificier, L. Szepeessy, and M. Savelli (Montpellier II, Universite, Montpellier, France). In Photovoltaic Solar Energy Conference, Luxembourg, September 27-30, 1977, Proceedings. Dordrecht, D. Reidel Publishing Co., 1978, p. 289-298, 15 refs.

In2O3(n plus)-Si(n) heterojunction solar cells have been obtained, with the oxide prepared by closed space vapor transport (CSVT) on Si single crystals. A major feature of the Sn-doped In2O3 thin films is their excellent transparency (greater than 85 percent) over the complete useful window of the substrate spectrum. A conversion efficiency of 11 percent was obtained for 2-sq-cm cells with open circuit voltages of approximately 500 mV and short circuit currents of approximately 32 mA/sq cm, with a fill factor of 0.65. B. J.

A78-52801 The MIS and MISIM solar cell. M. A. Green and R. B. Godfrey (New South Wales, University, Kensington, Australia). In Photovoltaic Solar Energy Conference, Luxembourg, September 27-30, 1977, Proceedings. Dordrecht, D. Reidel Publishing Co., 1978, p. 299-307, 10 refs. Research supported by the Australian Radio Research Board, Australian Research Grants Committee, and Sydney County Council.

The insertion of a very thin insulating layer (less than 20 Å) between the metal and the semiconductor of a Schottky solar cell can dramatically improve the open circuit voltage of the cell. The resulting MIS structure is shown to be electronically equivalent to a p-n junction device, provided that minority current flow is dominant. The MISIM solar cell, a new development, is also described, and it is shown that this structure is equivalent to the high-efficiency n(+)/pp(+) junction cell. B. J.

A78-52802 Schottky /MIS/ solar cells on ribbon silicon. A. E. Delahoy, W. A. Anderson, and J. K. Kim (Rutgers University, New Brunswick, N.J.). In Photovoltaic Solar Energy Conference, Luxembourg, September 27-30, 1977, Proceedings. Dordrecht, D. Reidel Publishing Co., 1978, p. 308-318, 9 refs. Research supported by Rutgers University and NSF.

Schottky MIS cells have been fabricated on single crystal silicon with an open-circuit voltage of 0.60 V and an AM1 conversion efficiency of 12%. This paper investigates the ribbon silicon (from Mobil-Tyco and IBM) used as the substrate. It is found that the degree of perfection of Tyco and IBM ribbon may influence the open circuit voltage of the finished cell. It is apparent that surface-state effects can influence the open circuit voltage and that this influence may be modified by surface treatment of the silicon prior to the formation of the Schottky barrier. B. J.

A78-52804 Comparison between the efficiencies of MIS and SIS solar cell structures. P. De Visschere and H. Pauwels (Gent, Rijksuniversiteit, Ghent, Belgium). In Photovoltaic Solar Energy Conference, Luxembourg, September 27-30, 1977, Proceedings. Dordrecht, D. Reidel Publishing Co., 1978, p. 330-339, 12 refs.

The paper analyzes the SIS solar cell structure, taking account of interface recombination and tunneling. Analytical results are

obtained and the efficiencies of various optimum structures are compared. It is found that the insulating layer is advantageous for heterojunction cells based on the collection of minority carriers excited in the weakly doped semiconductor, if the discontinuity in the energy band has the appropriate sign. The efficiency of the SIS cell can then be as high as that of a MIS or homojunction cell. B J

A78-52805 **A collection-velocity model for predicting efficiency of Schottky barrier solar cells.** P F Ordnung, A Adibi, D Heald, R Neville, and J Skalik (California, University, Santa Barbara, Calif.) In Photovoltaic Solar Energy Conference, Luxembourg, September 27-30, 1977, Proceedings. Dordrecht, D Reidel Publishing Co., 1978, p. 340-349.

A minority-carrier collection-velocity model is derived and applied to the problem of predicting the collected photogenerated minority current in a Schottky barrier solar cell. The model establishes that the collected current can be viewed as two superimposed but unrelated components: the photogeneration in the depletion region and that in the neutral region. For collection purposes the neutral region is represented as a region in which the diffusion equation applies and which is bounded at each end by a specific velocity-collection model. The collection velocity model at the ohmic end is the standard surface-recombination model. At the Schottky barrier end a collection-velocity model equivalent to the depletion region of the device is employed. Short-circuit currents predicted by this model are found to compare favorably with those numerically obtained by Fossum for a 0.1-micron-junction n-p cell. (Author)

A78-52806 **New model of conduction mechanisms in disordered and amorphous photovoltaic devices.** B Pistoulet, J L Robert, J M Dusseau, F Roche, P Girard, and L Ensuque (Montpellier II, Université, Montpellier, France) In Photovoltaic Solar Energy Conference, Luxembourg, September 27-30, 1977, Proceedings. Dordrecht, D Reidel Publishing Co., 1978, p. 350-358. 19 refs.

The paper develops a theoretical model which demonstrates the existence of medium range disorder: spatial fluctuations of impurity density - in amorphous and disordered semiconductors. These spatial fluctuations produce potential wells in which part of the carriers is localized when kT is smaller than the mean depth of the wells. The model can quantitatively explain the temperature dependence of drift mobility and conductivity of such semiconductors as amorphous silicon for use in solar cells. B J

A78-52807 **Design of a photovoltaic power-array with concentrated sunlight.** D Esteve, G Vialaret, K Achaïbou, and D Foillea (CNRS, Laboratoire d'Automatique et d'Analyse des Systèmes, Toulouse, France) In Photovoltaic Solar Energy Conference, Luxembourg, September 27-30, 1977, Proceedings. Dordrecht, D Reidel Publishing Co., 1978, p. 360-369.

A design procedure for solar arrays with sunlight concentration is elaborated on the basis of a morphological analysis which defines materials and structural constraints associated with the costs of installation. The procedure was applied to the design of a 1 kW prototype array which uses silicon solar cells with concentration levels exceeding 50. The array consists of a flat panel mounted on a two-axes controlled tracking heliostat made of sealed rigid modules which protect the solar cells. B J

A78-52808 **A solar cell system for concentrated sunlight.** G Yekutieli, A Brandstetter, B Haber, R Joulzary, E Kritchman, and J Mandelkorn (Weizmann Institute of Science, Rehovot, Israel) In Photovoltaic Solar Energy Conference, Luxembourg, September 27-30, 1977, Proceedings. Dordrecht, D Reidel Publishing Co., 1978, p. 370-376.

A test and evaluation facility for high-concentration solar cells and optical concentrators was constructed including a two-axis sun tracker and measuring instruments interfaced with a small computer. Silicon solar cells, Fresnel lenses, concentrating mirrors, and other elements of the system were evaluated in the facility. Using the

results of the study, a silicon solar cell and a Fresnel lens were chosen for a prototype solar cell system, designed to operate at 100 suns with approximately 10% efficiency. B J

A78-52809 **The solar eyeball - A self-powered self-steering photovoltaic generator.** D H Mash and P W Ross (Standard Telecommunication Laboratories, Ltd., Harlow, Essex, England) In Photovoltaic Solar Energy Conference, Luxembourg, September 27-30, 1977, Proceedings. Dordrecht, D Reidel Publishing Co., 1978, p. 377-385.

A description is presented of a solar-electric conversion module which uses a plastic Fresnel lens to concentrate sunlight onto a group of GaAs/GaAlAs solar cells. These cells have yielded 16-20% conversion efficiency and are expected to maintain this level at high intensities and temperatures involved. The ability to track the sun is achieved using a novel pneumatic system powered by solar energy. When the 'eyeball' is misaligned, the sun's image falls on a heat exchanger in one of the two air-reservoirs adjacent to the cells. The resulting expansion forces a magnetized piston against a fixed external magnetic field, causing the complete module to rotate until the solar cells are again in focus. B J

A78-52810 **Metal alkyl grown GaAs solar cells.** E Fabre, A Brière, and J P Andre (Laboratoires d'Electronique et de Physique Appliquée, Limeil-Brevannes, Val-de-Marne, France) In Photovoltaic Solar Energy Conference, Luxembourg, September 27-30, 1977, Proceedings. Dordrecht, D Reidel Publishing Co., 1978, p. 388-394. 12 refs. Research supported by the Délégation Générale à la Recherche Scientifique et Technique.

Gallium arsenide solar cells have been made using the metal-alkyl growth technique. A p-n homojunction within the GaAs is covered by a p-GaAlAs window layer in order to decrease the surface recombination velocity down to values as low as a few 1000 cm/s. The AM1 efficiency is close to 16 percent with the following characteristics: open-circuit voltage equals 895 mV, short circuit current equals 24 mA/sq cm, FF equals 0.74. (Author)

A78-52811 **Gallium arsenide solar cells for use with concentrated sunlight.** J W Burgess, R Davis, B T Debney, and R Nicklin (Plessey Co., Ltd., Allen Clark Research Centre, Towcester, Northants, England) In Photovoltaic Solar Energy Conference, Luxembourg, September 27-30, 1977, Proceedings. Dordrecht, D Reidel Publishing Co., 1978, p. 395-404. 12 refs. Research supported by the Commission of the European Communities.

Standard theoretical modeling techniques have been used to compare the performances of GaAs/Ga(1-x)Al(x)As solar cells with graded band gap and 'window' structures. It is shown that graded band gap structures can give a solar cell performance superior to the standard heterojunction cell when operating at high concentration ratios. The graded structures can be conveniently prepared by the metallo-organic chemical vapor deposition (MOCVD) process. A VPE reactor has been constructed for the preparation of large area devices. B J

A78-52812 **Preparation of Ga_{1-x}Al_xSb p-n homojunctions and study of the photovoltaic effect (Préparation d'homojonctions p-n à Ga_{1-x}Al_xSb et étude de l'effet photovoltaïque).** A Nguyen Van Mau, G Bougnot, H Y Muoy, and G M Moussalli (Montpellier II, Université, Montpellier, France) In Photovoltaic Solar Energy Conference, Luxembourg, September 27-30, 1977, Proceedings. Dordrecht, D Reidel Publishing Co., 1978, p. 405-414. 15 refs. In French.

Ga(1-x)Al(x)Sb layers have been obtained by vertical liquid-phase epitaxy. The junctions were prepared on tellurium-doped GaSb substrates. As a result, Ga_{1-x}Al_xSb(p)-Ga_{1-x}Al_x(n)-GaSb(n) structures were formed with junction depths of 5.20 microns, with x between 0.0 and 0.75. The dark I-V and C-V characteristics of the structure are presented and its photovoltaic characteristics are investigated. B J

A78-52813 Stabilization of the GaP/electrolyte photo-voltaic cell M J Madou, W P Gomes, and F Cardon (Gent, Rijksuniversiteit, Ghent, Belgium) In Photovoltaic Solar Energy Conference, Luxembourg, September 27-30, 1977, Proceedings Dordrecht, D Reidel Publishing Co, 1978, p 415-424 7 refs

Experimental results are presented on GaP/electrolyte solar cells. Flat-band potential, open circuit voltage, and dark open circuit voltage were measured as a function of pH (sulfate medium) for n-type GaP. Photocurrent was measured as a function of applied voltage and of time for n-GaP and anodic current density was measured as a function of pH. Open circuit photovoltage and dark rest potential are presented for different electrolyte compositions. It is shown that the Fe/CN_6^{4-} ion captures holes from the GaP anode, and that this competing hole reaction can prevent the anodic dissolution of the electrode, leading to the stabilization of the latter.

B J

A78-52814 Semiconductor-electrolyte solar cells - A new rechargeable redox solar battery W Gissler (Commission of the European Communities, Joint Research Centre, Ispra, Italy) and R Memming (Philips Forschungslaboratorium Hamburg GmbH, Hamburg, West Germany) In Photovoltaic Solar Energy Conference, Luxembourg, September 27-30, 1977, Proceedings

Dordrecht, D Reidel Publishing Co, 1978, p 425-435 31 refs

Semiconductor electrolyte electrodes can be used for solar energy conversion into electric and storable chemical energy. The working mechanism of regenerative and water photoelectrolysis cells is described and discussed. A new semiconductor-electrolyte cell is proposed in which solar energy is transformed into storable chemical energy using two different redox systems as in a rechargeable redox battery. First experimental results are reported. (Author)

A78-52815 A novel electrochemical solar cell J R Owen and W A Gerrard (Arya Mehr University of Technology, Teheran, Iran) In Photovoltaic Solar Energy Conference, Luxembourg, September 27-30, 1977, Proceedings Dordrecht, D Reidel Publishing Co, 1978, p 436-444 7 refs

A new low-temperature method for the preparation of cadmium selenide photoanodes is described. The method involves the electroplating of cadmium onto a steel plate and the subsequent conversion of cadmium to its selenide by corrosion in a hot solution of selenium in 5M KOH solution. Upon immersion of this photoanode into a sodium sulfide/polysulfide solution together with a suitable counter-electrode, a solar cell can be produced which has shown conversion efficiencies up to 1.7%.

B J

A78-52816 The photovoltaic project of the Commission of the European Communities W Palz (Commission of the European Communities, Brussels, Belgium) and R van Overstraeten (Leuven, Katholieke Universiteit, Heverlee, Belgium) In Photovoltaic Solar Energy Conference, Luxembourg, September 27-30, 1977, Proceedings Dordrecht, D Reidel Publishing Co, 1978, p 446-452

Attention is given to the first phase of the European Communities photovoltaic project. This phase includes studies on the improvement of solar cells, feasibility studies on new concepts and alternative cells, techniques for the fabrication of thin silicon and CdS sheets, the utilization of concentrators, and encapsulation and interconnection problems. Some of the aims of the second phase of the project are also discussed, including the improvement and automation of existing technology, and the development of prototype cells and plants.

B J

A78-52817 Current status of the US terrestrial photovoltaic conversion program L M Magid (US Department of Energy, Div of Solar Energy, Washington, D C) In Photovoltaic Solar Energy Conference, Luxembourg, September 27-30, 1977, Proceedings Dordrecht, D Reidel Publishing Co, 1978, p 453-465

The United States Energy Research and Development Administration (ERDA) is currently restructuring the Photovoltaic Program within the Division of Solar Energy. The desire is to (1) reorient the program to near-term goals and accomplishments, (2) increase the involvement of industry in the identification and selection of the right technology, experiments and systems, and (3) increase the activity in breakthrough (high-risk) research. The key assumption in undertaking this reorientation is that the market will enter an explosive self-sustaining growth phase at an array price of \$1 to \$2 per peak watt by 1980. The current status of the draft program being planned to achieve these objectives will be reviewed. (Author)

A78-52818 Photovoltaic conversion - French research and development activities (La conversion photovoltaïque - Activités françaises de recherche et développement) M Rodot and M Clavier (CNRS, Paris, France) In Photovoltaic Solar Energy Conference, Luxembourg, September 27-30, 1977, Proceedings Dordrecht, D Reidel Publishing Co, 1978, p 466-479 In French

The current status of the French photovoltaic conversion program is reviewed. Consideration is given to such technological developments as evaluations of photovoltaic systems and concentration systems, the development of amorphous silicon, and the characterization of thin polycrystalline silicon layers. Some results of research and development are discussed, including solar cells and panels manufactured by RTC, the realization of silicon contacts and junctions, cadmium telluride solar cells, layered semiconductor crystals, and solar pumps.

B J

A78-52819 Solar cell programme for India In Photovoltaic Solar Energy Conference, Luxembourg, September 27-30, 1977, Proceedings Dordrecht, D Reidel Publishing Co, 1978, p 480-492

Technical and economic factors associated with the development of solar-cell energy in India are discussed. Emphasis is placed on the use of solar cells in rural areas for purposes of water pumping for drinking and irrigation, and rural home electrification. Government policy with respect to the solar cell program is reviewed, and attention is given to projects undertaken under the aegis of this program, including conventional and high-concentration silicon solar cells, low-cost techniques, and GaAs, MIS, and heterojunction cells.

B J

A78-52820 Status of the West German terrestrial photovoltaic program H R Losch (Deutsche Forschungs- und Versuchsanstalt für Luft- und Raumfahrt, Bereich für Projekttragerschaften, Cologne, West Germany) In Photovoltaic Solar Energy Conference, Luxembourg, September 27-30, 1977, Proceedings

Dordrecht, D Reidel Publishing Co, 1978, p 493-500 23 refs

This paper gives a summary of the different activities on terrestrial photovoltaic developments in West Germany. Scientific details on most of the work performed can be found in several papers of this conference and in the numerous references listed. The overall objective is to develop low-cost reliable photovoltaic systems. Research, development and demonstration tests on photovoltaic systems were conducted. The work on silicon cells has been emphasized and led to novel, very promising cells made of polysilicon. Novel materials have been investigated to find out their feasibility of low-cost cells. A long time program is under discussion, but has not yet been approved. (Author)

A78-52821 Photovoltaics activity in Mexico E J Perez (Instituto Politecnico Nacional, Mexico City, Mexico) In Photovoltaic Solar Energy Conference, Luxembourg, September 27-30, 1977, Proceedings Dordrecht, D Reidel Publishing Co, 1978, p 501-510

The paper presents the historical background of the development of photovoltaic conversion in Mexico. Particular consideration is given to the development of photovoltaics at the Electrical Engineering and Physics Departments of the Study Center of the National Polytechnical University, and at the Materials Study Center at the National University. Economic factors are also considered. B J

A78-52822 Italian activities in the field of photovoltaic conversion S Pizzini (Montedison S.p.A., Novara, Italy) In Photovoltaic Solar Energy Conference, Luxembourg, September 27-30, 1977, Proceedings Dordrecht, D Reidel Publishing Co., 1978, p 511-514

A description of the major research activities in the field of photovoltaic conversion in Italy is given. Emphasis is placed on the structure of the national research program and the selection of the objectives, which assign a leading role to the conversion devices under concentrated sunlight (Author)

A78-52823 Photovoltaic system in 'Sunshine Project' national R & D program in Japan T Koyanagi (Ministry of International Trade and Industry, Electrotechnical Laboratory, Tokyo, Japan) In Photovoltaic Solar Energy Conference, Luxembourg, September 27-30, 1977, Proceedings Dordrecht, D Reidel Publishing Co., 1978, p 515-521

The purpose of R&D for the photovoltaic system in the Sunshine Project is to reduce the cost of the conversion system for terrestrial use by a factor of 100. This R&D is discussed with reference to silicon ribbon crystals, silicon thin film solar cells, new types of solar cells and arrays, solar cells using II-VI compound semiconductors, and fundamental research on solar cells. (Author)

A78-52824 Photovoltaic activities in the United Kingdom A A Dollery (Royal Aircraft Establishment, Farnborough, Hants., England) In Photovoltaic Solar Energy Conference, Luxembourg, September 27-30, 1977, Proceedings Dordrecht, D Reidel Publishing Co., 1978, p 522-531

Research and development aimed at reducing the cost and increasing the efficiency of solar cells, modules, arrays, and systems in the United Kingdom is reviewed. The cell types involved include crystalline and amorphous silicon, thin film and ceramic cadmium sulfide, cadmium sulfide/indium phosphide, gallium arsenide and Schottky barrier. Summary tables of these activities are provided.

B J

A78-52825 Progress in the development of high efficiency thin film cadmium sulfide solar cells A M Barnett, J D Meakin, A Rothwarf (Delaware, University, Newark, Del.) In Photovoltaic Solar Energy Conference, Luxembourg, September 27-30, 1977, Proceedings Dordrecht, D Reidel Publishing Co., 1978, p 535-546. 14 refs. NSF Grant No. AER-72-03478, Contract No. E(49-18)-2538

Thin film cadmium sulfide/copper sulfide solar cells have been developed and optimized for specific cell designs. The application of analytic techniques to specific cell designs is responsible for the improvements achieved to date, and it is expected to lead to a basic cadmium sulfide/copper sulfide cell with an efficiency exceeding 10%. It is also expected that the application of similar analytic techniques to a modified cell of cadmium-zinc sulfide/copper sulfide will lead to a conversion efficiency in direct sunlight of up to 14%.

B J

A78-52826 CdS-Cu₂S thin film solar cells for terrestrial applications. W. Arndt, G. Bilger, W. H. Bloss, G. H. Hewig, F. Pfisterer, and H. W. Schock (Stuttgart, Universität, Stuttgart, West Germany) In Photovoltaic Solar Energy Conference, Luxembourg, September 27-30, 1977, Proceedings Dordrecht, D Reidel Publishing Co., 1978, p 547-556. Bundesministerium für Forschung und Technologie Contract No. ET-4045.

CdS-Cu₂S thin film solar cells of size 7 x 7 sq cm have been investigated to optimize the processes of technology and to provide large scale terrestrial applications economically. The fabrication process of 30 micron CdS layer and 0.3 micron Cu₂S layer, the connection and integration of discrete cells in panels and the method of encapsulation are described. A series of accelerated tests of optimized front contact materials, with degradation due to irradiation and thermal cycling have been performed and field tests for a period of about one year of operation are reported. (Author)

A78-52827 On optimization of performance of a Cu₂S-CdS heterojunction solar cell through heat treatment S Deb (Jadavpur University, Calcutta, India) and H Saha (Chloride India, Ltd., Calcutta, India) In Photovoltaic Solar Energy Conference, Luxembourg, September 27-30, 1977, Proceedings Dordrecht, D Reidel Publishing Co., 1978, p 557-569. 10 refs.

A78-52828 Behaviour of deep centers in Cu₂S/CdS solar cells. J. Bernard and J. P. Vormus (Toulouse, Centre d'Études et de Recherches, Toulouse, France) In Photovoltaic Solar Energy Conference, Luxembourg, September 27-30, 1977, Proceedings Dordrecht, D Reidel Publishing Co., 1978, p 570-580. 16 refs. Délégation Générale à la Recherche Scientifique et Technique Contract No. 76-7-1487.

Results of photocapacitance studies of Cu₂S/CdS solar cells are presented. The deep centers of the cells were excited by monochromatic radiation at 0.4 and 1.1 micron in the 77-300 K temperature range. Particular consideration is given to the relaxation of optically excited deep centers. A phenomenological model is used to characterize the photovoltaic mechanisms observed in this heterostructure. The model takes account of tunneling in the photocurrent, thermal and optical cross sections of the deep centers, and photocarrier injection levels. B J

A78-52831 Spray preparation of cuprous sulfide layers J. Vedel, M. Soubeyrand, P. Cowache, and G. Leduc (Ecole Nationale Supérieure de Chimie, Paris, France) In Photovoltaic Solar Energy Conference, Luxembourg, September 27-30, 1977, Proceedings Dordrecht, D Reidel Publishing Co., 1978, p 601-607. 9 refs.

It is shown that CuCl-thiourea complexes may be prepared using acetonitrile as a solvent. The process thus avoids the side reactions produced when water is used as the solvent. The preparation is discussed noting comparative physical and chemical properties of both acetonitrile and water. Thermal decomposition is evaluated by a thermogravimetric analysis and the final products are identified by X-ray diffraction analysis. S C S

A78-52832 II-VI compound solar energy converters A. L. Fahrenbruch, J. Aranovich, F. Courrages, S. Y. Yin, and R. H. Bube (Stanford University, Stanford, Calif.) In Photovoltaic Solar Energy Conference, Luxembourg, September 27-30, 1977, Proceedings Dordrecht, D Reidel Publishing Co., 1978, p 608-617. 10 refs. ERDA-supported research.

Consideration is given to the design and performance of II-VI compound heterojunction solar converters which use p-CdTe as the absorber layers. It is shown that cells based on a p-CdTe absorber with CdS, ZnCdS, ITO, or ZnO windows offer efficiencies of at least 8%. Values are presented for a series of p-CdTe-based heterojunctions noting window bandgap, open-circuit voltage, and solar efficiency measured in simulated and natural sunlight. The photovoltaic properties of metal-oxide/CdTe junctions are discussed. S C S

A78-52836 Zn₃P₂ as a photovoltaic material A. Catalano, V. Dalal, E. A. Fagen, R. B. Hall, J. V. Masi, J. D. Meakin, G. Warfield, and A. M. Barnett (Delaware, University, Newark, Del.) In Photovoltaic Solar Energy Conference, Luxembourg, September 27-30, 1977, Proceedings Dordrecht, D Reidel Publishing Co., 1978, p 644-653. 7 refs. Contract No. E(49-18) 2460.

An examination is made of Zn₃P₂ as developed for low-cost, high-efficiency photovoltaic cells. Material preparation is outlined noting that single crystals up to 1 x 2 cm have been grown by vapor transport using the Bridgman technique. Consideration is given to defect chemistry with reference to electrical resistivity measured by the four point probe method, the influence of annealing, and hole concentration as a function of phosphorous equilibrium partial pressure. Based on X-ray diffraction analysis, the degree of preferential orientation was determined. Optical properties are outlined in terms of the interband absorption edge of Zn₃P₂ bulk monocrystals.

and room-temperature reflectivity. Consideration is given to the development of Zn₃P₂ photovoltaic cells and values are presented for the dark current-voltage characteristics of Mg Schottky contacts to single crystal Zn₃P₂. SCS

A78-52837 * **Real-time and accelerated outdoor endurance testing of solar cells** A F Forestieri and E Anagnostou (NASA, Lewis Research Center, Cleveland, Ohio) In Photovoltaic Solar Energy Conference, Luxembourg, September 27-30, 1977, Proceedings Dordrecht, D Reidel Publishing Co., 1978, p 656-676 6 refs ERDA-supported research

Materials for solar-cell module construction have been studied on the basis of limited real-time outdoor exposure evaluations. The materials tested included transmission samples, sub-modules, and actual solar cells. The results suggest that glass, fluorinated ethylene propylene, and perfluoroalkoxy are good materials for the covering or encapsulation of solar-cell modules. In all cases, dirt accumulation and cleanliness are important factors. SCS

A78-52838 **Terrestrial solar array experiments performed by Space Department, RAE Farnborough** M W Walkden and A A Dollery (Royal Aircraft Establishment, Farnborough, Hants, England) In Photovoltaic Solar Energy Conference, Luxembourg, September 27-30, 1977, Proceedings Dordrecht, D Reidel Publishing Co., 1978, p 677-684

Various studies of solar cells and arrays designed for terrestrial applications are reviewed. A study in Malta aimed at measuring array degradation, evaluating panel performance, and gathering insolation data is considered. A flashing xenon lamp navigation system is described. A radio navigation beacon system is discussed noting the power supplied by the solar array and auxiliary batteries. SCS

A78-52841 **Environmental and endurance tests for space application of low cost solar cells made of terrestrial silicon base material** H Bebermeier (Telefunken AG, Wedel, West Germany) and J C Larue (ESA, European Space Research and Technology Centre, Noordwijk, Netherlands) In Photovoltaic Solar Energy Conference, Luxembourg, September 27-30, 1977, Proceedings Dordrecht, D Reidel Publishing Co., 1978, p 710-719

In 1975 AEG-Telefunken began a research and development program in the field of terrestrial solar arrays. A non-single crystalline silicon base material has been introduced. This paper describes space environmental and endurance tests which have been performed with 2 x 2 and 5 x 5 sq cm terrestrial solar cells partly by AEG-Telefunken and partly by ESTEC. The tests show that non single crystalline solar cells (N SCS) developed for terrestrial application survive the environmental conditions for space application. (Author)

A78-52843 **Terrestrial photovoltaic performance measurement** F C Treble In Photovoltaic Solar Energy Conference, Luxembourg, September 27-30, 1977, Proceedings Dordrecht, D Reidel Publishing Co., 1978, p 732-744 8 refs

Procedures for measuring the performance of terrestrial photovoltaic cells are presented. Possible standards for rating solar spectral energy distribution and for selecting 28°C as a standard temperature for performance rating are noted. Procedures for measurements in natural and simulated (steady-state or pulsed) sunlight are given. The selection of cells for calibration as standards is described noting the NIP (Normal Incidence Pyrheliometer) and global methods. The development of solar simulators is considered in terms of total irradiance, spectral match, uniformity, temporal stability, and beam subtense angle. Instrumentation is briefly reviewed. SCS

A78-52844 * **U.S. terrestrial solar cell calibration and measurement procedures** H W Brandhorst, Jr (NASA, Lewis Research Center, Cleveland, Ohio) In Photovoltaic Solar Energy Conference, Luxembourg, September 27-30, 1977, Proceedings Dordrecht, D Reidel Publishing Co., 1978, p 745-753 10 refs ERDA-supported research

An outline is presented of changes in measurement procedures concerning solar cells. Outdoor measurements of cell performance based on pyranometer or pyrheliometer determination of intensity are discouraged. The absolute scale of irradiance is to be adopted as soon as possible. The standard atmosphere conditions are 1000 W/sq m irradiance, temperature 28°C, air mass 1.5, and precipitable water vapor content of 2 cm. The allowable light sources for solar simulation are short arc xenon lamps, pulsed xenon lamps, and dichroic filtered tungsten lamps. Key considerations in the design of a reference cell are considered and approaches for the matching of a reference cell to a test cell or modules are discussed. GR

A78-52846 **A pumping station powered by a photovoltaic converter in the Sahel (Une station de pompage alimentée par générateur photovoltaïque au Sahel)** B Keita, M Cadene, G W Cohen-Solal, and P Chartier (Dakar, Université, Dakar, Senegal) In Photovoltaic Solar Energy Conference, Luxembourg, September 27-30, 1977, Proceedings Dordrecht, D Reidel Publishing Co., 1978, p 770-778 8 refs In French

A water pumping station powered by photovoltaic converter is studied. The efficiency and reliability are analyzed. The effect of external parameters, solar declination, dust, temperature is studied. A more powerful station is proposed according to the experimental results. (Author)

A78-52847 **Optimization of a pumping station powered by a photovoltaic converter (Optimisation d'une station de pompage alimentée par générateur photovoltaïque)** M Barlaud and C Masselot (Dakar, Ecole Nationale Supérieure Universitaire de Technologie, Dakar, Senegal) In Photovoltaic Solar Energy Conference, Luxembourg, September 27-30, 1977, Proceedings Dordrecht, D Reidel Publishing Co., 1978, p 779-789 In French

The reported investigation has the objective to determine optimum operating conditions for a pumping station which is powered by a photovoltaic converter. It is found that an operation of the photovoltaic converter at constant voltage is required to obtain maximum power. In the investigation the voltage was automatically adjusted with the aid of a servochopper. Under the considered conditions, the motor which drives the water pump consumes a constant current at a variable voltage. The hydraulic energy obtained was more than twice the amount of energy obtained under comparable conditions in the case in which the photovoltaic converter was directly connected to the motor. GR

A78-52848 **Field tests of photovoltaic power systems.** M D Pope and R W Martin (MIT, Lexington, Mass.) In Photovoltaic Solar Energy Conference, Luxembourg, September 27-30, 1977, Proceedings Dordrecht, D Reidel Publishing Co., 1978, p 790-800 6 refs

The reported field tests were conducted to establish the technical credibility of solar photovoltaic (PV) energy systems and to identify and eliminate technical and institutional constraints to their widespread acceptance. The first step towards the realization of large scale agricultural systems utilizing photovoltaics was made during the summer of 1977 in connection with the construction and operation of a subscale experimental unit generating approximately 25 kW peak power. The photovoltaic array was used to drive a 7.5 kW pump that is interconnected with an automatic gated pipe irrigation system and a reservoir of 2500 cubic meter capacity. Attention is also given to photovoltaic applications in the U.S. National Park Service and photovoltaic power for a lighting system at a Chicago museum. GR

A78-52849 **New energies in telecommunications (Les énergies nouvelles dans les télécommunications).** R Colin In Photovoltaic Solar Energy Conference, Luxembourg, September 27-30, 1977, Proceedings Dordrecht, D Reidel Publishing Co., 1978, p 801-808 In French

A description is presented of a power station which was designed to supply electric energy to radio relays in remote locations. The station contains a solar battery and a wind-driven generator connected in parallel. A storage battery ensures continuity and regularity of output power. Power in the range from 100 to 400 watts can be supplied. Power supplies for devices installed along

highways for making emergency calls are also considered. Difficulties which arise in particular in developing countries with respect to the supply of batteries in the case of battery-operated devices, can be eliminated by making use of solar cells G R

A78-52850 Putting to use solar energy with silicon photovoltaic cells G J Naaijer (Laboratoires d'Electronique et de Physique Appliquée, Limeil-Brevannes, Val-de-Marne, France) In Photovoltaic Solar Energy Conference, Luxembourg, September 27-30, 1977, Proceedings Dordrecht, D Reidel Publishing Co., 1978, p 809-816

An approximately constant output voltage is required for an operation of photovoltaic cells or modules under optimum power transfer conditions. For most applications, the best approach for obtaining the desired operational conditions involves the employment of secondary batteries as an interface. This approach provides the constant voltage output characteristics needed and, in addition, makes day and night operation possible. A further advantage of such a buffer battery is related to the capability of the battery to deliver to the load an instantaneous power which can be much higher than the maximum photovoltaic generator output. Attention is given to a use of photovoltaic cells with a battery for pumping water, the employment of an adaptive switching system, a case in which a constant output current was needed, and approaches for decreasing the battery capacity which is needed G R

A78-52851 * The ERDA/LeRC Photovoltaic Systems Test Facility A F Forestieri (NASA, Lewis Research Center, Cleveland, Ohio) In Photovoltaic Solar Energy Conference, Luxembourg, September 27-30, 1977, Proceedings Dordrecht, D Reidel Publishing Co., 1978, p 817-824 5 refs ERDA supported research

The ERDA/LeRC Photovoltaic Systems Test Facility (STF) provides a vital support function to the overall ERDA National Solar Photovoltaic Program. It allows preliminary investigation and check out of components, subsystems, and complete photovoltaic systems before installation in actual service. The STF can also be used to determine optimum system configurations and operating modes. A facility description is presented, taking into account the solar cell array, the energy storage equipment, the power conditioning equipment, electric utility distribution network and loads, and instrumentation and data acquisition systems. Safety procedures which have been set up for maintenance and inspection of the solar array are discussed. Attention is also given to a number of investigations regarding the effect of environmental factors on solar cell array operation G R

A78-52852 The solar breeder J Lindmayer (Solarex Corp., Rockville, Md.) In Photovoltaic Solar Energy Conference, Luxembourg, September 27-30, 1977, Proceedings Dordrecht, D Reidel Publishing Co., 1978, p 825-835 5 refs

It was pointed out that a photovoltaic panel manufacturing plant can be made energy-independent by using energy derived from its own roof using its own panels. Such a plant becomes not only energy self-sufficient but a major supplier of new energy, hence the name solar breeder. The reported investigation establishes certain mathematical relationships for the solar breeder which clearly indicate that a vast amount of net energy is available from such a plant for the indefinite future. It is pointed out that if solar electric plants would be built according to the solar breeder principle, their operation as a net energy source would be automatically assured G R

A78-52853 * Candidate solar cell materials for photovoltaic conversion in a solar power satellite /SPS/ P E Glaser and D W Almgren (Arthur D Little, Inc., Cambridge, Mass.) In Photovoltaic Solar Energy Conference, Luxembourg, September 27-30, 1977, Proceedings Dordrecht, D Reidel Publishing Co., 1978, p 836-845 7 refs Contract No. NAS9-15294

In recognition of the obstacles to solar-generated baseload power on earth, proposals have been made to locate solar power satellites in geosynchronous earth orbit (GEO), where solar energy

would be available 24 hours a day during most of the time of the year. In an SPS, the electricity produced by solar energy conversion will be fed to microwave generators forming part of a planar phase-array transmitting antenna. The antenna is designed to precisely direct a microwave beam of very low intensity to one or more receiving antennas at desired locations on earth. At the receiving antenna, the microwave energy will be safely and efficiently reconverted to electricity and then be transmitted to consumers. An SPS system will include a number of satellites in GEO. Attention is given to the photovoltaic option for solar energy conversion in GEO, solar cell requirements, the availability of materials, the implication of large production volumes, requirements for high-volume manufacture of solar cell arrays, and the effects of concentration ratio on solar cell array area G R

A78-52854 Solarelectric power supply for a television transmitter in Western Germany H K Kothe (VARTA Batterie AG, Kelkheim, West Germany) In Photovoltaic Solar Energy Conference, Luxembourg, September 27-30, 1977, Proceedings Dordrecht, D Reidel Publishing Co., 1978, p 846-850

In order to reduce the costs of the installation for small television transmitters the broadcasting company 'Sudwestfunk' performs a five years service test with a solar powered 25 Watt transmitter in the mountains of the Eifel. The layout involved the problem of minimizing the costs of solar generator and battery and having sufficient safety for continuous supply in spite of the considerable annual variations in solar energy. The method for solving this problem developed by the author is described (Author)

A78-52862 Indium tin oxide/silicon solar cells J R Sites and J B DuBow (Colorado State University, Fort Collins, Colo.) In Photovoltaic Solar Energy Conference, Luxembourg, September 27-30, 1977, Proceedings Dordrecht, D Reidel Publishing Co., 1978, p 930-936 8 refs Contract No. E(04-3)-1203

Twelve percent efficient solar cells consisting of indium tin oxide on single crystal silicon have been fabricated and characterized. Study of the interface indicates the existence of a silicon dioxide layer. A theoretical model which fits experimental observations is that of a tunnel semiconductor-insulator-semiconductor diode. Detailed electrical measurements indicate that the solar cell performance approximates that of diffused p-n junction solar cells. Economic models and studies of indium supply indicate that an economically viable ITO terrestrial photovoltaic conversion technology is possible (Author)

A78-52865 Silicon double solar cell I Chambouleyron and Y Chevalier In Photovoltaic Solar Energy Conference, Luxembourg, September 27-30, 1977, Proceedings Dordrecht, D Reidel Publishing Co., 1978, p 967-976 10 refs Research supported by the Organization of American States

The silicon double cell consists of a p-type material sandwiched between two identical n(+)-type diffused regions. The cell is analyzed for two different irradiation conditions: (1) irradiation of one of the diffused surfaces, and (2) irradiation of both sides of the cell. The various mechanisms involved in the photoresponse are discussed, and design criteria for the double cell are analyzed as a function of material characteristics B J

A78-52866 Getting more power out of silicon. Y Chevalier and I Chambouleyron In Photovoltaic Solar Energy Conference, Luxembourg, September 27-30, 1977, Proceedings Dordrecht, D Reidel Publishing Co., 1978, p 977-986 Research supported by the Organization of American States

A study was conducted to investigate the possibility of obtaining more power from silicon solar cell wafers without increasing the complexity of cell manufacturing. Two such possibilities were studied: (1) the simultaneous illumination of both faces of a classical cell, and (2) the use of twin cells. A nonconventional solar

cell has been investigated which may yield twice the power obtained from a conventional cell on the same silicon wafer B J

A78-52867 **Solar cell sheet resistance analysis** I Cham-bouleyron In Photovoltaic Solar Energy Conference, Luxembourg, September 27-30, 1977, Proceedings Dordrecht, D Reidel Publishing Co, 1978, p 987-995 Research supported by the Organization of American States

In this paper a theoretical analysis is carried out on the influence of collecting grid patterns in solar cell sheet resistance Several conventional grids are studied in different cell geometries Numerical calculations are presented as well as expressions giving the sheet resistance as a function of collecting finger density and diffused layer characteristics A graphical representation of the results is given in a single figure which allows a rapid determination of the appropriate geometry and the finger density corresponding to a specified sheet resistance These results are compared with previous calculations

(Author)

A78-52868 **Thermal modeling of solar cells operating under concentrated sunlight** B Hachem (Liège, Université, Liège, Belgium) and R Mertens (Leuven, Katholieke Universiteit, Louvain, Belgium) In Photovoltaic Solar Energy Conference, Luxembourg, September 27-30, 1977, Proceedings Dordrecht, D Reidel Publishing Co, 1978, p 996-1003 10 refs Research supported by the Nationaal Fonds voor Wetenschappelijk Onderzoek

The paper develops a rather rigorous model to calculate the temperature field in a photovoltaic system, operating under concentrated sunlight General equations describing energy conservation in the cell and governing its temperature field are obtained The equations depend on effective concentration, efficiency, and the optical, thermal, and geometrical properties of the cell The model is applied to two particular systems those with passive fin-cooling and those with active cooling B J

A78-52869 **Non-linear analysis of solar-cells-series resistance** S Bobbio, F P Califano (Napoli, Università, Naples, Italy), and E Ciccione (Olivetti Controllo Numerico S p A, San Bernardo d'Ivrea, Italy) In Photovoltaic Solar Energy Conference, Luxembourg, September 27-30, 1977, Proceedings Dordrecht, D Reidel Publishing Co, 1978, p 1006-1018 Research supported by the Consiglio Nazionale delle Ricerche

Both one- and two-dimensional models are used in a nonlinear analysis of the series resistance of solar cells Consideration is also given to the effects of series resistance on the fill factor and on the equivalent circuit of the cell The results are used to examine a variety of cases illustrating the behavior of solar cells at high levels of illumination It is found that an overly high finger-spacing reduces cell performance B J

A78-52870 **On the improvement of Schottky solar cells** A H M Shousha (Cairo University, Cairo, Egypt) In Photovoltaic Solar Energy Conference, Luxembourg, September 27-30, 1977, Proceedings Dordrecht, D Reidel Publishing Co, 1978, p 1019-1026 8 refs

Simplified expressions which relate conversion efficiency to cell parameters are derived for Schottky barrier solar cells Barrier height and the q-factor are studied as a function of cell parameters It is shown that increasing the potential barrier height increases the open circuit voltage as well as the fill factor, on the other hand, increasing the q-factor increases the open circuit voltage, but has no appreciable effect on the fill factor B J

A78-52871 **Transition region recombination in solar cells** J R Mallinson and P T Landsberg (Southampton, University, Southampton, England) In Photovoltaic Solar Energy Conference, Luxembourg, September 27-30, 1977, Proceedings Dordrecht, D Reidel Publishing Co, 1978, p 1027-1032 7 refs

The paper develops a theoretical model which shows that the effect of recombination current density in the transition region is significant in a typical silicon n-on-p homojunction solar cell This

effect appears to become less important with increasing concentration of solar radiation for concentration values in the range 1-100 The present theory becomes less reliable for larger concentration values Shockley-Read type recombination tends to predominate over Auger effects and band-band recombination B J

A78-52872 **Indirect gap semiconductors for photovoltaic solar energy conversion** C Vérie, M Leroux (CNRS, Laboratoire de Physique du Solide, Meudon, Hauts-de-Seine, France), A Tromson, and P Gibart (CNRS, Laboratoire de Magnétisme, Meudon, Hauts-de-Seine, France) In Photovoltaic Solar Energy Conference, Luxembourg, September 27-30, 1977, Proceedings Dordrecht, D Reidel Publishing Co, 1978, p 1033-1043 15 refs Delegation Generale a la Recherche Scientifique et Technique Contract No 76-7-1500

The paper considers the possibility of utilizing the direct-indirect gap transition of certain ternary III A-V A alloys for the purpose of high-efficiency photovoltaic solar energy conversion The importance of the $Al(1-x)In(x)Sb$ and $Al(1-x)In(x)As$ alloys in this connection is discussed The thermodynamics of the chemical vapor deposition of these two types of alloys is examined in detail B J

A78-52874 **SARA - Concentration solar array with reflector-radiations** W D Ebeling, D Rex (Braunschweig, Technische Hochschule, Braunschweig, West Germany), J Gulpen, and E. Hornung (ERNO - Raumfahrttechnik GmbH, Bremen, West Germany) In Photovoltaic Solar Energy Conference, Luxembourg, September 27-30, 1977, Proceedings Dordrecht, D Reidel Publishing Co, 1978, p 1056-1070

The feasibility of a new design for space solar generators is investigated, which uses cylinder-parabolic reflector-radiators to concentrate solar radiation on to solar cells and to radiate the thermal energy off the solar cells The reflector-radiators are thermally optimized and their mechanical stability is investigated A carbon fiber reinforced plastic (CFRP) frame which holds the CFRP reflectors is designed The calculations show that this panel has a mass to power ratio lower than any known nonconcentrating light weight panel and that only one third of the solar cells is needed Technological results on manufacturing of thin parabolic CFRP reflectors, application of specular surfaces and CFRP thermal conductivity are reported (Author)

A78-52875 **Linear Fresnel lenses and their use in photovoltaic generators** B Hachem (Liège, Université, Liège, Belgium) and R Mertens (Leuven, Katholieke Universiteit, Louvain, Belgium) In Photovoltaic Solar Energy Conference, Luxembourg, September 27-30, 1977, Proceedings Dordrecht, D Reidel Publishing Co, 1978, p 1071-1079 9 refs Research supported by the Nationaal Fonds voor Wetenschappelijk Onderzoek

An analytical method is proposed for computed-assisted calculation of the collection efficiency of concentrator systems based on linear Fresnel lenses and operating in a quasi-static mode The method allows calculation of the collection efficiency throughout the year for all orientations (as long as the axis is east-west oriented) and all locations Attention is given to the analytical simulation of a system consisting of a linear Fresnel lens mounted on a V trough, thereby reducing the necessary cell area and causing a more uniform illumination of the cells S D

A78-52879 **The influence of the composition of the solution on GaAs-electrolyte photovoltaic cell characteristics** R L Van Meirhaeghe, F Cardon, and W P Gomes (Gent, Rijksuniversiteit, Ghent, Belgium) In Photovoltaic Solar Energy Conference, Luxembourg, September 27-30, 1977, Proceedings Dordrecht, D Reidel Publishing Co, 1978, p 1109-1118 9 refs

A78-52881 **Dry barrier formation of Cu₂S-CdS junctions** A N Casper and R Hill (Newcastle-upon-Tyne Polytechnic, Newcastle-upon-Tyne, England) In Photovoltaic Solar Energy Con-

ference, Luxembourg, September 27-30, 1977, Proceedings
Dordrecht, D Reidel Publishing Co., 1978, p
1131-1140 12 refs

Chemical and physical processes that take place during dry-barrier formation of a Cu₂S-CdS junction are studied. Emphasis is placed on preparation techniques which bring about a significant improvement in the power conversion efficiency of the solar cell produced. The thickness of the Cu₂S layer is about equal to the theoretical optimum when a silver back-surface contact is used. Improvements in efficiency are expected when silver-coated glass is used as the substrate in place of molybdenum. Further improvements in efficiency might result if the cells were encapsulated, because of improved optical matching and reductions in the outer surface recombination rate. S D

A78-52885 Cuprous oxide as a photovoltaic converter. C Noguet, M Tapiero, C Schwab, J P Zielinger (Strasbourg I, Université, Strasbourg, France), D Trivich, R J Komp, E Y Wang, and K Weng (Wayne State University, Detroit, Mich). In Photovoltaic Solar Energy Conference, Luxembourg, September 27-30, 1977, Proceedings. Dordrecht, D Reidel Publishing Co., 1978, p 1170-1179 10 refs

Cuprous oxide is an attractive material for large scale use in photovoltaic cells for terrestrial solar energy conversion because of a series of characteristics. Semi-empirical calculations indicate that a conversion efficiency of up to 12 percent is possible in principle, nevertheless the practical conversion is still limited to approximately 1 percent whatever the methods developed for making the junctions. Therefore a study of the physical parameters of importance such as barrier height, diffusion length of minority carrier and spectral response has been undertaken on several types of junctions. (Author)

A78-52887 A new approach for developing solar photovoltaic cells (Nouvelle approche de réalisation de cellules photovoltaïques solaires). X Gerbaux, A Hadni, and R Thomas (Nancy I, Université, Nancy, France). In Photovoltaic Solar Energy Conference, Luxembourg, September 27-30, 1977, Proceedings. Dordrecht, D Reidel Publishing Co., 1978, p 1186-1191 6 refs. In French

The study demonstrates the effectiveness of the method of epitaxial growth in submicroscopic holes (EGSH) in obtaining thin single crystal films deposited by evaporation of triglycine sulfate (liquid and vapor phases). The EGSH method is used to fabricate a quasi-single-crystal film of tellurium having a thickness of 3.15 microns and an area of 5 x 8 sq mm. The single-crystal state is assessed by observation of IR birefringence. Striking advantages of the EGSH method are low-cost production of evaporated films and high photoelectric efficiency of single crystals. S D

A78-52889 * Method for minimizing the cost/Watt of complete photovoltaic systems and applications. D Redfield (RCA Laboratories, Princeton, N.J.). In Photovoltaic Solar Energy Conference, Luxembourg, September 27-30, 1977, Proceedings. Dordrecht, D Reidel Publishing Co., 1978, p 1202-1210 ERDA-NASA-sponsored research

The paper describes an optimization method and some applications in which the design criterion for every part of a photovoltaic system is the minimum power cost for the complete system. The various parts of a photovoltaic system are grouped so that all costs fall into four classes: fabrication steps of the active solar cells, steps associated with the collector array and its complete structure, power-handling elements such as switchgear, storage, etc., and fixed costs that do not vary directly with any of the system parts, such as factory-level overhead. It is assumed that the total collector area is independent of any of the optimization processes. A general equation is found to be capable of optimizing all parts of a system, although the cell and array steps are basically different from the power-handling elements. It is shown that the optimization of any step in the system requires inclusion of the properties of the other parts of the system. S D

A78-52890 Calculations and in situ experimental data on a water pumping system directly connected to an 1/2 Kw photovoltaic converters array. J A Roger, A Perez, D Campana, A Castiel, and C H S Dupuy (Lyon I, Université, Lyons, France). In Photovoltaic Solar Energy Conference, Luxembourg, September 27-30, 1977, Proceedings. Dordrecht, D Reidel Publishing Co., 1978, p 1211-1220 5 refs

A78-52891 Water pumping system using solar power from photovoltaic source. R Prido (Centre National d'Etudes Spatiales, Paris, France). In Photovoltaic Solar Energy Conference, Luxembourg, September 27-30, 1977, Proceedings. Dordrecht, D Reidel Publishing Co., 1978, p 1221-1228

Various configurations of solar pumping systems are studied, including (1) batteryless systems, (2) systems with a sun-tracking solar generator, (3) systems using solar generators with variable characteristics, and (4) systems using electronic impedance matchers. Combinations of these configurations are also studied. Experimental results are presented along with photographs of some of the configurations. B J

A78-52892 Solar-cell power supplies for radio communication and TV broadcasting equipment (Générateurs solaires pour l'alimentation des équipements de radiodiffusion et de télévision). S Polgar (TéléDiffusion de France, Montrouge, Hauts-de-Seine, France). In Photovoltaic Solar Energy Conference, Luxembourg, September 27-30, 1977, Proceedings. Dordrecht, D Reidel Publishing Co., 1978, p 1229-1242. In French

The use of solar arrays to power microwave links and TV translators and receivers in areas remote from electric utilities is considered. Installations with a peak power of 30 W for supplying TV sets in Africa are described, and specifications for the technical checkout of these installations are discussed. Consideration is also given to rapid calculation methods for sizing such installations, the computer analysis of solar cell characteristics, and the prospects for the increased use of solar arrays for powering TV systems. B J

A78-52893 dc motor characteristics from solar cell supply. J Appelbaum and J Bany (Tel Aviv University, Tel Aviv, Israel). In Photovoltaic Solar Energy Conference, Luxembourg, September 27-30, 1977, Proceedings. Dordrecht, D Reidel Publishing Co., 1978, p 1243-1252

Theoretical and experimental results are presented on the performance of three types of solar cell powered dc motors: separate-excitation, series, and shunt. The torque-current and torque-speed characteristics are plotted as a function of irradiation levels. The motor starts at some irradiation level which is determined by the mechanical load, and the speed varies with load characteristics and irradiation. B J

A78-52894 The effect of temperature within the encapsulation on charging current of solar silicon electric generator. D G S Chuah, S K Tan, C K Koh, R Ratnalingam, C Singh, and M J Basha b Adlan (University of Sciences, Penang, Federation of Malaysia). In Photovoltaic Solar Energy Conference, Luxembourg, September 27-30, 1977, Proceedings. Dordrecht, D Reidel Publishing Co., 1978, p 1253-1260

The response of a 7.2 watt silicon solar electric generator to local atmospheric condition with respect to the cell temperature showed that the charging current deteriorated as the cell temperature approached the maximum operating temperature. A control experiment of two similar units of arrays of silicon solar cells, in which one unit was cooled and the other was not cooled, indicated that the charging current for cells without cooling was less than that for cells which were cooled. (Author)

A78-52895 Reliability simulation of a large solar battery. A Bogomolny, I Gertsbakh, and M Slonim (Negev, University, Beersheba, Israel). In Photovoltaic Solar Energy Conference,

Bhavaraju (Public Service Electric and Gas Co., Newark, N.J.) (*Institute of Electrical and Electronics Engineers, Winter Meeting, New York, N.Y., Jan 29-Feb 3, 1978*) *IEEE Transactions on Power Apparatus and Systems*, vol PAS-97, Sept-Oct 1978, p 1805-1813

This paper evaluates the long range economic benefits of first generation and advanced fuel cells in the future generation capacity plans of a representative electric utility system. The economic benefits of fuel cells' unique characteristics are separately quantified and the relationships between market penetration, fuel price, and capital cost are analyzed. Reliability, production cost, and optimum generation mix methods commonly used for generation planning in utilities were used for this study. The results indicate that the first generation fuel cells are attractive for intermediate duty and second generation for both intermediate and base load duty if the projected goals of capital cost and heat rate can be met (Author)

A78-53248 Raw tidal energy absorption capability of a power system. G B Furst and S Sud (Tidal Power Consultants, Ltd., Montreal, Canada) (*Institute of Electrical and Electronics Engineers, Summer Meeting, Mexico City, Mexico, July 17-22, 1977*) *IEEE Transactions on Power Apparatus and Systems*, vol PAS-97, Sept-Oct 1978, p 1910-1915, Discussion, p 1916, 1917 5 refs

This paper presents a new and efficient semiprobabilistic method developed during the Bay of Fundy studies, to determine the raw tidal energy absorption capability of a power system. This method uses the annual load and tidal duration shapes, but does not require the hourly simulation of system load and tidal generation. The power system constraints on raw tidal energy absorption and the concept of 'must-run' generation together with the modification of the annual load duration curve are also discussed (Author)

A78-53326 Solid state chemistry of energy conversion and storage, *Proceedings of the Symposium, New York, N.Y., April 5-8, 1976*. Symposium sponsored by the American Chemical Society. Edited by J B Goodenough (Oxford University, Oxford, England) and M S Whittingham (Exxon Research and Engineering Co., Linden, N.J.) Washington, D.C., American Chemical Society (Advances in Chemistry Series, No 163), 1977 380 p \$38 50

Hydrogen as an energy carrier is considered along with the catalytic synthesis of hydrocarbons from carbon monoxide and hydrogen, the photoelectrochemical production of hydrogen, the conversion of visible light to electrical energy, solar energy conversion through photosynthesis, photovoltaic solar cells, the recrystallization of semiconducting polycrystalline ribbons using the Peltier effect, wavelength-selective surfaces, thermodynamic studies of some electrode materials, and new solid electrolytes. Attention is given to the sodium-sulfur battery, the chemistry of hot corrosion, non-stoichiometry and disorder in fluorite-related materials for energy conversion, properties relating to the application of solid metal hydrides in solar heating and cooling, the storage of hydrogen isotopes in intermetallic compounds, chemical conversion using sheet-silicate intercalates, and material problems with respect to high temperature electrolysis/fuel cells G R

A78-53327 Hydrogen as an energy carrier - A European perspective of the problem. P Hagenmuller (Bordeaux I, Université, Talence, Gironde, France) In *Solid state chemistry of energy conversion and storage, Proceedings of the Symposium, New York, N.Y., April 5-8, 1976* Washington, D.C., American Chemical Society, 1977, p 1-14 13 refs

The production of low-cost hydrogen may be useful both as energy storage method for nuclear electric-power plants and as feedstock for the chemical energy. In the medium-to-long term, two methods of producing hydrogen more efficiently from nuclear power can be envisioned. These methods are based on electrolysis at medium or high temperature and the thermal decomposition of water with the aid of thermochemical cycles. Both methods use water as raw material. Methods for increasing the efficiency of water

electrolysis are considered along with suitable cycles for the decomposition of water by means of a thermochemical approach. Attention is given to the transport of hydrogen in pipes, the storage of hydrogen in underground cavities, hydrogen storage in the form of hydrides, and safety problems G R

A78-53328 Catalytic synthesis of hydrocarbons from carbon monoxide and hydrogen. M A Vannice (Exxon Research and Engineering Corporate Research Laboratories, Linden, N.J.) In *Solid state chemistry of energy conversion and storage, Proceedings of the Symposium, New York, N.Y., April 5-8, 1976* Washington, D.C., American Chemical Society, 1977, p 15-32 25 refs

Knowledge of the catalytic behavior of the Group VIII metals is an important step toward the achievement of the goal of controlling product selectivity in CO-H₂ reactions. A short review of existing synthesis processes provides a description of the state of the art in CO-H₂ catalysis. Recent research using well-characterized, supported metal catalysts is presented, and the significance of the results is discussed. Attention is given to complicating reactions in CO hydrogenation, the uniqueness of ruthenium with respect to the production of high molecular weight paraffinic waxes, supported metal catalysts, the methanation kinetics over alumina-supported metals, and metal crystallite size effects and metal support interactions G R

A78-53329 Photoelectrochemical production of hydrogen. J O Bockris and K Uosaki (South Australia, Flinders University, Bedford Park, Australia) In *Solid state chemistry of energy conversion and storage, Proceedings of the Symposium, New York, N.Y., April 5-8, 1976* Washington, D.C., American Chemical Society, 1977, p 33-70 91 refs

An efficient process for the photoelectrochemical production of hydrogen would contribute significantly to the solution of the problems of future energy requirements. Gerischer has pointed out that in principle all p- and n type semiconductors can be used for a photocell electrode when a suitable reversible redox system is found which induces the formation of a depletion of a space charge layer. The theory of hydrogen production in a photoelectrochemical cell is considered along with the photochemical reaction on a TiO₂ single crystal, the photoelectrochemical reactions on metal titanates, and the prevention of anodic dissolution of a photon absorber by TiO₂ coatings G R

A78-53330 * Conversion of visible light to electrical energy - Stable cadmium selenide photoelectrodes in aqueous electrolytes. M S Wrighton, A B Ellis, and S W Kaiser (MIT, Cambridge, Mass.) In *Solid state chemistry of energy conversion and storage, Proceedings of the Symposium, New York, N.Y., April 5-8, 1976* Washington, D.C., American Chemical Society, 1977, p 71-92 65 refs NASA-supported research

Stabilization of n-type CdSe to photoanodic dissolution is reported. The stabilization is accomplished by the competitive oxidation of S(-) or S(n)(-) at the CdSe photoanode in an electrochemical cell. Such stabilized cells are shown to sustain the conversion of low energy (not less than 1.7 eV) visible light to electricity with good efficiency and no deterioration of the CdSe photoelectrode or of the electrolyte. The electrolyte undergoes no net chemical change because the oxidation occurring at the photoelectrode is reversed at the cathode. Conversion of monochromatic light at 633 nm to electricity is shown to be up to approximately 9% efficient with output potentials of approximately 0.4 V. Conversion of solar energy to electricity is estimated to be approximately 2% efficient (Author)

A78-53331 Solar energy conversion through photo-synthesis. R K. Clayton (Cornell University, Ithaca, N.Y.) In *Solid state chemistry of energy conversion and storage, Proceedings of the Symposium, New York, N.Y., April 5-8, 1976* Washington, D.C., American Chemical Society, 1977, p 93-108 36 refs

Energy sources of possible quantitative significance which are directly or indirectly of contemporary solar origin are considered, taking into account wind-powered electric generators, ocean thermal gradients, direct solar heating, variations of agriculture, photo-synthetic hydrogen production, and photoelectric devices. The most practical schemes for capturing solar energy appear at this time to be directly heating and harnessing the wind. Silicon photovoltaic cells could contend with these if a means were discovered for reducing their cost sharply. The conversion of organic waste, plants, and algae into fuel has immediate practicality, but on a limited scale relative to the total needs. In comparison with these approaches, the schemes for using photosynthetic tissues in special ways seem highly visionary. However, it is recommended to press forward on all fronts until one or more working systems are established and proven. G. R.

A78-53332 Photovoltaic solar cells. S. Wagner (Bell Telephone Laboratories, Inc., Holmdel, N.J.) In *Solid state chemistry of energy conversion and storage*; Proceedings of the Symposium, New York, N.Y., April 5-8, 1976. Washington, D.C., American Chemical Society, 1977, p. 109-133. 63 refs.

Attention is given to the properties of semiconductor cells which make them suitable for photovoltaic cells, the operation of diodes as solar cells, the photovoltage, the optimum band gap, the direct and indirect band gap, the photocurrent, heterodiodes and Schottky barrier diodes, and approaches for reducing the cost of solar cells. While much progress has been made in analyzing and improving the performance of solar cells, it is not yet possible to predict materials and processes for inexpensive converters. The present situation calls for an increase in the number of available options and for the development of new production techniques, both with a substantial input from chemists. G. R.

A78-53333 Recrystallization of semiconducting polycrystalline ribbons using the Peltier effect. S. Vojdani and R. Hashemian (Arya Mehr University of Technology, Teheran, Iran). In *Solid state chemistry of energy conversion and storage*; Proceedings of the Symposium, New York, N.Y., April 5-8, 1976. Washington, D.C., American Chemical Society, 1977, p. 134-148. 9 refs.

A new approach to zone refining thin semiconductor ribbons or films necessary for the production of low-cost solar cells is investigated using the Peltier effect. The results indicate that under certain conditions the Peltier current tends to stabilize the freezing interface allowing an increase in the grain size of a thin film. (Author)

A78-53334 Wavelength-selective surfaces. J. C. C. Fan (MIT, Lexington, Mass.) In *Solid state chemistry of energy conversion and storage*; Proceedings of the Symposium, New York, N.Y., April 5-8, 1976. Washington, D.C., American Chemical Society, 1977, p. 149-164. 10 refs. USAF-sponsored research.

Wavelength-selective surfaces have important applications in solar-energy collection and energy conservation. Both transparent heat mirrors and selective-black absorbers present challenging material requirements. Although several wavelength-selective films have been developed, materials research in this area continues to be of interest. Attention is given to the mechanisms of heat loss in a flat-plate collector, transparent heat mirrors, an estimate of savings with heat mirrors on domestic windows, and selective-black absorbers. It has been found that MgO/Au cermet films deposited by rf sputtering on metallic substrates are excellent selective-black absorbers. G. R.

A78-53335 Thermodynamic studies of some electrode materials. P. G. Dickens (Oxford University, Oxford, England). In *Solid state chemistry of energy conversion and storage*; Proceedings of the Symposium, New York, N.Y., April 5-8, 1976. Washington, D.C., American Chemical Society, 1977, p. 165-178. 19 refs.

The thermochemistry of a class of ternary oxide phases, the 'oxide bronzes,' $A(x)MO(n)$ is investigated. In this formulation

$MO(n)$ is the highest oxide of a transition metal $M = W, Mo, \text{ or } V$, A is some other electropositive inclusion element such as $Na, K, \text{ or } H$, and x is a variable in the range from 0 to 1. The materials chosen for study are chemically inert towards nonoxidizing acid media and are good electronic conductors, some have previously been examined as potential fuel cell electrodes. Enthalpies of formation of a range of tungsten, molybdenum, and vanadium oxide bronzes are determined. The thermodynamic stability of these materials towards oxidation and disproportionation is examined, and their electrochemical characteristics are discussed. (Author)

A78-53336 New solid electrolytes. H. Y.-P. Hong (MIT, Lexington, Mass.) In *Solid state chemistry of energy conversion and storage*; Proceedings of the Symposium, New York, N.Y., April 5-8, 1976. Washington, D.C., American Chemical Society, 1977, p. 179-194. 13 refs. DARPA-NSF-sponsored research.

Solid electrolytes for fast alkali-ion transport are under investigation for possible use in high-specific-energy secondary batteries, electrolytic cells for extracting metals from molten salts, and thermoelectric generation. A summary is presented of the results of studies which have led to the synthesis of a number of new alkali-ion solid electrolytes. One of these materials is comparable in $Na(+)$ -ion conductivity at 300°C to beta-double-prime alumina, which is presently the leading candidate for use in Na-S high-specific-energy batteries, and another has the highest $K(+)$ ion conductivity so far reported. A description is provided of the crystallographic principles relating to alkali-ion transport that have evolved during the studies. The new materials developed are discussed individually. G. R.

A78-53337 Polarizability enhancement of ionic conductivity for $A(+)$ in $A(+)/M2X6$ series. A. W. Sleight, J. E. Guiley, and T. Berzins (Du Pont de Nemours and Co., Inc., Wilmington, Del.) In *Solid state chemistry of energy conversion and storage*; Proceedings of the Symposium, New York, N.Y., April 5-8, 1976. Washington, D.C., American Chemical Society, 1977, p. 195-204. 43 refs.

The ionic conductivity of $A(+)$ is studied in the isostructural series of the general formula $A(+)/M2X6$ where $A(+)$ is $Rb, Cs, \text{ or } Tl$, M is $Ta, Nb, \text{ or } W$, and X is $O \text{ or } F$. High polarizability of either $A(+)$ or the $(M2X6)(-)$ framework enhances the ionic mobility of $A(+)$. Thus although $Tl(+)$ is essentially the same size as $Rb(+)$, the mobility of $Tl(+)$ is much higher in a given $(M2X6)(-)$ framework. This is attributed to the higher polarizability of $Tl(+)$. The polarizability of the $(M2X6)(-)$ framework is related to the polarizability of $M-X$ bonds. The influence of polarizability in beta-alumina and anion conductors is also discussed. (Author)

A78-53338 The sodium-sulfur battery - Problems and promises. S. A. Weiner (Ford Motor Co., Dearborn, Mich.) In *Solid state chemistry of energy conversion and storage*; Proceedings of the Symposium, New York, N.Y., April 5-8, 1976. Washington, D.C., American Chemical Society, 1977, p. 205-224. NSF Grant No. C-805.

The sodium-sulfur battery consists of two liquid electrodes, sodium and sulfur, and a ceramic electrolyte membrane allowing the transport of sodium ions. The sodium electrode does not present material problems. The operation of the sulfur electrode, however, is quite complex. Because elemental sulfur is an electronic insulator, graphite felt is added to provide a large area electrode. The two major applications currently envisioned for the sodium-sulfur battery are electric utility load leveling and automotive propulsion. The reported program has two goals, including the development of an efficient high energy battery and the development of a low weight, high power battery. Attention is given to the results of cell testing, sodium-sodium cells, sodium-sulfur cells, an examination of sodium-sulfur cells after testing, and a materials costs estimate for a sodium sulfur cell. G. R.

A78-53339 Chemistry of hot corrosion. J. F. Elliott (MIT, Cambridge, Mass.) In *Solid state chemistry of energy conversion and storage*; Proceedings of the Symposium, New York, N.Y., April

5-8, 1976 Washington, D C , American Chemical Society, 1977, p 225-239 34 refs ERDA-supported research

The current view of the chemical aspects of the hot corrosion of ceramic and superalloy materials is discussed The theory based on the acid/base concept is considered by many in the field to account for the corrosion effects that have been observed It is proposed, however, that there may be other phenomena related to physical imperfections and defects in the protective oxide layer on a ceramic or metal part that may be important Surface and electrochemical effects must be considered also in the development of a comprehensive treatment of hot corrosion (Author)

A78-53340 Nonstoichiometry, order, and disorder in fluorite-related materials for energy conversion L Eyring (Arizona State University, Tempe, Ariz) In Solid state chemistry of energy conversion and storage, Proceedings of the Symposium, New York, N Y , April 5-8, 1976 Washington, D C , American Chemical Society, 1977, p 240-270 35 refs ERDA-supported research

Fluorite-related materials in energy-winning roles are considered, taking into account the use of zirconia- and hafnia-based materials and the employment of thorium-rare earth oxide systems as solid electrolytes, fluorite-related oxides for the nuclear industry, fluorite-related ordered phases in the $M_2O_3WO_3$ system, structural characteristics of the $CeO(x)$ system, and the structure and texture in the binary rare earth oxides Structural data on intermediate rare earth oxide phases are presented in a table Attention is also given to calculated images of the ι phase, observed images of the ι phase, the images of phase transformations and intergrowth in fluorite-related binary oxide systems, and the images of beta, epsilon, and zeta phases G R

A78-53341 Solid metal hydrides - Properties relating to their application in solar heating and cooling G G Libowitz and Z Blank (Allied Chemical Corp , Morristown, N J) In Solid state chemistry of energy conversion and storage, Proceedings of the Symposium, New York, N Y , April 5-8, 1976 Washington, D C , American Chemical Society, 1977, p. 271-283 24 refs

Concepts for using solid metal hydrides for solar heating and cooling are described In solar heating the enthalpy of formation of the metal hydride provides a means of storing solar thermal energy, while in cooling the endothermic dissociation of the hydride is used The properties of metal hydrides required for these applications are reviewed, the most important properties being large enthalpies of formation (but relatively low thermal stabilities) and high hydrogen-to-metal ratios. There are two approaches to developing new hydrides to meet these requirements (1) modifying the properties of known hydrides - examples based on the thermodynamics of solids are discussed in some detail, and (2) synthesizing new intermetallic-compound hydrides. (Author)

A78-53342 Storage of hydrogen isotopes in intermetallic compounds S A Steward, J F Lakner, and F Uribe (California, University, Livermore, Calif) In Solid state chemistry of energy conversion and storage, Proceedings of the Symposium, New York, N Y , April 5-8, 1976 Washington, D C , American Chemical Society, 1977, p 284-297 29 refs Contract No W-7405-eng-48

Reaction of $LaCo_5$ under high pressure has produced a hydride with the $LaCo_5H_9$ composition, which is the expected maximum stoichiometry A comparison of hydrogen solubility in $ErCo_5$ with solubilities of previous studies in $PrCo_5$, $PrCo_3$, and $ErCo_3$ show that hydride stability decreases with lanthanide atomic number and with increasing atom ratio of transition metal to lanthanide metal Empirical methods for estimating ternary hydride enthalpies and free energies are evaluated and are found inadequate for calculating approximate hydrogen plateau pressures (Author)

A78-53343 Chemical conversion using sheet-silicate intercalates. J M Thomas, J M Adams, S H Graham, and D T B Tennakoon (University College of Wales, Aberystwyth, Wales) In Solid state chemistry of energy conversion and storage, Proceedings of the Symposium, New York, N Y , April 5-8, 1976

Washington, D C , American Chemical Society, 1977, p 298-315 36 refs

A description is presented of investigations regarding the synthesis of molecular catalysts by means of a utilization of certain sheet silicate structures within which ion-exchange may first be performed Structural studies of the parent silicates and their deliberately modified derivatives were conducted It is pointed out that a wide variation is possible in regard to the nature of the particular cations that can be inserted between the infinite, two-dimensional anions The interlayer spacing, which obviously governs the ease of diffusion of intercalated reactants and products, is, to a degree, adjustable depending, inter alia, upon factors such as the humidity and the nature of the organic molecules present in the system A resume of structural characteristics of sheet silicates is provided and the formation and structural aspects of sheet silicate intercalates are discussed G R

A78-53344 High-temperature electrolysis/fuel cells - Materials problems. H Obayashi and T Kudo (Hitachi, Ltd , Central Research Laboratory, Kokubunji, Tokyo, Japan). In Solid state chemistry of energy conversion and storage, Proceedings of the Symposium, New York, N Y , April 5-8, 1976

Washington, D C , American Chemical Society, 1977, p 316-363. 152 refs.

The motivation for electrolysis/fuel cell technology is summarized, and problems regarding the development of high-temperature electrolysis cells and medium-temperature fuel cells are discussed (1) a suitable solid electrolyte, (2) a cathode for operating in a highly oxidizing atmosphere mechanically compatible with the electrolyte, (3) a cell design that minimizes material and heat transfer problems, and (4) an electronic conductor stable in a wide range of oxygen partial pressures (1-10 to the minus 20th power atm PO_2) for series connection Materials research addressed to solving these problems is reviewed (Author)

A78-53376 Remote-sensing applications for mineral exploration Edited by W L Smith (Michigan, Environmental Research Institute, Arlington, Va) Stroudsburg, Pa , Dowden, Hutchinson and Ross, Inc, 1977 404 p \$50

Consideration is given to mineral exploration on the basis of remotely sensed data Landsat applications are reviewed and the exploration for fossil and nuclear fuels from orbital altitudes is explored Remote sensing projects for energy development are outlined along with geochemical mapping by spectral ratioing methods Remote sensing projects in Brazil and India are noted

S C S

A78-53377 Foreseeable energy and mineral resource problems W L Smith (Michigan, Environmental Research Institute, Arlington, Va) In Remote-sensing applications for mineral exploration Stroudsburg, Pa , Dowden, Hutchinson and Ross, Inc , 1977, p 9-27 27 refs

The paper surveys present and anticipated mineral resource requirements noting the US dependence on foreign sources Projected energy resources are discussed with reference to oil and gas liquids, coal, natural gas, nuclear energy, and geothermal power Landsat projects in monitoring surface water, soil moisture, snow-pack, and for resource mapping are discussed Remote sensing for nonfuel minerals such as beryllium, cobalt, molybdenum, tungsten, and zinc is considered S C S

A78-53382 * Exploration for fossil and nuclear fuels from orbital altitudes. N. M. Short (NASA, Goddard Space Flight Center, Earth Resources Branch, Greenbelt, Md.) In Remote-sensing applications for mineral exploration. Stroudsburg, Pa., Dowden, Hutchinson and Ross, Inc., 1977, p. 157-198.

The paper discusses the application of remotely sensed data from orbital satellites to the exploration for fossil and nuclear fuels. Geological applications of Landsat data are described including map editing, lithologic identification, structural geology, and mineral exploration. Specific results in fuel exploration are reviewed and a series of related Landsat images is included. SCS

A78-53383 The role of remote sensing for energy development. J. E. Johnston (U.S. Geological Survey, Office of Energy, Reston, Va.) and F. J. Janza (California State University, Sacramento, Calif.) In Remote-sensing applications for mineral exploration. Stroudsburg, Pa., Dowden, Hutchinson and Ross, Inc., 1977, p. 199-234. 20 refs.

The application of remote sensing techniques to energy development projects is considered noting the nature of the data collected and the various types of remote sensors available, such as photography devices, infrared scanners, radiometers, and radar systems. Processes for converting sensor data into the necessary form are described including magnification, restoration, image transfer, enhancement, and image coding. Several types of static hardware and image data processors are listed. SCS

A78-53420 Prospects for the use of amorphous semiconductors in solar energy conversion. J. I. B. Wilson and D. Wearie (Heriot-Watt University, Edinburgh, Scotland). *Nature*, vol. 275, Sept. 14, 1978, p. 93-96. 18 refs. Research supported by the Science Research Council.

Potential applications of amorphous Si in the field of solar energy conversion are reviewed. Research has been stimulated by the comparatively low cost anticipated for the industrial production of amorphous Si, and applications such as photovoltaic conversion of solar energy and photothermal conversion are discussed. Amorphous and crystalline Si are compared for use in several specific contexts. The basic principles and parameters for the operation of solar energy devices are indicated, and some data on the performance of amorphous silicon solar cells are presented. M.L.

A78-53424 Photoelectrochemical reduction of aqueous carbon dioxide on p-type gallium phosphide in liquid junction solar cells. M. Halmann (Weizmann Institute of Science, Rehovot, Israel). *Nature*, vol. 275, Sept. 14, 1978, p. 115, 116. 16 refs.

A78-53425 * Variable-temperature cryogenic trap for the separation of gas mixtures. D. J. Des Marais (NASA, Ames Research Center, Extraterrestrial Biology Div., Moffett Field, Calif.). *Analytical Chemistry*, vol. 50, no. 9, Aug. 1978, p. 1405, 1406. Grant No. NGR-05-007-221.

The paper describes a continuous variable-temperature U-shaped cold trap which can both purify vacuum-line combustion products for subsequent stable isotopic analysis and isolate the methane and ethane constituents of natural gases. The canister containing the trap is submerged in liquid nitrogen, and, as the gas cools, the gas mixture components condense sequentially according to their relative vapor pressures. After the about 12 min required for the bottom of the trap to reach the liquid-nitrogen temperature, passage of electric current through the resistance wire wrapped around the tubing covering the U-trap permits distillation of successive gas components at optimal temperatures. Data on the separation achieved for two mixtures, the first being typical vacuum-line combustion products of geochemical samples such as rocks and the second being natural gas, are presented, and the thermal behavior and power consumption are reported. M.L.

A78-53437 Fuel cells for public utility and industrial power. Edited by R. Noyes. Park Ridge, N.J., Noyes Data Corp. (Energy Technology Review, No. 10), 1977. 331 p. \$42.

The various types of fuel cells, their operation, and use are considered along with an assessment of fuels for power generation by electric utility fuel cells, aspects of fuel cell power plant evaluation, and marketing considerations. A description is presented of fuel cells for public utility applications, taking into account aqueous acid fuel cells, alkaline fuel cells, molten carbonate fuel cells, stabilized zirconia fuel cells, the phosphoric acid fuel cell power system, the alkaline fuel cell power system, the molten carbonate fuel cell power system, the solid electrolyte fuel cell power system, approaches to efficiency calculations, the results of parametric assessment, and capital, site-labor, and operation and maintenance costs. Attention is given to an employment of low-temperature and high-temperature fuel cells. G.R.

A78-53438 World energy resources 1985-2020. World energy demand. I. J. Bloodworth, E. Bossanyi, D. S. Bowers, E. A. C. Crouch, R. J. Eden, C. W. Hope, W. S. Humphrey, J. V. Mitchell, D. J. Pullin, and J. A. Stanislaw (Cambridge University, Cambridge, England). Guildford, Surrey, England, IPC Science and Technology Press, 1978. 115 p. \$31.20.

It is concluded that world energy demand in the year 2020 will be between three and four times present consumption if average economic growth is between 3.0 and 4.1 percent per year and if the efficiency of energy use is improved. Various scenarios of world energy demand are examined with reference to regional energy balances. The future roles of several energy sources such as oil and nuclear energy are considered, and assumptions, methodology, and uncertainties are discussed. M.L.

A78-53439 Unconventional energy resources. P. L. Auer (Cornell University, Ithaca, N.Y.), P. B. Bos, V. W. Roberts, and W. C. Gough (Electric Power Research Institute, Palo Alto, Calif.). In World energy resources 1985-2020. Renewable energy resources. Guildford, Surrey, England, IPC Science and Technology Press, 1978, p. 1-7, 9, 11-63 (61 ff.).

Solar energy, geothermal energy, and fusion power are discussed. Solar sources considered include energy derived directly from sunlight and indirectly in the form of wind, waves, tides, ocean thermal gradients, and fuel (from biomass and other photochemical reactions). Hydrogen production, market penetration of solar energy systems, and solar energy in developing nations are examined. Topics related to geothermal energy include resource types, distribution, electric energy conversion, and economics. Subjects related to fusion power include fusion fuel cycles, progress toward scientific feasibility, and safety and environmental aspects. M.L.

A78-53440 Hydraulic resources. E. L. Armstrong (Utah, University, Salt Lake City, Utah). In World energy resources 1985-2020. Renewable energy resources. Guildford, Surrey, England, IPC Science and Technology Press, 1978, p. 129, 131-155, 157-180.

The utilization of hydraulic resources is examined. Favorable features of hydraulic energy are surveyed, and factors affecting the development of hydraulic resources in both industrialized and nonindustrialized countries are discussed. It is estimated that the probable hydroelectric production by 2020 will increase about five times to approximately 28 million terrajoules, which is a little over 80% of the total developable hydroelectric resource reported in the 1976 World Energy Conference Survey. M.L.

A78-53453 Hydrogen. Its technology and implications. Volume 1 - Hydrogen production technology. Volume 2 - Transmission and storage. Edited by K. E. Cox (New Mexico, University, Albuquerque, N. Mex.) and K. D. Williamson (California, University, Los Alamos, N. Mex.). Cleveland, Ohio, CRC Press, Inc., 1977. Vol. 1, 203 p.; vol. 2, 153 p. Price of vol. 1, \$49.95; vol. 2, \$41.50.

Questions of hydrogen production technology are examined, taking into account aspects of water electrolysis, thermochemical water decomposition, hydrogen from fossil fuels, hydrogen from nuclear energy, and hydrogen from solar energy. Problems of hydrogen transmission and storage are also investigated, giving

attention to the transmission of gaseous hydrogen, metal hydrides as hydrogen storage media and their applications, questions of liquid hydrogen storage and transmission, and materials for hydrogen service G R

A78-53454 Water electrolysis. A P Fickett and F R Kalhammer (Electric Power Research Institute, Palo Alto, Calif.) In Hydrogen Its technology and implications. Volume 1.

Cleveland, Ohio, CRC Press, Inc., 1977, p 3-41 37 refs

The fundamentals of water electrolysis are examined, taking into account cell reactions and functional components, cell voltage, cell current density, polarization curves, the effects of temperature on water electrolysis, the effects of pressure on water electrolysis, and the electrolysis module or stack. The generic types of water electrolysis systems are discussed along with electrolysis system requirements, water electrolysis technologies, and the economics of water electrolysis. Attention is given to the unipolar electrolyzer, the bipolar electrolyzer, aspects of power conditioning and control, cooling fluid circulation and control, product gas-water removal, electrolyte monitoring and control, instrumentation and controls, capital costs, operating costs, and the relationship of hydrogen cost to capital and operating costs G R

A78-53455 * Thermochemical water decomposition. J E Funk (Kentucky, University, Lexington, Ky.) In Hydrogen Its technology and implications. Volume 1. Cleveland, Ohio, CRC Press, Inc., 1977, p. 45-57 36 refs NASA-supported research

At present, nearly all of the hydrogen consumed in the world is produced by reacting hydrocarbons with water. As the supply of hydrocarbons diminishes, the problem of producing hydrogen from water alone will become increasingly important. Furthermore, producing hydrogen from water is a means of energy conversion by which thermal energy from a primary source, such as solar or nuclear fusion or fission, can be changed into an easily transportable and ecologically acceptable fuel. The attraction of thermochemical processes is that they offer the potential for converting thermal energy to hydrogen more efficiently than by water electrolysis. A thermochemical hydrogen-production process is one which requires only water as material input and mainly thermal energy, or heat, as an energy input. Attention is given to a definition of process thermal efficiency, the thermodynamics of the overall process, the single-stage process, the two-stage process, multistage processes, the work of separation and a process evaluation G R

A78-53456 Hydrogen from fossil fuels. R I Kermode (Kentucky, University, Lexington, Ky.) In Hydrogen Its technology and implications. Volume 1. Cleveland, Ohio, CRC Press, Inc., 1977, p 61-115 90 refs

Questions concerning the present and historical industrial use of hydrogen are examined. Ammonia and methanol account for almost 50% of the total US consumption of hydrogen. General process considerations with respect to the water-gas shift reaction and acid-gas removal are discussed, taking into account equilibrium conditions, the process flowsheet, high-temperature low-temperature shift-conversion catalysts, aspects of reactor design, ammonia solution absorption, ethanolamine absorbent systems, alkaline salt processes, the hot carbonate process, and absorption in cold methanol. The different commercial processes are considered, giving attention to process economics, the catalytic decomposition of methane, catalytic steam reforming of hydrocarbons, the catalytic partial oxidation of hydrocarbons, noncatalytic partial oxidation, the steam-iron process, and hydrogen from coal G R

A78-53457 Hydrogen from nuclear energy. R J Jaconetti (California, University, Los Alamos, N. Mex.) In Hydrogen Its technology and implications. Volume 1. Cleveland, Ohio, CRC Press, Inc., 1977, p. 119-141 34 refs

The predicted domestic energy supply and demand deficit could be met by expanded utilization of the large domestic reserve of coal and uranium as fuels and for the production of synthetic liquid and

gaseous fuels. The graphite moderated gas-cooled reactors presently under development are potentially capable of producing the highest process temperatures (about 1800 F) that could be required for larger high-temperature process applications. The development requirements for the realization of a nuclear heat source in high-temperature industrial processes are discussed, taking into account reactor and fuels, materials, and heat-exchange and process systems. Details of hydrogen production with nuclear process heat are considered, giving attention to steam reforming, hydrogen from coal with nuclear process heat, hydrogen from water by thermochemical decomposition with nuclear process heat, and nuclear process heat and the energy future. G R

A78-53458 Hydrogen from solar energy. K E Cox (New Mexico, University, Albuquerque, N. Mex.) In Hydrogen Its technology and implications. Volume 1. Cleveland, Ohio, CRC Press, Inc., 1977, p 145-175 44 refs

Both coal and nuclear energy are considered the primary energy sources from which hydrogen will be produced in the near term. However, alternate energy sources must be sought and developed for the long term. The most obvious energy source possessing the required attributes is solar energy. Use of solar energy has not become widespread largely due to the costs of its collection, conversion, and storage. To use solar energy as a major source of energy, it is highly desirable to be able to store it in a concentrated form that can be easily transported. A candidate system that appears to offer high potential for solar energy conversion and storage is that of the decomposition of water into hydrogen and oxygen. Attention is given to the solar resource, proposed methods of solar energy conversion, ocean thermal energy conversion, power from wind, biomass, artificial solar collection schemes, methods of solar energy conversion to hydrogen, photosynthetic methods, and the economics of hydrogen production from solar energy G R

A78-53459 Transmission of gaseous hydrogen. G G Leeth (General Electric Tempo, Santa Barbara, Calif.) In Hydrogen Its technology and implications. Volume 2. Cleveland, Ohio, CRC Press, Inc., 1977, p 3-10 13 refs

For any hydrogen energy system, pipeline transport of gaseous hydrogen is clearly a major element. A summary is provided of the present status of hydrogen pipeline knowledge. Gas pipelines are considered along with aspects of gas pipeline dynamics, gas pipeline costs, hydrogen pipeline analyses, hydrogen pipeline safety, and hydrogen pipeline operating experience. It is found that the transmission of hydrogen gas in a large pipeline network is technically and economically feasible. For large energy flow rates, the transmission cost would be approximately 50% greater per energy unit than for natural gas. Sufficient experience is available to be confident that hydrogen pipelines can be designed, built, and safely operated on a commercially profitable basis. Modification of existing natural gas pipelines to transport hydrogen is probably feasible G R

A78-53460 Metal hydrides as hydrogen storage media and their applications. J J Reilly (Brookhaven National Laboratory, Upton, N.Y.) In Hydrogen Its technology and implications. Volume 2. Cleveland, Ohio, CRC Press, Inc., 1977, p 13-48 62 refs ERDA-sponsored research

Perhaps the most important factor which limits the use of hydrogen at the present time is the difficulty involved in storing it conveniently and economically. A gaseous storage of hydrogen for use as a common mobile or stationary fuel is not feasible because of the large volume and/or weight of the storage vessels. The storage of hydrogen in the liquid form is expensive and uneconomical in connection with the energy required by the liquefaction process. One potentially attractive alternative to conventional storage methods is storage as a metal hydride. Aspects of metal hydride chemistry are considered along with specific metal-hydrogen systems and their properties. Attention is given to magnesium and magnesium alloys, rare earth alloys, iron-titanium alloys, and vanadium dihydride G R

- A78-53461** Liquid hydrogen storage and transmission F J Edeskuty and K D Williamson, Jr (California, University, Los Alamos, N Mex.) In *Hydrogen Its technology and implications* Volume 2 Cleveland, Ohio, CRC Press, Inc., 1977, p 51 81 46 refs

Liquid hydrogen properties relative to storage and handling are considered along with the current state of the art with respect to storage, transport, and transfer in vacuum jacketed lines Design and operational considerations concerning storage systems and transfer systems are discussed, taking into account sources of heat, insulation systems, structural materials, instrumentation, design and construction, and operations The discussion gives ample evidence of the existence of a well-developed liquid hydrogen technology Because of the care which was taken in the anticipation of problems, it has been possible to produce, transport, store, and use hundreds of millions of gallons of liquid hydrogen while maintaining an admirable safety record

- A78-53489 *** Dendritic web silicon for solar cell application. R G Seidensticker (Westinghouse Research Laboratories, Pittsburgh, Pa.) In *Materials and energy, Selected topics*

Amsterdam, North-Holland Publishing Co., 1977, p 17-22 18 refs
USAF-supported research, Contracts No NAS3-18034, No NAS3-19439

The dendritic web process for growing long thin ribbon crystals of silicon and other semiconductors is described. Growth is initiated from a thin wirelike dendrite seed which is brought into contact with the melt surface. Initially, the seed grows laterally to form a button at the melt surface, when the seed is withdrawn, needlelike dendrites propagate from each end of the button into the melt, and the web portion of the crystal is formed by the solidification of the liquid film supported by the button and the bounding dendrites. Apparatus used for dendritic web growth, material characteristics, and the two distinctly different mechanisms involved in the growth of a single crystal are examined. The performance of solar cells fabricated from dendritic web material is indistinguishable from the performance of cells fabricated from Czochralski grown material. M L

A78-53490 Epitaxial silicon solar cells on 'ribbon' substrates. H Kressel, R V D'Aiello, E R Levin, P H Robinson, and S H McFarlane (RCA Laboratories, Princeton, N.J.) In Materials and energy, Selected topics. Amsterdam, North-Holland Publishing Co., 1977, p 23-44 7 refs NSF Grant No AER-74-15532

The paper describes the use of thin (approximately 50-micron) epitaxial layers formed from high-purity dichlorosilane and grown on Si in ribbon form to obtain solar cells. Characteristics of these diodes are reported. The epitaxial silicon solar cells are found to perform better than solar cells prepared by a direct diffusion process. The reasons for the differences in performance are examined with attention to electrical properties, solar cell structures, and the effects of major defects (boundary effects and the effects of large inclusions). M L

A78-53491 Silicon films on foreign substrates for solar cells. T L Chu (Southern Methodist University, Dallas, Tex.) In Materials and energy, Selected topics. Amsterdam, North-Holland Publishing Co., 1977, p 45-60 22 refs Contract No E(04-3)-1285

Silicon films on foreign substrates have been used for various device applications for over fifteen years. The current interest in the photovoltaic conversion of solar energy for terrestrial applications has stimulated investigations on the feasibility of using polycrystalline silicon films on low-cost substrates for solar cell purposes. In this paper, the deposition and properties of silicon films on several low cost substrates, such as steel, aluminum, graphite, and metallurgical silicon, are reviewed. The characteristics of solar cells prepared from these films are discussed. The present results indicate that the deposition of a silicon film containing a p-n junction on a purified recrystallized metallurgical silicon substrate is a promising approach for the fabrication of low-cost solar cells for terrestrial applications. (Author)

A78-53492 Materials aspects of Cu₂S for CdS/Cu₂S solar cells. H C Hadley, Jr and W F Tseng (Delaware University, Newark, Del.) In Materials and energy, Selected topics. Amsterdam, North-Holland Publishing Co., 1977, p 61-72 29 refs NSF Grant No AER-72-03478

Renewed interest in CdS/Cu₂S solar cells has led to significant improvements in conversion efficiency and theoretical understanding. These developments are discussed from the viewpoint of the material properties of the copper sulfide necessary for efficient thin film polycrystalline devices. Both the bulk electronic properties and the structural aspects are shown to play a role in the device operation. A clearer understanding of the role these properties play in device operation may lead to even further improvements in efficiency or to processing compromises for cost reduction. (Author)

A78-53493 II-VI compounds in solar energy conversion. A L Fahrenbruch (Stanford University, Stanford, Calif.) In Materials and energy, Selected topics. Amsterdam, North-Holland Publishing Co., 1977, p 73-91 99 refs

The preparation of thin (2-10 micron) films of II-VI compounds and their application in heterojunction solar cells are discussed. Advantageous features of heterojunction cells are considered, and properties of CdS, CdSe, CdTe, ZnTe, ZnSe, ZnS, ZnCdS, ZnSeS, and CuInSe₂ are reviewed. Simple models are proposed for determining the effects of grain boundaries in thin films and heterojunction lattice mismatch, and the results are considered in the context of required film properties and cell configurations. Experimental results are presented for a number of heterojunctions with particular attention directed to the CdS/CdTe cell. M L

A78-53494 CdS thin films for terrestrial solar cells. L M Fraas (Hughes Research Laboratories, Malibu, Calif.) and Y Ma (Stanford University, Palo Alto, Calif.) In Materials and energy, Selected topics. Amsterdam, North-Holland Publishing Co., 1977, p 92-107 41 refs

Four different polycrystalline thin-film CdS-based solar cells have been reported with conversion efficiencies in excess of 5%. These cells (Cu₂S/CdS, CdTe/CdS, InP/CdS, and CuInSe₂/CdS) are briefly reviewed here. It is noted that present economic projections require the fabrication of terrestrial solar cells with 10% conversion efficiency, a constructed array cost of \$60/sq m, and at volumes of approximately 100 million sq m/yr. The paper describes some of the physical constraints on CdS thin films and the economic constraints on CdS thin film fabrication, imposed, respectively, by the 10% conversion efficiency requirement and the low-cost production scale-up requirement. (Author)

A78-53495 * LPE growth of GaAs-Ga(1-x)Al(x)As solar cells. J M Woodall and H J Hovel (IBM Thomas J Watson Research Center, Yorktown Heights, N.Y.) In Materials and energy, Selected topics. Amsterdam, North-Holland Publishing Co., 1977, p 108-116 11 refs NASA-supported research

The procedures for the liquid phase epitaxial (LPE) growth of high efficiency p-Ga(1-x)Al(x)As, p-GaAs, n-GaAs solar cells have been developed. The methods are based on forming the structure by a one-step process in which the Zn-diffused p-n junction in the n-type GaAs substrate forms in conjunction with the LPE growth of the Zn-doped p-Ga(1-x)Al(x)As layer. For structures with 1-10 micron thick Ga(1-x)Al(x)As layers, an isothermal soak of the GaAs substrate in a saturated Ga-Al-As Zn melt followed by ramp cooling produces good cells. For structures with less than one micron thick Ga(1-x)Al(x)As layers, it is necessary to isothermally soak the GaAs substrate in an undersaturated melt, and ramp cooling is not required. (Author)

A78-53496 Vapor-phase-epitaxial growth of n-AlAs/p-GaAs solar cells. W D Johnston, Jr (Bell Telephone Laboratories, Inc., Holmdel, N.J.) In Materials and energy, Selected topics. Amsterdam, North-Holland Publishing Co., 1977, p 117-127 20 refs

The described procedure for producing high performance heterostructure solar cells involves the chloride-transport vapor-phase growth of n-AlAs on p-GaAs single-crystal substrates in an all-alumina reactor. The same technique and conditions can be applied to grow AlAs layers on polycrystalline films of GaAs on graphite substrates, and it is suggested that this material can be used for less expensive lower-performance cells after some problems relating to compatible contracting technology are resolved. The stability of single-crystal and polycrystal AlAs layers is considered, and the suitability of the vapor-phase growth method for large-scale production is examined. M L

A78-53497 Chemistry and preparation of InP/CdS solar cells. S Wagner, J L Shay, M Bettini (Bell Telephone Laboratories, Inc., Holmdel, N.J.), K J Bachmann, and E Buehler (Bell Telephone Laboratories, Inc., Holmdel and Murray Hill, N.J.) In Materials and energy, Selected topics. Amsterdam, North-Holland Publishing Co., 1977, p 128-136 17 refs

The p-InP/n-CdS heterodiode has reached Air Mass 2 solar conversion efficiencies of 150% in single crystal and 57% in polycrystalline thin film form. After a brief description of the physical principles of this solar cell, an account of its preparation and characterization is given. Key results are included on photocurrent, photovoltage, quantum efficiency, as well as on stability and operation at high temperature (Author)

A78-53498 The current status of the preparation of single crystals, bicrystals, and epitaxial layers of p-InP and of polycrystalline p-InP films for photovoltaic applications. K. J. Bachmann, E. Buehler, F. A. Thiel (Bell Telephone Laboratories, Inc., Murray Hill, N.J.), B. I. Miller, and J. H. McFee (Bell Telephone Laboratories, Inc., Murray Hill and Holmdel, N.J.) In *Materials and energy*, Selected topics. Amsterdam, North-Holland Publishing Co., 1977, p. 137-150. 68 refs

A78-53499 Multicomponent tetrahedral compounds for solar cells. S. Wagner and P. M. Bridenbaugh (Bell Telephone Laboratories, Inc., Holmdel, N.J.) In *Materials and energy*, Selected topics. Amsterdam, North-Holland Publishing Co., 1977, p. 151-159. 72 refs

Preparation and properties are reviewed of solar cells based on multicomponent compounds. Cells made with CuInSe₂, CuInS₂, and CuGaSe₂ are discussed in detail. New results are presented on single-crystal p-CuInS₂/n-CdS and p-Cu₂CdSnS₄/n-CdS heterodiodes (Author)

A78-53500 Ionic and mixed conductors for energy storage and conversion systems. D. H. Whitmore (Northwestern University, Evanston, Ill.) In *Materials and energy*, Selected topics. Amsterdam, North-Holland Publishing Co., 1977, p. 160-179. 122 refs. Contract No. EY-76-S-02-2564

Experimental information is reviewed on the structures and the ionic transport properties of a number of solids which are predominantly ionic conductors possessing unusually mobile selected ionic species. The structural criteria for finding fast ionic diffusivity in such solid phases (fast ion conductors) is discussed and the current status of the theory of optimized ionic conduction in solid electrolyte materials is reviewed. Recent data on selected materials which exhibit tunnel or layer structures, within which significant charge transport occurs due to the motion of both ionic and electronic species (mixed conductors), is also discussed. Emphasis is placed on those mixed conductors which might find application as cathode materials in secondary cells (Author)

A78-53502 Metal chalcogenides as reversible electrodes in nonaqueous lithium batteries. D. W. Murphy and F. A. Trumbore (Bell Telephone Laboratories, Inc., Murray Hill, N.J.) In *Materials and energy*, Selected topics. Amsterdam, North-Holland Publishing Co., 1977, p. 185-199. 46 refs

The paper describes the preparation and properties of the transition metal chalcogenides as reversible cathode materials and explains the materials aspects of lithium batteries involving the di-, tri-, and tetrachalcogenides of niobium and/or titanium. A number of transition metal chalcogenides possessing van der Waals bonded structures undergo topotactic reactions with lithium, and, as this type of reaction is often quite reversible, it provides the basis for a new class of secondary lithium batteries. Structures, electrochemistry, and changes that occur during lithiation are summarized. M. L.

A78-53503 Electrode materials for photoelectrochemical devices. A. J. Nozik (Allied Chemical Materials Research Center, Morristown, N.J.) In *Materials and energy*, Selected topics. Amsterdam, North-Holland Publishing Co., 1977, p. 200-209. 57 refs

The theory and experimental status of energy conversion using photoelectrochemical devices is reviewed. Two classes of devices are considered: photoelectrolysis cells and electrochemical photovoltaic cells. The advantages of these devices, as well as associated unique materials problems, are discussed and compared to all solid-state devices (Author)

A78-53519 # Solar power plant with folding concentrator for carrying out industrial processes in space (Solnechnaia energeticheskaia ustanovka so skladyvayushchimsia kontsentratorom dlia osushchestvleniia tekhnologicheskikh protsessov v kosmicheskom prostranstve). I. N. Frantsevich, V. S. Dverniakov, V. V. Pasichnyi, I. E. Kasich-Pilipenko, A. F. Rozhenko, and D. K. Sattarov (*International Astronautical Federation, International Astronautical Congress, 27th, Anaheim, Calif., Oct. 10-16, 1976*) *Kosmicheskie issledovaniia na Ukraine*, no. 11, 1977, p. 70-74. 7 refs. In Russian

The folding solar power plant is designed according to a Mersenne optical arrangement with Fresnel lens, in which a power fiber optical waveguide is used to transmit the high-density luminous flux. The weight of the paraboloidal concentrator, counterreflector, focusing lens, and all other structural components is 60 kg. The ground version is the Helios 2 installation, on which experimental investigations are being carried out on melting, welding, soldering, and cutting of metals with the aid of concentrated solar energy. The possibilities of the installation for space operation are evaluated on the basis of results obtained so far. P. T. H.

A78-53610 * # Advantages of thin silicon solar cells for use in space. O. S. Denman (Boeing Aerospace Co., Seattle, Wash.). *American Astronautical Society and Deutsche Gesellschaft für Luft- und Raumfahrt, Goddard Memorial Symposium, 16th, Washington, D.C., Mar. 8-10, 1978, AAS Paper 78-024a*. 12 p. 5 refs. Contract No. NAS9-15196

A system definition study on the Solar Power Satellite System showed that a thin, 50 micrometers, silicon solar cell has significant advantages. The advantages include a significantly lower performance degradation in a radiation environment and high power-to-mass ratios. The advantages of such cells for an employment in space is further investigated. Basic questions concerning the operation of solar cells are considered along with aspects of radiation induced performance degradation. The question arose in this connection how thin a silicon solar cell had to be to achieve resistance to radiation degradation and still have good initial performance. It was found that single-crystal silicon solar cells could be as thin as 50 micrometers and still develop high conversion efficiencies. It is concluded that the use of 50 micrometer silicon solar cells in space-based photovoltaic power systems would be advantageous. G. R.

A78-53639 The application of a 2-D convective cloud model to waste heat release from proposed nuclear energy centers. C. E. Hane (Battelle Pacific Northwest Laboratories, Richland, Wash.). *Atmospheric Environment*, vol. 12, no. 9, 1978, p. 1839-1848. 20 refs. Contract No. E(45-1)-1830

A78-53653 The importance of the electron affinity of oxide-semiconductors as used in solar cells. R. Singh and J. Shewchun (McMaster University, Hamilton, Ontario, Canada). *Applied Physics Letters*, vol. 33, Oct. 1, 1978, p. 601-603. 14 refs. Contract No. E(04-3)-1203

Oxide semiconductors (such as In₂O₃ and SnO₂) may be used to form barrier devices on semiconductors with high photovoltaic conversion efficiencies. It is noted that the electron affinity of such semiconductors as found by electrical measurements of oxide-semiconductor/base-semiconductor systems are often incorrect. Thus electron affinity must be determined on the basis of techniques which do not incorporate the electrical parameters of the device. S. C. S.

A78-53654 Vapor-grown InGaP/GaAs solar cells. G. H. Olsen, M. Ettenberg, and R. V. D'Aiello (RCA Laboratories, Princeton, N.J.) *Applied Physics Letters*, vol. 33, Oct. 1, 1978, p. 606-608. 9 refs

The GaCl/AsH₃ hydride technique was used to grow GaAs solar cells with conversion efficiencies to 14% at Am1. The GaAs top surface was passivated by thin InGaP layers and a 70-fold increase in photoluminescence was observed. Open-circuit voltages to 0.96 V and short-circuit current densities to 22 mA/sq cm were reported. Increasing p-layer thickness caused increased open-circuit voltage, fill

factor, and conversion efficiency. Decreasing p-layer thickness caused increased short-circuit current density. SCS

A78-53658 A 15% efficient silicon MIS solar cell. R. B. Godfrey and M. A. Green (New South Wales, University, Kensington, Australia). *Applied Physics Letters*, vol. 33, Oct. 1, 1978, p. 637-639. 11 refs. Research supported by the Australian Research Grants Committee, Electrical and Radio Research Boards of Australia, and Utah Foundation.

Substantial improvements in energy conversion efficiency are reported for silicon MIS solar cells fabricated on both single-crystalline and semicrystalline substrates. Based on active area, AM1 efficiencies of 15.1% and 12.6%, respectively, have been obtained for 3.1-sq-cm cells at 26°C. (Author)

A78-53659 Fabrication and characterization of indium tin oxide (ITO)/polycrystalline silicon solar cells. G. Cheek, N. Inoue, S. Goodnick, A. Genis, C. Wilmsen, and J. B. DuBow (Colorado State University, Fort Collins, Colo.). *Applied Physics Letters*, vol. 33, Oct. 1, 1978, p. 643-645. 17 refs.

Efficient indium tin oxide (ITO)/polycrystalline silicon heterojunction solar cells have been fabricated utilizing neutralized ion-beam sputtering techniques. These cells were fabricated on single-pass float-zone-refined silicon. Conversion efficiencies of 6.25% under AM1 illumination have been observed. Cells were analyzed by I-V characteristics and a scanning laser photoresponse technique. Qualitative minority-carrier lifetime has been mapped using the EBIC mode of a SEM. This has revealed a reduced photoresponse at the grain boundaries independent of grain size, and also at defect clusters within individual grains. Surface blemishes and etch pits are not important in reducing the cell photoresponse. It appears that the low-temperature processing inherent in semiconductor-insulator-semiconductor solar cells is applicable to polycrystalline material. (Author)

A78-53681 Theory of finite-beta-modified drift waves. L. Chen, J. Hsu, P. K. Kaw, and P. H. Rutherford (Princeton University, Princeton, N.J.). *Nuclear Fusion*, vol. 18, Oct. 1978, p. 1371-1378. 8 refs. Contract No. EY-76-C-02-3073.

A theory is presented for radial eigenmode analyses of finite-beta-modified drift waves in a sheared magnetic field. The finite-beta effects are separated from electrostatic effects. On the basis of three spatial scales, a matching procedure is used to find the finite-beta effects. A perturbation analysis is used to include electrostatic effects. The theory is applied to the universal drift mode. An analysis is also made of the corresponding eigenmode structure, noting finite magnetic perturbations. SCS

A78-53682 Plasma energy confinement in conventional mirrors with externally heated electrons. H. L. Berk, D. L. Correll, M. E. Rensink (California, University, Livermore, Calif.), and C. Gormezano (California, University, Livermore, Calif., EURATOM and Commissariat à l'Energie Atomique, Grenoble, France). *Nuclear Fusion*, vol. 18, Oct. 1978, p. 1379-1388. 13 refs. Contract No. W-7405-eng-48.

By means of a 2-D, multi-species, Fokker-Planck code, it is found for conventional mirror reactors that heating of the electrons from an external power source leads to a decrease in Q . Likewise, for mirror plasmas such as 2X11B, electron heating does not improve the total energy confinement because of additional losses associated with quasi-linear stabilization requirements. (Author)

A78-53683 Non-linear saturation of the trapped-ion mode by mode coupling in two dimensions. B. I. Cohen and W. M. Tang (Princeton University, Princeton, N.J.). *Nuclear Fusion*, vol. 18, Oct. 1978, p. 1389-1416. 21 refs. Contracts No. E(11-1) 3073, No. W-7405-eng-48.

Consideration is given to the nonlinear saturation by mode coupling of the dissipative trapped-ion mode, noting both radial and poloidal variations. The derivation of the nonlinear model equation is presented noting the systematic addition of weakly perturbative

kinetic effects to the Kadomtsev-Pogutse fluid equations. Attention is given to the radial instability of one-dimensional equilibria and to two-dimensional equilibria established by three-wave interactions. The case very close to linear marginal stability is examined where a single unstable mode couples with itself via a four-wave interaction. Calculations are presented for the transport of particle flux and the scalings of the transport coefficient. The saturated amplitude with tokamak parameters is reported. SCS

A78-53685 Numerical computation of the density profile produced by 10.6-micron irradiation of an SiO₂ microballoon. M. A. Strosio, D. B. Henderson (California, University, Los Alamos, N. Mex.), and A. G. Petschek. *Nuclear Fusion*, vol. 18, Oct. 1978, p. 1425-1430. 27 refs.

The paper presents a two-dimensional numerical simulation of the time-dependent density profile produced by the irradiation of a 200-micron-diameter SiO₂ microballoon with a two-beam CO₂ laser operating at 0.5 kJ. Each laser beam is assumed to have a Gaussian spot profile containing 80% of the energy in a 180-micron diameter, a temporal profile rising to a peak at 200 ps, and a 250-J energy. The results are considered with reference to (1) absorption measurements which are based on the assumption that scattered light emanates from a point source, (2) the unification of previous calculations, and (3) expanding plasma symmetry. SCS

A78-53686 Feedback stabilization of axisymmetric MHD instabilities in tokamaks. E. Rebhan (Max-Planck-Institut für Plasmaphysik GmbH, Garching, Dusseldorf, Universität, Dusseldorf, West Germany) and A. Salat (Max-Planck-Institut für Plasmaphysik GmbH, Garching, West Germany). *Nuclear Fusion*, vol. 18, Oct. 1978, p. 1431-1444. 35 refs. EURATOM-sponsored research.

A stability principle is derived and applied to simple tokamak configurations in order to study feedback stabilization of unstable, vertically elongated tokamak plasmas. For practical applicability it is assumed that the fast instabilities are slowed down by passive conductors so that only slow motions have to be considered. Numerical results are presented for a surface current model of plasma with one conjugate pair of axisymmetric feedback loops. Stabilization is possible, except in a limited region of loop positions. The optimum loop position in the region with possible stabilization is determined. (Author)

A78-53690 Laser acceleration of reactor-fuel pellets. F. S. Felber (General Atomic Co., San Diego, Calif.). *Nuclear Fusion*, vol. 18, Oct. 1978, p. 1469-1471. 15 refs. Research supported by the Electric Power Research Institute.

A method for fuelling a fusion power reactor by the injection of pellets accelerated by laser-produced ablation is reported. Estimates suggest that present laser technology is adequate for accelerating fuel pellets to a velocity required for the fuelling of a demonstration thermonuclear reactor. The laser requirements are energies of tens of kJ, pulse widths of tens of microsec, intensities of about 1 GX/sq cm focused over a 10-cm pellet trajectory, and a repetition rate of tens of Hz. SCS

A78-53696 Photocurrent loss within the depletion region of polycrystalline solar cells. M. A. Green (New South Wales, University, Kensington, Australia). *Solid-State Electronics*, vol. 21, Sept. 1978, p. 1139-1144. 7 refs.

The collection efficiency of carriers optically generated within the depletion region of polycrystalline solar cells is analyzed. The extent of the low collection efficiency region surrounding grain boundaries is shown to be very much smaller in the depletion layer than in the bulk quasi-neutral regions of the cells. For the optimum case where the grain boundaries are perpendicular to the edges of the depletion layer, it is shown that, near the center of the layer, the low collection efficiency area extends only a fraction of an extrinsic Debye length from the grain boundary. (Author)

A78-53804 # Calculation of the electromagnet for a high-speed magnetic-levitation surface transportation system (Raschet elektromagnitna sistemy magnitnogo podvesa dlia vysokoskorostnogo nazemnogo transporta /VSNT/). B V Lobov, V Ia Pali, A G Nikitenko, V P Grinchenkov (Novocherkasskii Politekhnikheskii Institut, Novocherkassk, USSR), and V I Bocharov (Vsesoiuznyi Elektrotekhnikheskii Nauchno-Issledovatel'skii Institut, Moscow, USSR) *Elektromekhanika*, July 1978, p 712-717 In Russian

The paper discusses the calculation and optimization of magnets for a maglev transportation system. The optimality criterion is the maximum ratio of electromagnetic force to gravity force acting on the portion of the magnet suspended to the rail, for given values of air gap, pole width, and coil length, the ratio of electromagnetic force to consumed power is also taken into account. B.J

A78-53807 Energy reeds and the environment. S. Bjork and W. Graneli (Lund, Universitet, Lund, Sweden) *Ambio*, vol. 7, no. 4, 1978, p. 150-156. 25 refs

The cultivation of reeds (Phragmites) in Sweden as a source of heating fuel is considered. Ecology, environmental modification, harvesting, energy output, and costs are discussed. It is suggested that it is economically advantageous to preserve wetland areas for reed growth, and that the preservation, enlargement, management, and utilization of wetlands would supply several gains in terms of environmental protection. The storage of water to keep the water level high during the period of rapid growth, the attractiveness of the pond environment for birds and roe deer, and the retardation of pond ageing are considered. M.L.

A78-53817 Solar generators and their possibilities (Solar-generatoren und ihre Moglichkeiten). E. Sommer (Fachbeirat Laser-Optoelektronik, Bonn, West Germany) *Sonnenenergie*, vol. 3, July-Aug. 1978, p. 19-21. In German

Terms used to describe solar cells and solar generator systems are defined, and solar energy applications which do not require large amounts of energy are surveyed. (Examples include providing power for telephone centers in remote areas and warning lights for aircraft.) The present capabilities of solar generators which produce less than 100 kW is examined with reference to alternate energy sources and technical and economic limitations. The future role of solar energy is considered. M.L.

A78-53818 The cost/effectiveness of future solar electricity generation (Die Wirtschaftlichkeit künftiger solarer Stromerzeugung). H. Seitz *Sonnenenergie*, vol. 3, July-Aug. 1978, p. 23, 24. 9 refs. In German

The cost of solar electricity generation from a system of solar cells and wind converters is estimated and compared to the costs of generating and transporting energy produced by nuclear energy or by coal. Durability, fuel costs, and power-heat coupling are examined. The increase in energy use in West Germany by the year 2000 is considered, and the proportion of this demand that could be satisfied by solar energy is estimated. M.L.

A78-53819 Energy considerations in the operation of solar installations (Energiebetrachtungen zur Steuerung von Solaranlagen). K. Schwarz *Sonnenenergie*, vol. 3, July-Aug. 1978, p. 26, 28-30. In German

Equations relating various parameters of solar collectors are introduced, and several examples of their application are presented. Topics considered include the amount of useful energy derived from a collector, the control of energy transport, energy storage, and the operation of a collector in conjunction with a storage system. The numerical examples involve problems such as the calculation of usable energy obtained at different temperatures. M.L.

A78-53863 Short-term storage and wind power availability. M. B. Anderson, K. Newton, M. Ryle, and P. F. Scott (Cambridge University, Cambridge, England) *Nature*, vol. 275, Oct. 5, 1978, p. 432-434. 6 refs. Research supported by the Science Research Council and Royal Commission for the Exhibition of 1851.

Hourly wind and temperature measurements over a 17-yr period were used to investigate the feasibility of a simple system in which wind power is used in conjunction with 150-hour thermal storage for providing domestic space heating for the U.K. The model system consists of connected turbines providing the sole means of heating for three groups of houses, each house being equipped with a thermal store having a half-power decay time of 150 hours. It was found that the temperature in the houses is kept within 3°C of the nominal temperature of 20°C for 86% of the time. It is shown that use of too high a rated speed (wind speed at which turbine produces peak output) leads to large fluctuations in available power and could result in more expensive design of turbine for a given annual energy output. P.T.H.

A78-53916 # Development of a combustion chamber for an experimental MHD generator (Razrabotka kamery sgoraniia opyt-nogo MGD generatora) Ia S. Zhuludov (Akademiia Nauk Ukrainskoi SSR, Institut Elektrodinamiki, Kiev, Ukrainian SSR) *Teploenergetika*, Aug. 1978, p. 45-48. 8 refs. In Russian

The requirement placed on the combustion chamber of an MHD generator operating with nonpreheated fuel are formulated. A combustion chamber designed for gaseous fuel, which meets the formulated requirements is described. Particular attention is given to design solutions leading to an ordered spatial structure of the flow and a drastic decrease in fluctuations. V.P.

TESTS OF CRASH-RESISTANT FUEL SYSTEM FOR GENERAL AVIATION Interim Report, Feb. 1976 - Jun. 1977

William M Perrella, Jr Mar 1978 32 p

(FAA Proj 184-521-100)

(AD-A054141 FAA-NA-77-48, FAA-RD-78-28) Avail NTIS HC A03/MF A01 CSCL 01/3

A significant percentage of general aviation aircraft accidents result in post-crash fires due to the ignition of fuel spillage, often contributing injury or death to the aircraft occupants. Testing was performed to demonstrate the performance of light-weight, flexible, crash-resistant fuel cells combined with the use of frangible fuel line couplings. Included in these tests were three full-scale crash tests of a typical light twin aircraft. In all of these tests, the crash-resistant fuel system performed satisfactorily.

ENERGY CONSUMPTION PROGRAM. A COMPUTER MODEL SIMULATING ENERGY LOADS IN BUILDINGS

F W Stoller, F L Lansing, V W Chai, and S Higgins *In its*
The Deep Space Network 15 Jun 1978 p 288-289 refs

Avail NTIS HC A14/MF A01 CSCL 10B

The JPL energy consumption computer program developed as a useful tool in the on-going building modification studies in the DSN energy conservation project is described. The program simulates building heating and cooling loads and computes thermal and electric energy consumption and cost. The accuracy of computations are not sacrificed, however, since the results lie within + or - 10 percent margin compared to those read from energy meters. The program is carefully structured to reduce both user's time and running cost by asking minimum information from the user and reducing many internal time-consuming computational loops. Many unique features were added to handle two-level electronics control rooms not found in any other program.

EROSION /CORROSION OF TURBINE AIRFOIL MATERIALS IN THE HIGH-VELOCITY EFFLUENT OF A PRESSURIZED FLUIDIZED COAL COMBUSTOR

Glenn R Zellars, Anne P Rowe, and Carl E Lowell Jul 1978 33 p refs

(NASA-TP-1274 E-9507) Avail NTIS HC A03/MF A01 CSCL 11F

Four candidate turbine airfoil superalloys were exposed to the effluent of a pressurized fluidized bed with a solids loading of 2 to 4 g/scm for up to 100 hours at two gas velocities, 150 and 270 m/sec, and two temperatures, 730 deg and 795 C. Under these conditions, both erosion and corrosion occurred. The damaged specimens were examined by cross-section measurements, scanning electron and light microscopy, and X-ray analysis to evaluate the effects of temperature, velocity, particle loading, and alloy material. Results indicate that for a given solids loading the extent of erosion is primarily dependent on gas velocity. Corrosion occurred only at the higher temperature. There was little difference in the erosion/corrosion damage to the four alloys tested under these severe conditions.

MeOH was found to be more effective than i-PrOH in the base-catalyzed cleavage of the model compound phenyl ether (Ph-o-Ph), and with much less alcohol condensation. Also, CO in the presence of H₂O and KOH effectively reduces coal in reactions at 400 C (753 F) for 20 min, providing about 20% hexane soluble and 50% benzene soluble products, with the remainder being pyridine soluble. The interaction of Illinois No 6 (PSOC-25) coal with a 50/50 mixture of tetralin and decane and also with dihydronaphthalene were determined at 400 C. Coal treated with the tetralin decane mixture yielded products about half as soluble in pyridine as those obtained with pure tetralin. Under the same conditions dihydronaphthalene was superior to Tetralin for coal solubilization at 400 C and reaction times up to 4 min. Illinois No 6 coal from Franklin County was treated with tetralin at 400 C for reaction times from 30 sec to 4 min.

Avail NTIS

HC A09/MF A01

A program is summarized which develops biomass resources to produce clean fuels, petrochemical substitutes, and other energy incentive products. These products will supplement similar products made from conventional fossil fuels. All forms of plant materials, those grown on land and in water were considered. Forest and crop residues, crops grown for their energy content, and animal manures were also considered. Research and development in the following areas were conducted: (1) growing biomass, (2) harvesting, collection, transporting, and storing biomass, and (3) converting biomass.

THREE DIMENSIONAL FREE SURFACE MODEL FOR THERMAL DISCHARGE STUDY Ph.D. Thesis

Ching-fen Tsai 1977 211 p

Avail. Univ. Microfilms Order No. 78-08254

The rapid growth both in electrical energy demand and in the unit size of thermal power plants has resulted in an increasing concern with the effects of heated water on the environment. The analysis of thermal discharges with the least possible environmental impact and with an increase in cooling efficiency has become an important part of power plant siting evaluation. The set of governing equations for mass, momentum, and energy were solved simultaneously by using the finite difference approximation method. Both surface and submerged types of discharge systems in an estuary and ocean coast were modeled with various environmental conditions. The results from the model were satisfactorily compared both with airborne I-R data and in-situ field measurements. When applying the model to a specific site, only the initial conditions, boundary conditions, and the bottom topography need to be modified.

AN EXPERIMENTAL STUDY OF RECIPROCATING INTERNAL COMBUSTION ENGINES OPERATED ON HYDROGEN Ph.D. Thesis

Howard Stokes Homan 1978 220 p

Avail. Univ. Microfilms Order No. 7809490

In order to determine the potential of direct cylinder injection for hydrogen-fueled engines, power output, thermal efficiency, and oxides of nitrogen emissions were measured for cooperative fuel research engine configurations having the standard Otto head, the standard Diesel head, and a Diesel head modified to simulate the combustion chamber of D399 series Caterpillar diesel engines. Reciprocating internal combustion engines can be operated on hydrogen using direct cylinder injection starting late in the compression stroke. This mode of operation provides control over the rate of combustion, offers a solution to fundamental engine problems such as knock, rough running due to high rates of pressure rise, and to high amplitude pressure waves in the cylinder.

STUDY AND PROGRAM PLAN FOR IMPROVED HEAVY DUTY GAS TURBINE ENGINE CERAMIC COMPONENT DEVELOPMENT Final Report

H. E. Helms May 1977 156 p refs

(Contract EX-76-A-31-1011, NAS3-20064)

(NASA-CR-135230, CONS/0064-1, DDA-EDR-9068) Avail. NTIS HC A08/MF A01 CSCL 21A

A fuel economy of 213 mg/W h (0.35 lb/hp-hr) brake specific fuel consumption by 1981 through use of ceramic materials, with conformance to current and projected Federal noise and emission standards was demonstrated and a commercially viable engine is described. Study results show that increased turbine inlet and regenerator inlet temperatures, through the use of ceramic materials, contribute the greatest amount to achieving fuel economy goals. Further, improved component efficiencies for the compressor, gasifier turbine, power turbine, and regenerator disks show significant additional gains in fuel economy. Fuel saved in a 500,000 mile engine life, risk levels involved in development, and engine related life cycle costs for fleets (100 units) of trucks and buses were used as criteria to select work goals for the planned program.

CRASH TESTING OF NUCLEAR FUEL SHIPPING CONTAINERS

R. M. Jefferson and H. R. Yoshimura Dec 1977 50 p refs (Contract EY-76-C-04-0789)

(SAND-77-1462) Avail. NTIS HC A03/MF A01

In an attempt to understand the dynamics of extra severe transportation accidents and to evaluate state-of-the-art computational techniques for predicting the dynamic response of shipping casks involved in vehicular system crashes, a program was initiated to investigate these areas. Computational methods for predicting the effects of the accident environment were utilized and the damage incurred by a container as the result of such an accident was calculated. The second phase involves the testing of 1/8 scale models of transportation systems. Through the use of instrumentation and high-speed motion photography, the accident environments and physical damage mechanisms were studied in detail. After correlating the results of these first two phases, a full scale event involving representative hardware was conducted. Results indicate that both computational techniques and scale modeling are viable engineering approaches to studying accident environments and physical damage to shipping casks.

ADVANCED INDUSTRIAL GAS TURBINE TECHNOLOGY READINESS DEMONSTRATION PROGRAM PHASE 1: DESIGN STUDY Final Report

J. K. Schweitzer and B. T. Brown Oct 1977 220 p

(Contract EY-76-C-05-5035)

(HCP/T5035-1) Avail. NTIS HC A10/MF A01

Design optimization studies and resulting conceptual engine definition of an advanced industrial gas turbine in the 15,000 shp/10Mw class are presented along with the detail aerodynamic and mechanical design of the 18:1 pressure ratio axial/centrifugal compressor and 2500 F combustor exit temperature (CET) turbine first vane and blade critical component test rigs. The design approach was to combine advanced aircraft turbine cooling and high pressure compressor technology with the requirements of simplicity and rugged construction for industrial engines to achieve increased efficiency, improved durability, fuel flexibility, fewer number of parts, and hence, lower initial and operating costs as compared to current industrial gas turbines. Cycle studies indicate that a specific fuel consumption at ISO conditions of 0.37 is attainable.

MONITORING SOLAR RADIATION FOR SOLAR ENERGY

Lester Machta /in WMO Solar Energy 1977 p 1-35 refs

(Grant NSF AFR-75-17303)

Avail. NTIS HC A99/MF A01

Requirements for solar energy monitoring are reviewed. These include instruments, type of users, accuracy and network requirements, insolation data requirements, and scientific requirements for solar radiation data related to a comprehensive solar energy program. A method is suggested which corrects

past insolation data. This method compares actual observations for clear solar noon with those estimated from other observations or from theory. Global solar radiation estimates are derived using sunshine or cloud information either through regression analysis or from theoretical calculations. The need for providing users with data on solar radiation falling on inclined surface, requiring the separation of direct and diffuse components from the global solar radiation is emphasized. ESA

N78-28511# World Meteorological Organization, Geneva (Switzerland)

FIRST RESULTS OBTAINED FROM THE SWISS MOBILE SYSTEM FOR SOLAR RADIATION MEASUREMENTS

A. Heimo and P. Valko. *In its* Solar Energy 1977 p 144-152 refs

Avail NTIS HC A99/MF A01

An autocar, equipped with a number of different radiation measuring instruments was set in operation at various locations in Switzerland during the last two years. By using seven pyranometers movable with step-motors in any position this mobile system permits the determination of global radiation falling on arbitrarily orientated and inclined plane surfaces. The direct solar radiation on a normal surface was measured in the total spectrum, the three broad spectral ranges of the Schott filters OG1, RG2, and RG3 and also at 12 quasi-monochromatic wavelengths. Terrain properties and cloudiness distribution were recorded by a 180 deg (fish-eye)-camera. By these means also the diffuse radiation flux on 77 differently orientated and tilted planes was determined in several hundred cases for each plane. The dependence of the global and diffuse radiation intensities on solar height, atmospheric turbidity, cloudiness, terrain characteristics and on the orientation and inclination of the plane are discussed. Instruments for determining the intensity distribution of the radiation density over the sky hemisphere in the total spectrum as well as for spectral scanning in the sun's vertical to get the polarization parameters of sky radiation, are under construction. SOLAR ENERGY APPLICATIONS FOR THE ARID AREAS

Bertrand Chatel. *In WMO Solar Energy* 1977 p 219-225

Avail NTIS HC A99/MF A01

In April 1975, an inter-agency fact-finding mission visited some of the Sahelian countries to collect facts about possible applications of solar energy to solve the most urgent problems of drought stricken countries such as Senegal, Gambia, Mauritania, Upper Volta, Mali, and Niger. The mission found that useful applications could be developed, notably for pumping underground water and generating small outputs of electric power for villages. Other useful devices would include water heaters to replace the present burning of scarce wood for cooking, solar distillers, food dryers, and refrigeration equipment for food conservation and the cooling of buildings. The grinding of cereals by solar electricity would be a particularly useful labor-saving equipment. The Advisory Committee on the Application of Science and Technology to Development has urged the use of nonconventional sources of energy (solar, wind, and biological energy conversion) for many applications in developing countries. INFLUENCE OF SOLAR RADIATION AND RADIANT HEAT FLOW MEASUREMENT ERROR ON MEASUREMENT ACCURACY OF MATERIAL PHYSICAL CHARACTERISTICS IN SOLAR FURNACES

I N Frantsevitch, V S Dvernyakov, and V V Pasichny *In* WMO Solar Energy 1977 p 431-437 refs

Avail NTIS HC A99/MF A01

A solar furnace complex the Academy of Sciences of the Ukraine was used for the study of physical, mechanical, optical as well as some thermo-physical and physico-chemical properties of materials in temperature range from 180 C to 3500 K. The influence of solar radiation and heat flow measurement error at the focal spot on the physical properties are investigated. It is shown that based on an army searchlight with a 2 meter mirror, the measurement error of heat flows in the focal spot of a typical laboratory furnace is up to 15% to 20%. The calculation was carried out taking into account the guidance accuracy of the mirror, normal solar radiation measurements, the pattern position selected in relation to the focal spot, the accuracy of the calorimeter and measurement devices used, and other factors. In particular experimental data variability caused by the non-uniform structure of materials often surpasses measurement errors. While studying material and coating radiative characteristics that undergo phase transformation over a given temperature range, the experimental data variability also surpasses measurement error because of the surface instability. Some considerations on ways of reducing measurement error and on the influence on accuracy of atmosphere phenomenon experiments that change the radiation spectrum but are not recorded by the usual laboratory actinometer AT-50.

INTEGRATION OF INFRA-RED AMBIENT TEMPERATURE AND WIND CONDITIONS IN FLAT COLLECTOR PERFORMANCE PREDICTION

R Ployart, J Colomes, and B Devin *In* WMO Solar Energy 1977 p 438-449 refs

Avail NTIS HC A99/MF A01

The performance prediction of flat plate solar collectors is dependent on solar incidence angle, global radiation, and environmental conditions which determine the losses of the device. Extensive collector testing on solar simulator and curve fitting with physical models has shown the necessity to have infrared

radiation collector performance at any location. Pyrradiometers can be used for infrared measurements, but it has been shown that a more simple method could be used at weather stations to derive a figure representative of ambient conditions for flat plate collectors. This is a stagnation temperature of a specific glass window which integrates the influence of infrared, wind, and ambient temperature. Justification and use of this environment equivalent temperature in collector performance is given and the measuring device described.

SOLAR ENERGY APPLICATIONS IN UK BUILDINGS

R G Courtney *In* WMO Solar Energy 1977 p 450-458 refs

Avail NTIS HC A99/MF A01

Recent studies have shown that 40% to 50% of the UK energy consumption is used in buildings for heating, lighting, etc. Solar energy could assist in the provision of space and water heating and in the long term potentially cut energy consumption by 10% to 20%. The main characteristics of solar radiation in the UK are: (1) a high proportion (more than 50%) of diffuse radiation and (2) a large annual variation (10% to 1) in the energy received each month. These characteristics cause problems in the utilization of solar energy in buildings which are discussed. The economics of solar water heating - for which a small market exists in the UK - are briefly discussed and experimental projects in the use of solar energy for water and space heating purposes are described. These include: a water heating system in a school and three houses which have installed 40 sq m of collector panels, 20 sq m of collector panels and 36 cu m of hot water storage, and a solar air heat and heat pump. The latter two houses are under construction. Prospects for the widespread use of solar energy in UK buildings are discussed.

DESIGN AND ECONOMY OF SOLAR POWER PLANTS WITH INTEGRATED THERMAL ENERGY STORAGE

P V Gilli and G Beckmann *In* WMO Solar Energy 1977 p 498-506 refs

Avail NTIS HC A99/MF A01

Due to discrepancies of electric supply and demand patterns in solar steam power plants, energy storage - either integrated thermal energy storage (before generator) pumped hydro storage (after generator, before meter), or storage at the customer (after meter) - is required. Steam storage requires pressure vessels and is limited in temperature, but oil or fused salt are more expensive and require heat transfer equipment - and a temperature differential - for charging and discharging. It is claimed that the new technology of the Prestressed Cast Iron Pressure Vessel (PCIV) has shifted the economic balance in favor of steam storage, because due to the character of the PCIV cost function, higher pressures have become economically interesting and much larger units (of, for instance, 8000 cu m at a pressure of 60 bar) can be built. The PCIV leads to the development of new flow sheets for the integration of the thermal storage system into the plant. PCIV steam accumulators of the pressure-drop type and of the new expansion-type with flash evaporators are investigated. There is also a limited possibility for utilizing feed water storage. Cost data presented show that integrated steam storage by means of PCIV of the types considered is an attractive possibility for balancing electric supply and demand and thus for maximum utilization of insolation in solar steam power plants.

SOLAR DESALINATION STATUS AND POTENTIAL

Carlo Mustacchi and Vincenzo Cena *In* WMO Solar Energy 1977 p 507-518 refs

Avail NTIS HC A99/MF A01

Freshwater can be produced by means of solar energy at a cost of 1 to 17 \$/cu m with a margin of the order of 5% towards fossil-fired operation. This concerns plants having a nominal production of at least 50 cu m/hr and the multistage flash evaporator concept. For much smaller capacities, basin stills, at a cost of 2 \$/cu m, are a convenient low-technology solution. These margins will increase to 30% within the next ten years, and can even lead to better prospects provided that priority is given to the present bottlenecks of this technology, namely, increasing lifetime and reliability, designing an appropriate heat storage system, improving the dynamics of startup and shutdown for the plants. DIRECT CONVERSION OF SOLAR ENERGY INTO ELECTRICITY
M. Ali Kettani. In: WMO Solar Energy 1977. p. 539-549. refs

Avail. NTIS HC A99/MF A01

Possibilities of conversion of solar energy into electricity are considered namely: direct conversion, conversion through heat stage, conversion through a mechanical stage, and through a chemical stage. Four methods are discussed: the photovoltaic conversion, photoemissive conversion, photogalvanic conversion, and photomagnetic conversion. A material surface could absorb as much as 95 percent of solar energy and convert it into heat. The difference between input heat and the rejected heat could be converted into electricity directly or indirectly. In the direct case, thermo-electricity and thermionic processes are used. In the indirect case, heat engines and regenerative fuel cells can be considered. Solar energy can first be converted into mechanical or hydraulic energy before being converted into electricity. It can also be converted into chemical or biological energy or any other form. These different possibilities are analyzed and their potentialities discussed. Author (ESA)

STATUS REPORT ON THE DEVELOPMENT OF TERRESTRIAL SOLAR GENERATORS
E. F. Schmidt. In: WMO Solar Energy 1977. p. 570-580

Avail. NTIS HC A99/MF A01

The goal of utilization of solar energy as a competitive power source to cover considerable portions of power demand can only be met if the cost expenditure for solar-electric devices is kept to a minimum. When designing power supply systems, the following sub-system areas have to be considered: (1) development of low cost Si-base material, (2) development of technologies for manufacturing solar cells from different new types of base material, (3) development of low-cost generator modules by integrating solar cells mechanically and electrically, and (4) development and/or stimulation of development of electronic power conditioning and energy storage sub-systems. The market for terrestrial solar generators is surveyed. To study long-term environmental effects a solar generator of 1 kW is being manufactured and a test program is being carried out. The planned activities in development of terrestrial solar generators are surveyed. Author (ESA)

PROSPECTS OF POWER GENERATION FROM SOLAR PLANTS IN THE NORTH EAST OF BRAZIL
L. S. Cheema, Cleantho da Camara Torres, and Pío Caetano Lobo. In: WMO Solar Energy 1977. p. 581-590. refs

Avail. NTIS HC A99/MF A01

The prospects for the utilization of solar power plants in the north east of Brazil are studied for small communities removed from the power grid. The number of units that would be economically feasible depends on the price of plant per unit of installed capacity and the possibility of energy storage and subsidiary functions (distillation pumping) performed by the plant. Some solutions that may reduce the cost of plant and price targets that appear to be viable in the near future are considered. The most interesting applications of solar power plant lie in the low capacity range (up to 10 kW). This position derives from the fact that solar power cost per unit installed capacity is practically independent of unit size. Whereas in conventional plants the economics of scale apply, i.e. cost per unit installed capacity falls as the capacity of the plant increases. Based on the electricity power grid in the north east of Brazil, the maximum demand for small solar power plants given two different selling prices per unit of installed capacity is estimated. Areas in the north east of Brazil where the installation of solar power plants is considered possible are indicated. Author (ESA)

SMALL SCALE ELECTRIC POWER GENERATION BY MEANS OF A STATIONARY SPHERICAL REFLECTOR/TRACKING ABSORBER (SRTA) SOLAR COLLECTOR SYSTEM IN DEVELOPING COUNTRIES
F. Kreigh and J. F. Kreider. In: WMO Solar Energy 1977. p. 600-610. refs

Avail. NTIS HC A99/MF A01

The possibility of using large scale Spherical Reflector/Tracking Absorber (SRTA) solar collectors for generating electrical power in various parts of the world is investigated, with particular emphasis on developing countries. Large SRTA reflectors can be built with medium technology by using an approach similar to that employed in the construction of the 305 meter-diameter Arecibo Observatory in Puerto Rico. To test the proposed concept, an eight foot model of a stationary SRTA solar collector was built and the efficiency of the collector absorber system was determined experimentally at the NASA Goddard Space Flight Center. The collector is described, the experimentally measured thermal performance is compared with analytical predictions based on a simplified model and the experimental results of the scale model are extrapolated to the performance of a 10 and a 100 megawatt solar electrical power generation system. Several methods of construction for the large scale unit are proposed and possible combinations of the solar power plant with an oil or coal fired backup and a hydroelectric power station are described. Finally, estimates of the cost of solar electric power derived from an SRTA solar steam generator are presented for various parts of the world based on available solar insolation data. Author (ESA)

REALIZATION AND TESTING OF A PUMPING SYSTEM POWERED BY SOLAR CELLS
D. Campana, A. Castiel, A. Perez, J. A. Roger, C. Dupuy, P. Lavit, and M. Lepert. In: WMO Solar Energy 1977. p. 611-620

Avail. NTIS HC A99/MF A01

The possibilities for powering isolated pumping systems by solar energy are studied. Such systems would be suitable for example for providing water to remote farms or high-mountain sheep folds for irrigation of these remote lands and in general should be of interest in regions where electrical power transmission or transport of fuel oil is difficult or too expensive. Moreover, application in developed countries could avert pollution where it is a recognized problem. The study is based on an

average farm in Corsica and includes the following aspects: determination of the solar flux at the earth's surface based on meteorological data (statistics during four year) and the design of panels, determination of the mounting of the panels (total surface area, orientation, grouping, etc.), choice of a direct-current motor and pump to be operated directly by the panels according to the requirements of the well, tests of the assembly as a function of orientation of the panels and comparisons with theoretical models. Various possibilities for improving the system are discussed. Author (ESA)

THE THERMODYNAMICS OF SOLAR ENERGY CONVERSION

Gerd Blaesser. *In its Solar Energy* 1977 p 622-630 refs

Avail NTIS HC A99/MF A01

A unified thermodynamical description of converting systems for the utilization of solar energy is given. It is shown that the free energy function can be written approximately as the sum of two terms, of which the first, the spectral term, depends on the matching of the converter to the sun's spectrum, while the second, the concentration term, contains the effects of the concentration of the radiation by means of mirrors, etc. Theoretical (thermodynamical) efficiencies for some typical systems are derived within the frame of this general formalism and discussed as examples. PHOTOCHEMICAL HYDROGEN PRODUCTION THROUGH SOLAR RADIATION BY MEANS OF THE MEMBRANE PRINCIPLE

E Broda. *In WMO Solar Energy* 1977 p 631-637 refs

Avail NTIS HC A99/MF A01

Nuclear experts are considering a hydrogen economy where H_2 serves as a fuel to make electricity, as a chemical reactant, as a metallurgical reductant and as a source of food. Now H_2 could also be made by photolysis of water. Theoretically, a quantum of green light carries enough energy for the reaction $H_2O = H_2 + 1/2 O_2$. With long-wave light, photolysis could be achieved by combination of 2 quanta. Yet attempts to photolyze water, in presence of sensitizers (photocatalysts), have failed. In the last analysis, this is due to re-combination of the primary, highly reactive, products of the photochemical reaction. A solution of the problem is to be found by the spatial separation of the primary products, i.e. by development of suitable membranes where these products, and therefore also the stable gases H_2 and O_2 , come out on opposite sides. The feasibility of this membrane principle has been shown in Nature for 3 giga-years. Using membranes, all photosynthetic cells (photosynthetic bacteria and plants) succeed in the photo-production of a reductant (in many cases at least ferredoxin in the reduced form) with a redox potential equal to that of H_2 in neutral solution (-0.4 V). The reductant can, but need not, be used by the cells for CO_2 assimilation. In man-made technology, the reducing power would be diverted as H_2 . It is not suggested to use or copy living cells. Rather, their operation is to be studied so that technically useful membranes for water photolysis can be constructed abiotically. The scientific and practical aspects of large-scale photolytic H_2 production are discussed. Author (ESA)

INVESTIGATIONS ON SEMICONDUCTOR/ELECTROLYTE SOLAR CELLS AND THE QUESTION OF THE PHOTO-ASSISTED WATER DECOMPOSITION

W Gissler. *In its Solar Energy* 1977 p 638-647 refs

Avail NTIS HC A99/MF A01

The photovoltaic effect at semiconductor/electrolyte interfaces can be exploited for the construction of solar cells. Possible advantages and problems of such solar cells are discussed. The cells can work in a self-regenerative mode of operation converting

solar energy in electrical energy, and/or they can convert solar energy in chemical energy decomposing the electrolyte or compounds dissolved in it. Most attractive is the photo-assisted water decomposition, the conditions for which will be discussed. To demonstrate the feasibility, cells with different semiconductor/electrolyte combinations have been constructed and tested. In spite of simple electrode preparation techniques and the use of polycrystalline material, large quantum efficiencies could be obtained (85% for the cell $TiO_2/0.1\text{ M Na}_2SO_4/Pt$). Losses during the charge transfer can lead to a considerable reduction of the expected energy efficiency. Water decomposition could not be effected even with large band gap semiconductors and at high light intensities because the obtained cell voltages were smaller than the water decomposition voltage. Applying to the solar cell the missing voltage photo-assisted electrolysis could be performed. This process might be more effective than the self-regenerative mode of operation. Author (ESA)

THE QUANTITATIVE EVALUATION OF WOOD AS A SOURCE OF SOLAR ENERGY

Waldo E Smith. *In its Solar Energy* 1977 p 648-654 refs

Avail NTIS HC A99/MF A01

The waste wood from U.S. forest harvests is substantial, and in the face of the rapid depletion of the world's fossil fuels should be developed as a renewable energy source. Also, consideration should be given to the development of energy farms on which plants of high energy production can be grown as an annual or periodic crop on lands now largely lying idle. It would appear that by intensive endeavor the energy equivalent of two or three percent of current petroleum use within five years and over a longer period, these sources may have the energy equivalence of 25 to 30 percent of U.S. current petroleum usage. The sources considered are as follows: (1) trimmings in the conversion of logs to lumber and timber for use; (2) small trees and branches, twigs, etc.; (3) use of wastes from paper pulp production; (4) improvements in forest management including genetic control, and development of energy farms. THE EVALUATION OF OIL FOAM FOR USE AS A DISPLACING MEDIUM FOR OIL RECOVERY IN POROUS MEDIA
Ph D. Thesis

Hazim Hassan Al-Attar 1976 143 p

Avail Univ Microfilms Order No 78-02792

The displacement of oil by externally generated foam was tested for three foam qualities under 15 psi imposed pressure differential. Test results showed that oil recoveries observed by oil foam displacement were appreciably higher than those observed by gas drive. Gravity effects increased oil recovery by as much as 19 percent over the horizontal test. The plastic viscosity of oil foam was measured for three foam quality ranges; using a capillary tube. Foam viscosity was found to increase as the quality increased. Oil foams expressed non-Newtonian behaviors but low values of yield stress. The existence of foam in the flow tests was determined by gas breakthrough time, relative permeability calculations and theoretically by capillary tube representation of the porous medium. The theoretical results matched the experimental results when oil foam displaced oil and when oil displaced water. However, the results showed a discrepancy when gas displaced oil. Dissert Abstr

A high temperature-pressure, thermodynamic reference electrode was developed which was demonstrated to be operative in a simulated geothermal environment up to 250 C containing the contaminants that would affect its operation. An electrodeless conductivity probe was developed for use in the geothermal environment. The design is particularly resistant to the effects of scale deposition. The probe should be useful for measuring salinity, steam/brine ratios in two-phase flow, flashing point, and as a liquid-level control. A large number of sealing materials were investigated for use in the 250 C geothermal environment. The field test of the conductivity probe and reference electrode at East Mesa was a success. The conductivity probe successfully predicted the total dissolved solids content of the brine, and the redox probe data coupled with Pourbaix diagrams indicated FeS and FeS₂ as surface film present on the electrodes and test loop. Instantaneous corrosion rate methods were demonstrated to be easily set up and convenient to operate. ERA

The conclusion can be reached that these preliminary exploratory studies with both slurry and plasma/flame coatings indicate that laser surface fusion is useful in the deposition of corrosion/erosion coatings. This is supported by responses to initial inquiries regarding the state of laser technology and its applicability to this type of surface heat treatment. Further experimental work, literature reviews, and industry surveys are necessary. Nevertheless, it appears that sound coatings with controlled compositions can be produced effectively and economically. Furthermore, the process lends itself to self-repair and it appears that the current state-of-the-art will permit scaleup to large components. The program plan originally included an evaluation of slurry fusion techniques for the deposition of coatings as well as plasma and flame spray approaches. ERA

ON THE ECONOMIC OPTIMIZATION OF THE MAGNETO-HYDRODYNAMIC-STEAM POWER PLANT Ph D Thesis
James Nolen Chapman 1977 148 p
Avail Univ. Microfilms Order No. 7807683

A model of the entire plant is constructed such that, given a triple of input conditions: combustor pressure, air pre-heat temperature, and magnetic field strength, the thermodynamic properties, flow rates, and performance of the plant are calculated. Cost Estimating Relationships are developed so that capital costs can be estimated from the plant calculation. Then using a set of typical financial assumptions, the cost of electricity (COE) is calculated. With this model, COE is calculated for a variety of operating conditions. The conditions that give minimum COE are found. Based upon these conditions, a MHD generator is designed and the plant performance calculated for this optimum case. Finally, the sensitivity of the resulting optimum plant to variations in seed flow rate, coal price, and heat loss in the combustor is calculated. Dissert. Abstr.

Results are presented for a study of the preliminary design
of an alternate heat source assembly (HSA) intended for use in
the Brayton isotope power system (BIPS). The BIPS converts
thermal energy emitted by a radioactive heat source into electrical
energy by means of a closed Brayton cycle. A heat source heat
exchanger configuration was selected and optimized. The design
consists of a 10 turn helically wound Hastelloy X tube. Thermal
analyses were performed for various operating conditions to ensure
that post impact containment shell (PICS) temperatures remain
within specified limits. These limits are essentially satisfied for
all modes of operation except for the emergency cooling system
for which the PICS temperatures are too high. Neon was found
to be the best choice for a fill gas for auxiliary cooling system
operation. Low cycle fatigue life, natural frequency and dynamic
loading requirements can be met with minor modifications to
the existing HSA. B B

The Decade 80 solar house, located in Tucson, Arizona was
built to show the use of copper in home building and to
demonstrate the use of solar energy to provide space heating
and cooling and domestic hot water. The auxiliary energy sources
are electrical resistance heating for the domestic hot water and
a gas fired boiler for space heating and operation of the absorption
air conditioning units. The Semi-Annual report gives an over-
view of the instrumentation effort with the back-up monthly
reports reflecting more detail of the effort that went into the
implementation of the data acquisition system. G Y

Gregory B Hotchkiss Oct 1978 289 p refs
(NASA-TM-78929 E-9669) Avail NTIS HC A13/MF A01
CSCL 10A

Three experimental methods for evaluating the thermal
performance of flat-plate solar collectors are presented. The
methods are classified according to the nature of the ambient
conditions encountered during experimental testing. The classifica-

tions are (1) steady state (2) quasi-steady state and (3) unsteady state. Experimental tests on two solar collectors were conducted in an indoor solar simulator and also out-of-doors. From the experimental collector data collector efficiency factors, which describe the steady state behavior of a collector, were determined for each experimental method. A parameter identification method based upon a discrete gradient optimization technique was used to determine the collector parameters from unsteady state data. Such a method would allow on-line data reduction and would enable speedy determination of the collector efficiency factors from transient data. The design, construction and operation of the test rig which was used to obtain the experimental data are also described. Author

AN OVERVIEW OF THE ENERGY SITUATION

Donald R Pitts. In NASA Langley Res Center. Emerging Energy Alternatives for the Southeastern States. 1978. p. 7-18.

Avail NTIS HC A07/MF A01 CSCL 10A

Beginning with a historical review of the domestic pattern of energy usage, the current dependence of the United States upon dwindling petroleum resources is examined. The possible limit of petroleum usage is discussed, and recent oil production trends are presented. Coupling these with projected analyses of OPEC oil productive capability in the early 1980's indicates a serious worldwide as well as American energy problem in the next decade. The need for conservation and rapid development of application of alternative energy resources is discussed including quantitative projections of significant conservation efforts as well as estimates of domestic alternative energy resource capabilities. WOOD ENERGY-COMMERCIAL APPLICATIONS

Robert P Kennel. In NASA Langley Res Center. Emerging Energy Alternatives for the Southeastern States. 1978. p. 27-38. refs.

Avail NTIS HC A07/MF A01 CSCL 10A

Wood energy is being widely investigated in many areas of the country because of the many obvious benefits of wood fuel such as the low price per million Btus relative to coal, oil, and

gas, the wide availability of noncommercial wood and the proven ability to harvest it, established technology which is reliable and free of pollution, renewable resources, better conservation for harvested land, and the potential for jobs creation. The Southeastern United States has a specific leadership role in wood energy based on its established forest products industry experience and the potential application of wood energy to other industries and institutions. Significant questions about the widespread usage of wood energy are being answered in demonstrations around the country as well as the Southeast in areas of wood storage and bulk handling, high capitalization costs for harvesting and combustion equipment, long term supply and demand contracts, and the economic feasibility of wood energy outside the forest products industry. IMPACT OF NOVEL ENERGY SOURCES: OTEC, WIND, GEOTHERMAL, BIOMASS

A Sidney Roberts, Jr. In NASA Langley Res Center. Emerging Energy Alternatives for the Southeastern States. 1978. p. 39-57. refs.

Avail NTIS HC A07/MF A01 CSCL 10A

Alternate energy conversion methods such as ocean thermal energy conversion (OTEC), wind power, geothermal wells and biomass conversion are being explored, and re-examined in some cases, for commercial viability. At a time when United States fossil fuel and uranium resources are found to be insufficient to supply national needs into the twenty-first century, it is essential to broaden the base of feasible energy conversion technologies. The motivations for development of these four alternative energy forms are established. Primary technical aspects of OTEC, wind, geothermal and biomass energy conversion systems are described along with a discussion of relative advantages and disadvantages of the concepts. Finally, the sentiment is voiced that each of the four systems should be developed to the prototype stage and employed in the region of the country and in the sector of economy which is complementary to the form of system output. HOW MUCH ENERGY DOES ENERGY COST?

Warren D Devine, Jr /n NASA Langley Res Center Emerging Energy Alternatives for the Southeastern States 1978 p 117-134 refs

Avail NTIS HC A07/MF A01 CSDL 10A

Estimating the energy cost of producing and delivering an energy product involves the quantitative determination of all relevant energy flows and the aggregation of these flows into meaningful indices of system performance. Five emerging energy technologies are subjected to energy analysis. The energy delivered by each is substantially greater than the energy consumed during construction and lifelong operation of the system. Net energy analysis can provide interesting and perhaps useful information regarding specific technologies, but it does not necessarily provide additional information essential to the making of decisions regarding those technologies. ECONOMIC STUDIES OF COAL GASIFICATION: COMBINED CYCLE SYSTEMS FOR ELECTRIC POWER GENERATION Final Report

K Chandra, B McElmurry, E W Neben, and G E Pack Jan 1978 459 p refs Sponsored by EPRI
(EPRI Proj 239)

(EPRI-AF-642) Avail NTIS HC A20/MF A01

The objective was to identify whether significant economic and/or environmental incentives exist for using such systems compared to the current practice of direct coal firing and stack gas cleanup. The processes studied included the Lurgi dry ash gasifier, the British Gas Corporation slagler and three entrained-bed processes. All these processes were integrated with combined-cycle plants based on advanced gas turbine technology (2,400 F combustion outlet) estimated to be available in the 1981-1985 time period. The evaluations were based on complete grass-roots facilities sized to conform to the present electric utility practice of building units of approximately 1,000-MW capacity. It is concluded that several of the processes considered are potentially attractive and are or can be, available for commercialization during the next decade. ERA

UTILIZATION OF ENERGY INFORMATION REQUIREMENTS FOR POLICY

Kenneth C Hoffman Nov 1977 32 p refs Presented at the Workshop on Energy Inform., Stanford, Calif., 15-16 Dec 1977 (Contract EY-76-C-02-0016)

(BNL-23643, Conf-771226-1) Avail NTIS HC A03/MF A01

An integrated approach involving the use of aggregated energy-economic data, as well as more detailed data at the activity level involving the characterization of specific energy utilization processes in the residential, commercial and industrial sectors is outlined. Such information goes beyond the traditional treatment of resources utilization and delivered fuels to incorporate the concepts of energy services delivered and of the direct plus indirect energy content of goods and services that are consumed. The present situation is, therefore one of transition from a period where analysis was governed by the availability of data to one where information must be developed to support the needs of policy analysis. The current information base is summarized and recommendations are made for the future development of an information base and analytical capability that will support energy-utilization policy analysis. COMMERCIAL ENERGY USE A DISAGGREGATION BY FUEL, BUILDING TYPE, AND END USE

Jerry R Jackson and William S Johnson Feb 1978 94 p

(Contract W-7405-eng-26)

(ORNL/CON-14) Avail NTIS HC A05/MF A01

The development of detailed estimates of energy use in the commercial sector is described. The level of detail includes five end uses, four fuel types, and ten commercial subsectors. Energy use estimates for each of the 200 components are developed for the years 1965 to 1975. Trends in commercial energy use by fuel type and end use are presented, energy use estimates disaggregated by building type, fuel, and end use are presented for 1970 and 1975. The three distinct tasks required to develop these estimates are presented in detail. The first task includes reviewing, analyzing, and interpreting data on commercial energy use to reflect consistent commercial sector coverage. Floor space stock estimates are developed in the second task. In the third step, information on relative energy use by building type is synthesized from studies of individual buildings and is used, along with aggregate fuel and floor space estimates, to calculate detailed energy use by subsector and year. CHOICES IN THE NEXT ENERGY AND SOCIAL REVOLUTION

Charles J Ryan 7 Jul 1977 28 p

(Contract EX-76-A-01-2195-028)

(TID-28197) Avail NTIS HC A03/MF A01

As fossil fuels the energy source of industrialization, are depleted, the world enters into the third most important energy and social revolution in the development of civilization. Natural and social systems operate under the same principles of energy management. The evolution of civilization over more than a million years can be seen as a successful quest to control greater amounts of energy through social organization in three different energy and social systems: hunting and gathering, agriculture, and fossil fuels. The energy perspective of the paper suggests the relationship between continuous growth and social discontinuity in U.S. history. The physical and social consequences of future energy alternatives are discussed in terms of an Orwellian, Jeffersonian, and Malthusian type future (The Third Revolution: Orwell, Jefferson, or Malthus). The paper concludes with an endorsement of solar energy as the alternative most likely to afford a stable future in a humanly organized environment. ERA

HEAT STORE FOR SOLAR ENERGY UTILIZATION IN HEATING SYSTEMS AND WATER HEATING

A Abhat May 1977 25 p In GERMAN Presented at the Energy Policies Forum of the Landesregierung, Stuttgart, 9 May 1977

(IKE-5-206, Conf-770592-4) Avail NTIS HC A02/MF A01

After a survey of the main parameters for heat store construction, a new latent-heat store concept is described which takes account of the experience with stores in existing solar houses. The new concept is based on a modular construction. Each module has a finned heat pipe partitioned into 3 compartments (store space, heat source region, and heat sink region). The space between the fins is filled with a storage material which changes from the solid to the liquid phase when heat is added. The test model was operated with paraffin and wax ester. Finally, a proposal is made for an integration of the latent-heat store concept into a solar space and water heating system. ERA

CLOSED-CYCLE, HIGH-TEMPERATURE CENTRAL RECEIVER CONCEPT FOR SOLAR ELECTRIC POWER Final Report

Jan 1978 279 p refs

(EPRI Proj 377-1)

(EPRI-ER-629) Avail NTIS HC A13/MF A01

The technical feasibility of a high-temperature central receiver in a solar plant employing closed-cycle helium as a heat transport fluid was examined in terms of system life, efficiency, cost, and technology requirements. These considerations were implemented in the conceptual design of a receiver and its components for utilization in a solar plant of 100 megawatts of electrical power output. The rationale is provided that supports the configuration, equipment arrangement, and material choices. Thermal cycling tests simulating 30-year lifetime of the receiver's heat exchangers at temperatures to 816 C and at 500 psi helium pressure, confirmed material choices. Preliminary design considerations are presented for a 1 megawatt thermal test receiver and for a 10 megawatt electrical pilot plant. Also, a system/supporting-subsystem definition is presented for employing the central receiver design in a solar plant. This includes conceptual design of several thermal energy storage devices and their integration into plant operation. ERA

GOVERNMENTAL COSTS AND REVENUES ASSOCIATED WITH GEOTHERMAL ENERGY DEVELOPMENT IN IMPERIAL COUNTY

G Goldman and D Strong Oct 1977 80 p refs

(Contract W-7405-eng-48)

(UCRL-13800, Publ-13800) Avail NTIS HC A05/MF A01

The cost and revenue impacts to local governments of three geothermal energy growth scenarios in Imperial County were estimated. The level of geothermal energy potential for the three development scenarios tested is 2,000, 4,000 and 8,000 MW, enough power to serve 270,000 to 1,000,000 people. The analysis of the three growth scenarios tested indicates that county population would increase by 3.7 and 19 percent and assessed values would increase by 20, 60, and 165 percent for Alternatives No. 1, No. 2 and No. 3 respectively. Direct and indirect effects would increase new jobs in the county by 1,000, 3,000 and 8,000. Government revenues would tend to exceed public service costs for county and school districts, while city costs would tend to exceed revenues. In each of the alternatives, if county, cities and school districts are grouped together, the revenues exceed costs by an estimated \$1,600 per additional person either directly or indirectly related to geothermal energy development in the operational stages. Avail NTIS HC A02/MF A01

The installation of a network of air quality stations for characterizing the air quality and atmospheric transport properties in the valley prior to development is discussed. Analyses of geothermal fluids for various gases were performed to evaluate the potential emission rates from future geothermal power plants. The principal pollutant of concern was H₂S because of its noxious odor and potential release rate. These estimated source emission rates and the appropriate meteorological measurements were used as input to a three dimensional, atmospheric transport code to estimate the potential changes in air quality that result from various scenarios for development of geothermal power. APPLIED RESEARCH ON ENERGY STORAGE AND CONVERSION FOR PHOTOVOLTAIC AND WIND ENERGY SYSTEMS. VOLUME 3: WIND CONVERSION SYSTEMS WITH ENERGY STORAGE Final Report

27 Sep 1977 330 p refs Sponsored by DOE

(Grant NSF C-75-22221)

(TID-28287/3) Avail NTIS HC A15/MF A01

Wind energy conversion systems and their use of energy storage are studied by the assessment of selected candidate storage concepts, and by evaluation of the effects of selected parameters on the attractiveness and worth of energy storage utilization. The scope of the investigations included both utility and non-utility applications. In addition to establishing cost goals for storage, the impact of charging storage from multiple sources, as well as from wind systems alone, was included, along with the effects of wind forecasting and transient smoothing of the wind system output. ECONOMICS OF THE ATTACHED SOLAR GREENHOUSE FOR HOME HEATING

C D Kolstad 1978 12 p refs Presented at the 2d Natl Conf and Exhibition on Technol for Energy Conserv., Albuquerque, New Mex., 23-27 Jan 1978
 (Contract EY-76-C-04-0789)
 (LA-UR-22, Conf-780109-5) Avail NTIS HC A02/MF A01

For several years, passive solar heating was considered to be very attractive for home heating in the U.S. Unfortunately passive systems are not as easily analyzed as active systems from an engineering and economic performance point of view. This problem is addressed, and an economic assessment of the solar greenhouse is given. Using simple heat balance analysis, a greenhouse performance model was developed for assessing heat available for home space conditioning from an add on solar greenhouse. This forms the basis for an engineering economic model for assessing the economic viability of the add on solar greenhouse for home heating. Model variables include climate factors, local costs, alternate fuels and system size. The model is then used to examine several locations in the U.S. for the economic attractiveness of the add on solar greenhouse for space heating. ERA

BIOLOGICAL CONVERSION OF BIOMASS TO METHANE

J T Pfeffer Jan 1978 6 p
 (Contract EY-76-S-02-2917)
 (COO-2917-7) Avail NTIS HG A02/MF A01

Complete-mix and multistage reactors are evaluated for use in the anaerobic fermentation of organic solids for methane production. Results indicate that if a balanced population of organisms is maintained in the initial stage, multi-stage fermentation is more efficient than a complete-mix system. However, if the system is stressed, failure of the multi-staged system is more rapid. When the first stage was not inhibited due to a short retention time, the waste stabilization in the additional stages was minimal. Further studies on the effect of retention time on reaction rates indicated that the type of reactor design desired depends upon the objective of the system. A staged system will produce more methane per unit volume of reactor for a given quantity of solid substrate. Maximal methane production, per unit volume is obtained by a single-stage reactor operating at near minimum retention. Results of studies on the fermentation of manures and corn stover are discussed briefly. ERA

PROGRESS ON COAL-DERIVED FUELS FOR AVIATION SYSTEMS

Robert D Witcofski In: ITS CTOL Transport Technol., 1978 1978

p 927-950 refs

Avail NTIS HC A18/MF A01 CSCL 21D

The results of engineering studies of coal-derived aviation fuels and their potential application to the air transportation system are presented. Synthetic aviation kerosene (SYN JET-A), liquid methane (LCH4) and liquid hydrogen (LH2) appear to be the most promising coal-derived fuels. Aircraft configurations fueled with LH2, their fuel systems, and their ground requirements at the airport are identified. Energy efficiency, transportation hazards, and costs are among the factors considered. It is indicated that LCH4 is the most energy efficient to produce, and provides the most efficient utilization of coal resources and the least expensive ticket as well. J M S

A MECHANISM FOR ULTRALOW INTERFACIAL TENSION IN SYSTEMS CONTAINING MICROEMULSIONS: THEORETICAL CONSIDERATIONS AND EXPERIMENTS WITH ULTRACENTRIFUGE Ph.D. Thesis

Rei-Nan Hwan 1978 131 p

Avail Univ Microfilms Order No. 78-11503

A theory of ultralow interfacial tensions and their relation to phase separation in micellar solution was developed. The theory predicted that interfaces having very low tensions can be produced when a micellar solution separated into a micelle-rich and a micelle-lean phase. For phase separation to occur under reasonable

conditions, the micelles must contain enough solubilized oil or water to be about 100 Å in diameter or larger. The conditions for phase separation and the composition of the phases in equilibrium were also predicted by the theory. Interfacial tension was calculated by adapting Cahn and Hilliard's approach. Results showed that interfacial tensions can be 0.1 dyne/cm or lower even when the system is far from a consolute point. Predictions of the theory were in general agreement with the data of Healy et al. on low interfacial tensions in oil-water systems with a synthetic petroleum sulfonate surfactant. Dissert. Abstr.

SYNTHETIC OIL FROM COAL. THE ECONOMIC IMPACT OF FIVE ALTERNATIVES FOR MAKING HYDROGEN FROM COAL Final Report

H F Moore, E T Kim, and R I Kermode Jan 1978 85 p refs. Sponsored in part by Ashland Oil, Inc., Ky

(Grant NSF AER-73-03259-A03)
(PB-279322/2, IMMR33-PD20-78) Avail NTIS HC A05/MF A01 CSCL 07A

This study evaluated the effect of several hydrogen production configurations on the cost of syncrude produced by a general catalytic liquefaction process. The five cases analyzed were: partial oxidation of coal at 44.7 500, and 1000 psia; partial oxidation of char at 1000 psia; and, partial oxidation of process-derived vacuum bottoms at 1000 psia. Material balances for all cases.

were based on a total coal consumption of 25,000 tons per stream day (TPSD) This study showed that increasing the pressure of partial oxidation 44.7 to 1000 psia reduced the oil cost by 10 percent This incremental savings in going from 500 to 1000 psia was only two percent, which may make this increase marginal GRA

COMPUTER SIMULATION OF NON-DARCY TWO-PHASE FLOW IN OIL RESERVOIRS Ph D Thesis
 Sif-el Kamel Kadi 1977 101 p
 Avail Univ Microfilms Order No 78-05699

A study of computer simulation was extended to single-phase oil and to two-phase (oil and gas) non-Darcy flow with emphasis on the inflow performance relationship (IPR) The research considers the following (1) the pressure behavior of black oil non-Darcy flow (2) two-phase non-Darcy flow behavior in a solution-gas drive reservoir pressure and saturation were investigated, (3) flow-afterflow tests above and below the saturation pressure in a solution-gas drive reservoir with formation damage or improvement around the wellbore Analysis of the numerical results reveals that the oil non-Darcy pressure

drawdown behaves like water non-Darcy pressure drawdown as investigated by fluid dynamists moreover it also behaves like pressure drawdown in gas wells with turbulent flow The formation flow capacity indicates the non-Darcy flow induces a skin which is rate dependent Dissert Abstr

GEOTHERMAL RESERVOIR CATEGORIZATION AND STIMULATION STUDY

Harold L. Overton (CER Inc.) and Robert J. Hanold Jul 1977
 62 p refs
 (Contract W-7405-eng-36)
 (LA-6889-MS) Avail NTIS HC A04/MF A01

Analyses of the fraction of geothermal wells that are dry indicate that geothermal reservoirs can be fitted into four basic categories: (1) Quaternary to late Tertiary sediments, (2) Quaternary to late Tertiary extrusives, (3) Mesozoic or older metamorphic rocks, and (4) Precambrian or younger rocks. Failure of geothermal wells to flow economically is due mainly to low permeability formations in unfractured regions. It is the high stress/low permeability category that is most amenable to artificial stimulation by hydraulic fracturing, propellant fracturing, or chemical explosive fracturing. Category (1) geothermal fields are not recommended for artificial stimulation because these younger sediments almost always produce warm or hot water. Most geothermal fields fit into category (2) and in certain cases, possess some potential for stimulation. The Geysers is a category (3) field, and its highly stressed brittle rocks should make this site amenable to stimulation by explosive fracturing techniques. Roosevelt Springs, UT, well 9-1 is in category (4) and is a flow failure. It represents a prime candidate for stimulation by hydraulic fracturing. ERA

ESTIMATING ENVIRONMENTAL DAMAGES FROM SURFACE MINING OF COAL IN APPALACHIA: A CASE STUDY Final Report

Alan Randall, Orlen Grunewald, Angelos Pagoulatos, Richard Aussen, and Sue Johnson Jan 1978 143 p refs
 (Contract EPA-68-01-3586)
 (PB-279150/7, EPA-600/2-78-003) Avail NTIS HC A07/MF A01 CSCL 081

The value of environmental damage from surface mining for coal was estimated under four alternative regulatory regimes: (1) the existing regulations, (2) a 'no regulations' regime, (3) a regulatory regime similar to that which would be established by

a Federal surface mining and reclamation bill, and (4) an alternative regulatory framework generated by the research team, which relies more heavily on economic incentives for damage prevention and reclamation. Aesthetic damage, deterioration of water quality for domestic, commercial, and industrial uses, damages from increased floodings, damage to land and buildings, and damage to fish, wildlife, and recreation-related activities are determined. THERMAL REGIMES OF THE MISSISSIPPI AND MISSOURI RIVERS DOWNSTREAM FROM THE SOUTHERN IOWA BORDER

A. R. Giaquinta and Titus T. C. Keng Jan 1978 202 p refs
 Sponsored in part by Office of Water Res. and Technol.
 (PB-279470/9, IHR-211) Avail NTIS HC A10/MF A01 CSCL 08H

The steady state version of the Iowa Thermal Regime Model (ITRM), a numerical model for the calculation of streamwise temperature distributions in rivers, was used to determine the existing and future thermal regimes of the Mississippi and Missouri Rivers downstream from the southern Iowa border. The basic equations governing the conservation of thermal energy in a free surface flow were reviewed, and the numerical model is presented. The empirical equations used to compute various heat transfer quantities are listed. The natural thermal regimes and the modified thermal regimes resulting from the imposition of external heat loads from power plants and other sources were calculated, and results are shown in the form of temperature distributions along the rivers for each case studied. GRA

SOLID POLYMER ELECTROLYTE (SPE) FUEL CELL TECHNOLOGY PROGRAM Final Report
 15 Mar 1978 88 p
 (Contract NAS9-15286)
 (NASA-CR-151750 TPR-047) Avail NTIS HC A05/MF A01 CSDL 22A

Many previously demonstrated improved fuel cell features were consolidated to (1) obtain a better understanding of the observed characteristics of the operating laboratory-sized cells, (2) evaluate appropriate improved fuel cell features in 0.7 sq ft cell hardware, and (3) study the resultant fuel cell capability and determine its impact on various potential fuel cell space missions. The observed performance characteristics of the fuel cell at high temperatures and high current densities were matched with a theoretical model based on the change in Gibbs free energy voltage with respect to temperature and internal resistance change with current density. Excellent agreement between the observed and model performance was obtained. The observed performance decay with operational time on cells with very low noble metal loadings (0.05 mg/sq cm) were shown to be related to loss in surface area. Cells with the baseline amount of noble catalyst electrode loading demonstrated over 40,000 hours of stable performance. A R H

THERMAL ENERGY STORAGE FOR INDUSTRIAL WASTE HEAT RECOVERY
 H. W. Hoffman (ORNL), R. J. Kedl (ORNL) and R. A. Duscha Aug 1978 10 p. Presented at 13th Intersociety Energy Conversion Engineering Conf., San Diego, Calif. 20-25 Aug 1978
 (Contracts EC-77-A-31-1034 W-7405-eng-26)
 (NASA-TM-78953 DOE/NASA/1034-78/2, E-9702) Avail NTIS HC A02/MF A01 CSDL 10C

The potential is examined for waste heat recovery and reuse through thermal energy storage in five specific industrial categories: (1) primary aluminum, (2) cement, (3) food processing, (4) paper and pulp, and (5) iron and steel. Preliminary results from Phase 1 feasibility studies suggest energy savings through fossil fuel displacement approaching 0.1 quad/yr in the 1985 period. Early implementation of recovery technologies with minimal development appears likely in the food processing and paper and pulp industries. Development of the other three categories though equally desirable will probably require a greater investment in time and dollars. L S

(HCP/M4007-01) Avail NTIS HC A08/MF A01

A plan is provided for the Energy Research and Development Administration (ERDA) and in particular the four regional solar energy centers (RSECs) to establish a workable program for increasing the commercial market penetration of available solar technology for space conditioning and water heating. It is recommended that these centers concentrate their commercializing efforts on the building industry. This can be done by establishing a network of small local solar energy applications centers (SEACs) within the four regions to provide on-going assistance and education to members of the industry and their consumers. The present state of the solar energy industry are discussed. The problems faced in the commercialization of solar energy technology, particularly by the building industry are discussed. The programs that these SEACs will need to undertake are described in detail. GY

(EPRI-EM-570) Avail NTIS HC A08/MF A01

The hydrogen fuel-cell power plant is expected to become a commercial reality in the near future. The fuel processor which converts hydrocarbon feedstocks to hydrogen is an integral part of this system. Fuel-cell power systems presently being developed are capable of utilizing methane through light naphthas for this purpose; however, a reasonable fuel-cell market will require the use of a number of fuels ranging from synthesis gas to distillate oils. In this context No. 2 fuel oil is of particular interest. The present study focuses on hydrogen production technologies for dispersed fuel-cell power stations, using a No. 2 fuel-oil feedstock. The primary objective is to provide a perspective for the feasibility of efficiently converting this feed to hydrogen in a fuel processor which is integrated with the dispersed power station. The approach involved a comprehensive review and analysis of existing, emerging and conceptual hydrogen production technologies. Of the processes considered, high-temperature steam reforming (both fixed and fluidized catalytic beds) and autothermal reforming are the more promising fuel-processing alternatives. ERA

Resource assessment activities consist of those conducted by USGS in Denver and the outcrop study of the eastern Uinta Basin. Some base maps are complete and field investigations in the principal areas of interest are being conducted. Laboratory R and D activities funded by ERDA have been directed toward new tools and instrumentation systems, rock mechanics experiments, mathematical modeling and data analysis. Many items are arbitrarily reported in this category and in the section devoted to the laboratories and Energy Research Centers even though they require considerable field experimentation. The positive results of system development and data analysis techniques in determining fracture orientation have been very encouraging. The Uinta Basin in Utah and Piceance Basin in Colorado have had seven massive hydraulic fracture (MHF) experiments in the Upper Cretaceous tight gas formations. ERA

CURRENT STATUS OF COMPOSITE FLYWHEEL DEVELOPMENT

Richard H Toland 17 Jan 1978 23 p refs Presented at the 23d Natl SAMPE Symp, Anaheim, Calif, 1-4 May 1978 (Contract W-7405-eng-48) (UCRL-80604, Conf-780502-4) Avail NTIS HC A02/MF A01

Recent developments in the applications of fiber composite materials to flywheel energy storage systems are reviewed. The impact of these materials on flywheel energy storage is discussed in relation to transportation systems specifically the performance requirements and the effect of system constraints on the ultimate effectiveness of the composite rotors. General flywheel design concepts are discussed in light of several performance criteria and the inherent design and material limitations including those effecting reliability and life. Specific composite rotors that were built and tested are discussed in terms of their demonstrated performance and are assessed for their potential. Recent government-sponsored research and development programs also are briefly reviewed and recommendations are made for future work. ERA

SLAGGING MHD GENERATOR A PARAMETRIC STUDY

John G Taylor 1977 30 p refs Presented at the 17th Symp on Eng Aspects of MHD Stanford Calif 27 Mar 1978 (Contract EY-76-C-04-0789) (SAND-77-1951) Avail NTIS HC A03/MF A01

The design and performance of a direct coal fired MHD generator depends on the effect the liquid slag layer has on the fluid dynamic heat transfer and electrical characteristics of the generator. A simplified self consistent analysis of the slagging MHD generator is presented. A detailed study of the interaction between the turbulent gasdynamic boundary layer and the condensing slag layer in the presence of electrodynamic forces was initiated. The vapor condensation for a laminar boundary layer flow over infinitely segmented Faraday connected electrodes in the entrance region of the generator was examined. Simply stated a mixture of a condensable vapor (slag) and a noncondensable gas (seeded coal combustion products) flows through an MHD channel with wall temperatures below the condensation temperature of the vapor. The vapor condenses on the walls creating a liquid slag layer. ERA

THE AIR QUALITY AND OIL SPILL IMPLICATIONS OF

ALASKAN OIL IMPORTATION INTO SOUTHERN CALIFOR- NIA Ph D Thesis

Stephen Wayne Kahane 1978 253 p
Avail Univ Microfilms Order No 7811357

The proposed siting of the Standard Oil of Ohio (SOHIO)
marine terminal and storage facilities in Long Beach, California
was discussed The SOHIO the company with the largest share
of Alaskan oil proposes to transship approximately
500,000 barrels/day of Alaskan oil through the Port of Long
Beach The air quality impacts of the proposed SOHIO project
were determined to be of particular concern because of their
potential contribution to further deterioration of ambient air quality
in an already polluted air basin The air pollutant emissions
associated with each of the various activities and operations of
the marine terminal were identified, characterized and discussed
Various operational scenarios were then developed to estimate
emissions during both routine and emergency conditions

Decision making in early transportation planning must be responsive to complex value systems representing various policies and objectives. The assessment of alternative transportation concepts during the early initial phases of the system life cycle, when supportive research and technology development activities are defined, requires estimates of transportation, environmental, and socio-economic impacts throughout the system life cycle, which is a period of some 40 or 50 years. A unified methodological framework for comparing intercity passenger and freight transportation systems is described and is extended to include the comparison of long term transportation trends arising from implementation of the various R & D programs. The attributes of existing and future transportation systems are reviewed in order to establish measures for comparison, define value functions and attribute weightings needed for comparing alternative policy actions for furthering transportation goals. Comparison criteria definitions and an illustrative example are included. ARH

INDUCTIVE POWER COUPLING FOR AN ELECTRIC HIGHWAY SYSTEM

J G Bolger F A Kirsten, and L S Ng Jan 1978 10 p ref
Presented at the IEEE Vehicular Technol Conf Denver 24 Mar 1978

(Contract W-7405-eng-48)
(LBL-7262 Conf-780303-2) Avail NTIS HC A02/MF A01

A dual mode electric transportation system is described in which energy is electromagnetically transferred from a powered roadway to moving vehicles. Energy from the roadway can be used for high-speed long-range travel and for replenishing energy

stored in the vehicle in batteries or flywheels. The stored energy is then available for short-range travel off the powered highway network. The power coupling between roadway and vehicle is functionally similar to a transformer. A source is embedded in the roadway flush with the surface. When the vehicle's pickup is suspended over the source, energy is magnetically coupled through the clearance air gap between pickup and roadway source. The electromagnetic coupling mechanism was extensively studied through computer models, circuit analyses, and by tests of a full-size physical prototype. The results of these tests are described. STATISTICAL ANALYSIS AND PLANNING OF MULTIHUNDRED-WATT IMPACT TESTS

H. F. Martz, Jr. and M. S. Waterman. Oct 1977. 16 p. refs. (Contract W-7405-eng-36)

(LA-6886-MS) Avail NTIS HC A02/MF A01

Modular multihundred watt (MHW) radioisotope thermoelectric generators (RTG's) were used as a power source for spacecraft. Due to possible environmental contamination by radioactive materials, numerous tests were required to determine and verify the safety of the RTG. There are results available from 27 fueled MHW impact tests regarding hoop failure, fingerprint failure, and fuel failure. Data from the 27 tests were statistically analyzed for relationships that exist between the test design variables and the failure types. Next, these relationships were used to develop a statistical procedure for planning and conducting MHW impact tests or similar tests on other RTG fuel sources. ERA

MATERIALS PROBLEMS IN SOLAR, NUCLEAR, AND STORAGE OF ENERGY

R. S. Claassen. 1978. 29 p. Presented at the 5th Energy Technol. Conf., Washington, D. C., 27 Feb 1978.

(Contract EY-76-C-04-0789)

(SAND-78-0354C) Avail NTIS HC A03/MF A01

Developing energy technologies place increasing demand on material performance and in some cases exceed known material capabilities. Material choices in solar energy systems are dominated by cost. Distributed collectors and the central receiver illustrate practical problems. The demand for absolute safety in nuclear power requires a depth of understanding and level of knowledge about materials unachieved in previous engineering systems. Problems in water-cooled and breeder reactors emphasize the point. Fusion reactors will push far beyond our present knowledge of material response and behavior. Within limits, energy storage is practical today but present technologies such as batteries are being pushed hard and new schemes such as superconducting solenoids and thermochemical storage are under intense study. The corrosion resistance of aluminum alloys in water/ethylene glycol mixtures was studied in detail under experimental conditions directly relevant to the operation of existing solar thermal energy collector systems. An aqueous ethylene glycol solution with 35% ethylene glycol by volume was chosen as the typical heat transfer medium throughout the entire program. The scope of this study covers the following range of conditions: (1) four different aluminum alloys (i.e., 99.9%, 1100, 3003 and 3004 series aluminum), (2) 70 to 210 F., (3) stagnant solution, laminar and turbulent flow, (4) under N₂ and air, (5) in the presence of contaminants (e.g., Cl⁻, Cu²⁺ and Fe³⁺ ions), and (6) effects of ethylene glycol decomposition products. The linear polarization resistance technique was used in determining the overall corrosion rate, along with accompanying quantitative metallographic analysis of pit formation and growth. ERA

Alloys which resist corrosive coal gasification atmospheres better than existing high temperature alloys such as 310 stainless steel and Ni-Cr binary alloys were investigated. Minor alloying elements were added to existing high temperature alloys which form protective sulfide layers or improved oxide layers in addition to or in place of the usual oxide layer. The protective layers should be spall resistant under the thermal and mechanical cycling conditions encountered in coal gasifiers and be self-healing, in case of failure by cracking or erosion. The level of alloying additions was adjusted to maximize corrosion resistance while at the same time minimize deleterious effects on mechanical properties and fabricability. ERA

SUMMARY OF VARIABLE DISPLACEMENT ENGINE PROJECT

C W Robinson In DOE Highway Vehicle Systems Mar 1978 p 67-73

Avail NTIS HC A20/MF A01

A variable displacement five cylinder, spark ignition research engine was designed fabricated and tested This design reduced partial load fuel consumption by reducing throttling and friction losses Power was controlled by changing the piston stroke rather than by throttling except at idle and very low power levels A linkage arrangement allowed for continuous changes in stroke and, therefore in engine displacement The prototype has a bore of 3.375 inches and stroke varies from 1 to 4-1/4 inches as displacement varies from 43 to 190 cubic inches The linkage concept was such that clearance volume could be changed in proportion to the stroke Nearly constant compression ratio could be achieved, or (by proper selection of the linkage dimensions) compression ratio could be tailored to optimize the design

THERMAL ENERGY STORAGE/HEAT ENGINE FOR
HIGHWAY VEHICLE PROPULSION**

L R Folsom In DOE Highway Vehicle Systems Mar 1978 p 286-303 refs

Avail NTIS HC A20/MF A01

The feasibility of the thermal energy storage/heat engine concept as an energy conversion system was demonstrated The effectiveness of this system as an alternative to storage battery/electric motor for highway vehicle propulsion was not determined The program involves system studies to assess the

economic and technical feasibility of thermal energy storage (TES) for highway vehicle application. The thermal energy storage concept for highway vehicle propulsion uses a storage unit, a heat transfer device, a heat engine, and a power transmission/differential to drive the wheels. The concept should have inherent compatibility with any heat source that provides the required storage temperature, e.g. 1000K. Electric resistance, solar heating, and the combustion of a fuel are all possible. Once charged, the TES/heat engine propulsion system operates with zero exhaust emissions and with low noise. The Stirling cycle heat engine appears to be the best choice. LS

NON-PETROLEUM FUELS AND COMPATIBLE ENGINES 1977 BERC UP-DATE REPORT

R. W. Hurn / In DOE Highway Vehicle Systems Mar 1978 p 352-362 refs
Avail NTIS HC A20/MF A01

Experimental work designed to provide information for best utilization of nonpetroleum transportation fuels is described. Since its inception, this work focused (1) upon fuels and engine systems that could be introduced or adapted in the very short term as a means to alleviate shortfall or potential shortfall in traditional supply and (2) upon fuels that might be produced from oil shale or from coal as supplementary or replacement resources for petroleum. The time frame within which the problem is considered in the context of this program is from the early 80s through the turn of the century. Selection of fuels and fuel components to be used in the study was guided by the following considerations: (1) feasibility of, and energy recovery in producing fuels from the primary energy resource; (2) availability and extent of the primary resource; and (3) suitability of the fuel for those engine and fuel supply systems that could be expected to be (or become) available within the time frame considered. ALCOHOL/GASOLINE BLENDS - LEAN MISFIRE LIMITS

Robert R. Adt, Jr. / In DOE Highway Vehicle Systems Mar 1978 p 362-365 refs

Avail NTIS HC A20/MF A01

Various methods were used for measuring lean misfire limit (LML) characteristics. The methods and their relative merits are discussed. The four-cylinder Pontiac engine used in the tests is described and all testing was done at steady state conditions. It is shown that there is an extension of the LML when a 20 percent methanol blend is substituted for Indolene (gasoline). This LML extension is attributed to an extension of ignition failure to leaner mixtures with the blend. Of the commonly-used LML detection methods, the counting of motoring cycles, as ascertained from in-cylinder pressure transducer measurement, is more sensitive than the monitoring of HC emissions. The sensitivity of counting misfires audible at the exhaust pipe falls between the sensitivities of the motoring cycle- and HC monitoring methods. The sensitivity of the standard deviation of the leanest cylinder blowdown-purge pressure as a LML detector is about the same as the sensitivity of the method using motoring cycling frequency-of-occurrence as a LML detector. LS

METHANOL UTILIZATION

Richard Pefley / In DOE Highway Vehicle Systems Mar 1978 p 365-376 refs

Avail NTIS HC A20/MF A01

The experimental phase of the program focused on the steady state mapping of performance and exhaust emissions of a dynamometer mounted 2300cc Ford Pinto engine. The Indolene and methanol baseline comparison with original equipment indicated that gains in thermal efficiency and reduced exhaust

emissions (with the exception of aldehydes) are obtained while operating on methanol at the same engine speed, load and equivalence ratio ϕ . All of the observed comparative performance and emissions characteristics were subject to the inherent cylinder-to-cylinder variations in ϕ of this particular 4-cylinder engine. Based on the observed maldistribution for both Indolene and methanol it appears that additional relative gains for methanol ranging from 2 to 5 percent in thermal efficiency (and power) are possible if the maldistribution is eliminated in the range 0.8 less than ϕ less than 1.0. Individual exhaust cylinder measurements were recorded. From these measurements the maldistribution effects on exhaust emissions of the NO_x, UBF and CO were resolved. LS

ENGINE LUBRICANTS FOR USE IN METHANOL FUELED HIGHWAY VEHICLES
 E. C. Owens /in DOE Highway Vehicle Systems Mar 1978 p 377-385
 Avail NTIS HC A20/MF A01

In order to provide an initial screening for problems when methanol fuels are used in conjunction with present commercially available lubricants a series of engine tests were conducted using the Coordinated Lubricants Research (CLR) single-cylinder engine. The initial test cycle was patterned after the ASTM Sequence II-C cycle normally used to evaluate the rusting and corrosion characteristics of motor oils. After these initial series of wear screening tests were completed it became apparent that methanol produced additional wear apparently of a corrosive nature. The CLR was fitted with a piston which allowed diversion and collection of blowby from the piston ring zone for analysis. Analysis of the liquid and gaseous phases of this blowby showed that methanol produced significant concentrations of formaldehyde. In addition, a significant concentration of formic acid was present. SOLVING ALCOHOL FUEL PROBLEMS BY ENGINE MODIFICATION
 D. J. Patterson /in DOE Highway Vehicle Systems Mar 1978 p 385-397
 Avail NTIS HC A20/MF A01

The approach used to identify problems and solutions for use of methanol and blends is two pronged. First a careful review of the literature made and pertinent references photocopied and abstracted for the project files. Because published papers often reflect work that is more than one year old and because the understanding of the problems of methanol use is rapidly changing, it was deemed essential to make a number of personal contacts with individuals and laboratories having on-going programs. For this effort, a questionnaire was prepared. This study of the problems and solutions for retrofitting older vehicles is expected to provide guidelines for the design and materials of future vehicles in order to facilitate their operation on methanol or blends should that become desirable. SOLVING ALCOHOL FUEL PROBLEMS BY FUEL MODIFICATION
 James L. Keller /in DOE Highway Vehicle Systems Mar 1978 p 397-407
 Avail NTIS HC A20/MF A01

There are two basically different methods available for altering these properties so as to alleviate problems: (1) converting methanol itself into other chemical species with more favorable properties and (2) modifying fuel composition by adding or removing other components. Examples of the first are conversion to gasoline hydrocarbons by the Mobil process, conversion to t-alkyl methyl ethers by reaction with olefins, and effective conversion to high alcohols. The latter is taken to include the conversion of CO and H₂ partially to higher alcohols instead of to methanol during methanol synthesis. Possibilities for modification by means of additives and otherwise altering fuel composition are discussed. LS

CATALYTIC COMBUSTION FOR THE AUTOMOTIVE GAS TURBINE ENGINE
 D. N. Anderson /in NATO Proc of the 4th Intern Symp on Automotive Propulsion Systems, Vol 1 Feb 1978 p 47-54

Avail NTIS HC A23/MF A01 CSCL 21A

Fuel-air premixing-prevaporizing systems and commercial catalysts were studied as part of a demonstration of a low emissions combustor for an automotive gas turbine engine. A fuel preparation system which would supply a fuel-air mixture which was uniform to within + or - 10 percent of the mean fuel-air ratio with 90 percent fuel vaporization and with no autoignition is described. The catalytic reactor was required to produce emissions which were low enough to meet the most stringent proposed U.S. automotive standards. The overall pressure drop for both systems was to be less than 3 percent, with 1 percent allowed in the fuel-air preparation system and the remainder in the catalytic reactor. BB

GAS TURBINE ENGINE APPLICATIONS IN TRANSIT COACHES
 H. Backel /in NATO Proc of the 4th Intern Symp on Automotive Propulsion Systems, Vol 1 Feb 1978 p 127-136

Avail NTIS HC A23/MF A01

An investigation of gas turbine engine application in transit coaches was conducted to determine the viability of the gas turbine engine as a potential power source for transit coaches. An in-depth survey was taken of gas turbine engine manufacturers whose products may be suitable for installation in transit coaches. Their engine products were evaluated to determine their potential merits against those of the conventional diesel engine used in transit coaches. In addition to research and development engines, nearly 100 DDAD gas turbines were field tested in trucks, transit coaches, intercity coaches, marine craft, industrial electrical generator sets, and air compressors. Three DDAD gas turbine engines were installed in the Transbus prototype coaches. BB

DESCRIPTION AND TEST RESULTS OF THIRD GENERATION CARTER STEAM SYSTEM AS INSTALLED IN A VW DASHER

J W Carter, Jr *In* NATO Proc of the 4th Intern Symp on Automotive Propulsion Systems Vol 1 Feb 1978 p 297-301 refs

Avail NTIS HC A23/MF A01

Bench tests on the Dasher expander were used in conjunction with a computer simulation to determine the fuel economy of the Dasher vehicle. Projected fuel economy in the 2,500 lb vehicle over the Federal City Driving Cycle is 24.8 mpg which compares to the best achieved by a 2,500 lb 1977 vehicle equipped with an automatic transmission. Its idle fuel rate is between 17 and 2 gallons/hour (75 liters/hour). The complete 85 HP steam system weighs 345 lbs (Figure 203), fits in the Dasher engine compartment, and is capable of vehicle acceleration from 0-60 mph (96.5 km/hour) in 14 seconds. The projected exhaust emissions are below the original 1976 requirements and are a valuable characteristic in the congested city environment. All test results indicate that the engine is a viable candidate as an alternative automobile power plant. B B

DEVELOPMENT OF A COMPACT GAS GENERATOR FOR FUEL GASIFICATION ABOARD A MOTOR VEHICLE

A Michel *In* NATO Proc of the 4th Intern Symp on Automotive Propulsion Systems Vol 1 Feb 1978 p 488-501

Avail NTIS HC A23/MF A01

The use of gaseous fuels in internal combustion engines represents a suitable means to reduce the specific pollutant emission and the specific fuel consumption when compared with conventional carburetor operations. Gas engines can be operated far into the lean region due to the homogeneous miscibility of fuel gas cylinders. This gives rise to supply problems and makes it difficult to apply this technique to motor vehicles. It is more favorable to generate the low molecular fuel gas from easily storable liquid hydrocarbons within a gas generator aboard the motor vehicle. Requirements for a gas generator are presented. The requirements may be realized through the catalytic partial oxidation of hydrocarbons with air at low air/fuel (A/F) mass ratios. A suitable catalytic process operating with an A/F ratio of 0.7 to 1.7 at about 820 C was developed. G Y

A NEW LOOK AT EXHAUST GAS RECYCLE AND ITS POTENTIAL FOR IMPROVING FUEL FLEXIBILITY AND ECONOMY OF SPARK IGNITION ENGINES

A Lowi *In* NATO Proc of the 4th Intern Symp on Automotive Propulsion Systems Vol 1 Feb 1978 p 510-515

Avail NTIS HC A23/MF A01

This inquiry proceeds from the general view of engine optimization by charge modification rather than the more narrow objectives of traditional exhaust gas recycle (EGR). Some theoretical and experimental background is reviewed to identify some of the more significant factors characterizing the interaction of the engine and the chemical make-up of the cylinder charge. Some exploratory engine test data were obtained to gain additional appreciation for some of the possibilities for charge modification using certain species found in the engine exhaust. The results were examined for indication of how some of these factors might influence further advancements in the automobile toward reduced rates of both environmental pollution and petroleum consumption. HYDROGEN ENGINE NO_x CONTROL BY WATER INDUCTION

R L Wooley /In NATO Proc of the 4th Intern Symp on Automotive Propulsion Systems, Vol 2 Feb 1978 p 598-608

Avail NTIS HC A22/MF A01

Water induction is an effective means of suppressing flashback and reducing nitrogen oxides in a hydrogen engine. Spraying water into the hydrogen stream prior to mixing with air is more effective than spraying it into the air/hydrogen mixture in the intake manifold. The level of nitrogen oxide production is an exponential function of several parameters: spark advance, equivalence ratio, and ratio of water to hydrogen mass flow rates. Excessive water is not detrimental to engine power and efficiency in the range of interest for automobile engines. A R H

THE EFFECT OF METHANOL ADDITION TO GASOLINE ON TOTAL AND INDIVIDUAL HYDROCARBONS, METHANOL, AND FORMALDEHYDE EMISSIONS FROM A CARBURETTED SPARK IGNITION ENGINE

R D Doepker /In NATO Proc of the 4th Intern Symp on Automotive Propulsion Systems, Vol 2 Feb 1978 p 608-609

Avail NTIS HC A22/MF A01

A four-cylinder, spark ignition carburetted engine was fueled with Indolene (gasoline) and 20 and 30 percent by volume blends of methanol-indolene. Reduced pressure sampling, followed by vapor phase chromatography techniques were utilized to determine qualitatively and quantitatively the composition of the exhaust emissions, including specific hydrocarbon species, methanol and formaldehyde. The light C sub 1 through C sub 5 hydrocarbons were also found to decrease with increasing blend level. Separation of these hydrocarbons into saturated and unsaturated hydrocarbons further demonstrate these observed decreases. These C sub 1 through C sub 5 hydrocarbons represent from 65 to 70 percent of the total hydrocarbon emissions on a gram/Hp-hr basis and over 85 percent on a moles/Hp-hr basis. Chemical composition of the C sub 1 through C sub 5 hydrocarbon fraction was independent of blend level but dependent on equivalence ratio. The C sub 6 through C sub 16 hydrocarbon emissions followed similar trends. A R H

THE INERTIAL STORAGE TRANSMISSION

Vincent E Carman /In NATO Proc of the 4th Intern Symp on Automotive Propulsion Systems, Vol 2 Feb 1978 p 671-672

Avail NTIS HC A22/MF A01

A simple energy storage system that utilizes pressurized oil as an energy storage medium is described. When the internal combustion engine (ICE) and the pump put out more oil than the drive motor requires for vehicle motion the excess is stored in the accumulator. When a pre-determined pressure is reached, the ICE shuts off. When pressure drops off, the pump is used as a starter motor and ICE restarts. Also, the drive motor is connected as braking pump and vehicle inertia is stored in the accumulator. This results in three means of energy saving: (1) the engine can be shut off instead of idling during deceleration, slow cruise, or when stopped; (2) a small engine (60 HP) and powerful drive motor (150 HP) can combine to give optimum performance in most instances with appreciable savings; and (3) the energy of a moving vehicle is not lost in heat during the braking cycle. THE EFFECT OF AERODYNAMIC DRAG ON THE FUEL
ECONOMY OF PASSENGER CARS**

Hans J Emmelmann /In NATO Proc of the 4th Intern Symp on Automotive Propulsion Systems, Vol 2 Feb 1978 p 673-680 refs

Avail NTIS HC A22/MF A01

The relationship between fuel economy and aerodynamics for full size and subcompact cars is discussed. Gasoline-powered and diesel-powered synthesized cars were selected for an analysis using a computerized simulation program to predict fuel economy and performance with and without incorporation of aerodynamic improvements. The technique for realizing the desired aerodynamic improvements on cars is shown. By the so-called detail optimization method, a drag coefficient of $c_{sub} D = 0.42$ within a usual styling concept is achievable. With such optimized gasoline-powered cars maximum improvements in fuel economy referred to average 1977 cars of 7% for full size cars and 4% for subcompact cars are possible. By aerodynamic modification with a minimum assumed drag coefficient of $c_{sub} D = 0.32$, which implies a styling concept strongly influenced by aerodynamics, improvements in fuel economy of 14% for full size cars and 11% for subcompact cars are achievable. Values for diesel powered cars are included. A R H

CONDITIONING TO IMPROVE AUTOMOTIVE FUEL
ECONOMY**

Alvin Lowi, Jr /In NATO Proc of the 4th Intern Symp on Automotive Propulsion Systems, Vol 2 Feb 1978 p 691-696

Avail NTIS HC A22/MF A01

A format for evaluating the energy impact of automotive air conditioning and waste heat alternatives is presented. The conceptual design of one such alternative - an organic fluid engine cooling system combined with a novel jet-vapor-compression automotive air conditioning system - is described

and evaluated in comparison with the conventional belt-driven vapor compression system added on to the contemporary water-cooled power plant. The salient features of this Rankine bottoming cycle approach and some of its characteristics are also described. The value of shifting from a prime shaft-driven system to a hypothetical light-weight waste heat recovery system is determined for a single model year fleet. A potential reduction in the annual energy cost of automotive air conditioning usage of more than 70 percent is indicated, which is shown to be equivalent to the conservation of about 270 million barrels of crude oil over a ten-year period. FLAME SPEEDS, PERFORMANCE, AND EMISSIONS WITH
METHANOL-INDOLENE BLENDS**

Naeim I Henein /In NATO Proc of the 4th Intern Symp on Automotive Propulsion Systems, Vol 2 Feb 1978 p 697-706

Avail NTIS HC A22/MF A01

Methanol, added at different ratios to indolene, has various effects on combustion, performance and emissions in a CFR-SI engine. Flame speed is measured by fixed ionization probes and by a newly developed travelling ionization probe. The resulting turbulent flame speeds, computed laminar flame speeds, and the equivalent spherical flame speeds are analyzed to detect the turbulence decay over the cycle. The following effects were noted: increased octane number and brake specific fuel consumption, improved thermal efficiency, increased flame speed, increased BSCO and BSHC and decreased BSNOx emissions. AUTOMOTIVE MATERIALS COMPATIBILITY WITH METH-
ANOL FUEL BLENDS**

LE Potest /In NATO Proc of the 4th Intern Symp on Automotive Propulsion Systems, Vol 2 Feb 1978 p 707-711

Avail NTIS HC A22/MF A01

The effects of methanol on the materials in automobile fuel systems were investigated using several methanol/gasoline blends including blends with water to simulate moisture pick-up by the methanol. The conditions included ambient and elevated temperatures and with and without agitation. Evaluation was based on weight loss due to uniform corrosion and indications of pitting corrosion, stress corrosion, cracking, and galvanic corrosion. Methanol and methanol/gasoline blends increase the corrosion rates of most metals over the rates found in straight gasoline. Two areas of potential corrosion problems were determined. The most severe problem was the attack of methanol and methanol blends onterne plated steels. Methanol and methanol blends also produced severe pitting in aluminum. Agitation did not appear to have a marked effect on the rate of corrosion, and the difference in temperature from 70 F to 120 F did not make an appreciable difference in corrosion rates. A R H

ALTERNATIVE FUELS WITH REGARD TO LPG AND**

METHANOL

J VanDerWeide / In NATO Proc of the 4th Intern Symp on Automotive Propulsion Systems Vol 2 Feb 1978 p 727-730

Avail NTIS HC A22/MF A01

The increased use of LPG in many Western European countries as an automotive fuel in cars vans and taxis results from the long term availability of LPG from the North Sea where it exists in the form of an associated gas. The exhaust emissions produced in seven European cars each running on four different gasolines (lead-free low octane lead-free high octane, premium and regular) LPG and NG were compared. Favorable emission data obtained for LPG and NG are discussed. Strongly reduced exhaust emissions (which meet U.S. standards for 1978) and substantial noise reduction were obtained when LPG was used in city buses during demonstration projects in London Vienna, and Amsterdam. Cost calculations for large-scale operations are comparable to those for diesel vehicles. Experience with methanol as a fuel or blending component is less extensive. Its use as an alternative fuel in the Netherlands is discussed. A R H

THE EFFECT OF BLENDING METHANOL WITH GASOLINE ON GEOMETRIC DISTRIBUTION

R R Adt / In NATO Proc of the 4th Intern Symp on Automotive Propulsion Systems Vol 2 Feb 1978 p 730-732

Avail NTIS HC A22/MF A01

A four cylinder carbureted engine was fueled with Indolene (gasoline) and a blend of Indolene and 20 percent by volume methanol to determine the effect of the blend on geometric distribution. The engine parameters varied were engine speed manifold vacuum equivalence ratio, and simulated cruising speed. The results show that while both fuels, in general exhibited similar distribution patterns as a function of the engine parameters, the blend fueled mode of operation yielded a greater difference between the fuel-air equivalence ratios of the richest and leanest cylinders. ALTERNATIVE FUELS THE OUTLOOK AND OPTIONS WITHIN THE NEXT DECADE

R W Hurn / In NATO Proc of the 4th Intern Symp on Automotive Propulsion Systems, Vol 2 Feb 1978 p 732-735

Avail NTIS HC A22/MF A01

A recent interagency governmental study group conclusion that automobile fuel to the year 2000 will be primarily conventional hydrocarbon liquids such as gasoline diesel fuel, or a combination of gasoline and distillate-type fuels narrows the issue for the primary fuel. However, highly significant questions remain concerning both the possible secondary supplemental fuels and the characteristics of the hydrocarbon type fuels. Such fuels as ammonia and hydrogen which require production distribution and engine fuel system technologies can be dismissed for the near-term. The current need is to identify those fuel forms their fuel characteristics and the compatible engines that may result from the utilization of solids for conversion to liquid fuels, as well as the adaption of new or upgraded engine technologies to achieve parallel objectives of low emissions and improved fuel economy. VEHICLE EVALUATION OF NEAT METHANOL COM-PROMISES AMONG EXHAUST EMISSIONS, FUEL ECON-OMY, AND DRIVEABILITY

N D Brinkman / In NATO Proc of the 4th Intern Symp on Automotive Propulsion Systems, Vol 2 Feb 1978 p 736-738

Avail NTIS HC A22/MF A01

Two cars one carbureted and the other fuel injected, were modified to burn neat methanol. Exhaust emissions fuel economy and driveability were measured and compared to those obtained

with gasoline in the unmodified (production) cars. Because acceptable driveability and durability were obtained only with the fuel injected car, it was used to investigate the spark timing and equivalence ratio settings which would give an acceptable compromise among exhaust emissions fuel economy and driveability. Average equivalence ratios of 0.96 to 0.62 and spark timing from best power to 15 degrees retarded were studied. With spark timing set for best power and the average equivalence ratio for maximum fuel economy (0.83) driveability was acceptable and CO and NOx emissions met the 1977 standards. However the unburned fuel emissions exceeded the 1977 standards for hydrocarbons even though the car was equipped with a catalytic converter. At 0.83 average equivalence ratio NOx emissions were reduced below the statutory standard (0.4) by retarding spark timing, however driveability and fuel economy deteriorated. Author

EVALUATION OF ACETYLENE AS A SPARK IGNITION ENGINE FUEL

D L Hilden / In NATO Proc of the 4th Intern Symp on Automotive Propulsion Systems Vol 2 Feb 1978 p 738

Avail NTIS HC A22/MF A01

Acetylene was evaluated in a single cylinder engine to investigate performance and emission characteristics with special emphasis on lean operation for NOx control. Testing was carried out at constant speed, constant airflow and MBT spark timing. Equivalence ratio and compression ratio were the primary variables. With acetylene the engine operated at equivalence ratios as lean as 0.53 and 0.43 for compression ratios of 4 and 6, respectively. However, the operating range was very limited. Knock-induced pre-ignition occurred either with compression ratios above 6 or with mixtures richer than 0.69 equivalence ratio. Both the indicated thermal efficiency and power output were less for acetylene fueling than for gasoline. Acetylene combustion occurred at sufficiently lean equivalence ratios to produce very low NOx and CO emissions. However, when the low NOx levels were achieved, hydrocarbon control was not improved over that with gasoline. A R H

CHARACTERISTICS OF A SINGLE-CYLINDER HYDROGEN-FUELED I C ENGINE USING VARIOUS MIXTURE FORMATION METHODS

K W Drexel and M Gutmann / In NATO Proc of the 4th Intern Symp on Automotive Propulsion Systems, Vol 2 Feb 1978 p 741-745

Avail NTIS HC A22/MF A01

Research work on hydrogen engines is survey. It is shown how the output of the engine depends on the mixture formation method used. Direct injection of hydrogen into the cylinder results in a gain in b.m.e.p. as compared with mixture formation in the intake pipe. The engine's operational parameters were set to reach minimum fuel consumption and minimum emissions. This involves combined quality/quantity-control and a compression ratio of 7.1 to avoid knocking at stoichiometric air/fuel-ratios. G Y

A STUDY ON REFORMED FUEL FOR AN AUTOMOTIVE GASOLINE ENGINE

K Onoda / In NATO Proc of the 4th Intern Symp on Automotive

Propulsion Systems, Vol 2 Feb 1978 p 759-768

Avail NTIS HC A22/MF A01

A prototype on-board fuel reformer was developed and laboratory tests were conducted to determine the effects of the amount of reformed fuel on combustion. The results of these tests are discussed in this paper. On the Japanese test cycle, an extremely low NO_x emission level was attained with relatively good fuel economy. However, in a limited combination of engine size and vehicle weight, engine power was sacrificed somewhat because of this lean combustion. A solution to this problem, while maintaining the lower NO_x emission level is to adopt a richer air-fuel ratio and a higher EGR rate. In this approach, the amount of hydrogen must be increased to improve combustion stability. For this purpose, methanol reforming was introduced whereby the additional hydrogen was supplied without any deterioration in energy efficiency. Author

REFUELING HYDROGEN TRANSIT FLEETS, PART A: ECONOMICS

R B Beyer In NATO Proc of the 4th Intern Symp on Automotive Propulsion Systems, Vol 2 Feb 1978 p 774-784 refs

Avail NTIS HC A22/MF A01

The economics of several hydrogen manufacturing, distribution, and use strategies are evaluated for a fleet of converted buses for the purpose of setting a guide in selection of feasible methods for refueling. The most attractive alternative is pipeline distribution of hydrogen produced from gasified coal and water for use in FeTi hydride vehicles. A system based on existing technology is estimated to cost midway between the current cost of gasoline (US) and the predicted cost of synthetic gasoline from coal. A hydrogen bus fleet supplied by pipeline will have a lower total cost than systems using other synthetic fuels derived from coal. G Y

HYBRID HEAT ENGINE PROPULSION OF URBAN BUSES**

G Larson In NATO Proc of the 4th Intern Symp on Automotive Propulsion Systems, Vol 2 Feb 1978 p 795-802

Avail NTIS HC A22/MF A01

The developments to date in hybrid heat engine propulsion of buses are reviewed. Urban bus driving cycles and performance requirements are presented, based upon a survey of available urban bus driving patterns. Using these cycles and requirements, promising hybrid systems were sized through use of a vehicle propulsion simulation computational program. Both battery and flywheel energy storage subsystems were considered. The results of the hybrid study to date are reported. The heat energy simulated was a diesel. From the near-optimum hybrid propulsion system generated by the trade-off analysis, fuel economy and weight are presented and compared with values of present operational diesel buses negotiating the same driving cycles. A diesel/flywheel series configuration is projected to have at least a 100 percent increase in fuel mileage (mpg) over the baseline diesel bus fuel mileage. Author

FLYWHEEL ELECTRIC MOTOR HYBRID POWER TRAIN FOR ELECTRIC VEHICLES

G C Kugler In NATO Proc of the 4th Intern Symp on Automotive Propulsion Systems, Vol 2 Feb 1978 p 829-845

Avail NTIS HC A22/MF A01

The performance of an automotive power source can be described using two parameters: energy storage capacity and power output capability. The total amount of usable energy determines the vehicle's range under defined driving profiles, while the maximum power output or the rate of energy utilization limits the maximum dynamic performance capabilities such as rate of acceleration and grade climbing ability. Specific power

(watts/lbs) and specific energy (watt-hours/lb) requirements of a battery used to power an electric vehicle with certain performance envelopes is shown. The hypothetical vehicle weight, 2000 lbs., has a rolling friction of 35 lbs., and an aerodynamic coefficient of 0.60, a frontal area of 20 sq ft., and a battery weight of 500 lbs. It is concluded that the only battery system that will be economically available for the next half decade in high quantity production is lead acid. G Y

COMPARATIVE EFFICIENCIES OF ALTERNATIVE FUTURE AUTOMOTIVE POWER SYSTEMS

G P Fetterman /In NATO Proc of the 4th Intern Symp on Automotive Propulsion Systems, Vol 2 Feb 1978 p 855-864

Avail NTIS HC A22/MF A01

An analysis of the overall energy efficiency of a small (2 + 2) urban vehicle powered by five different power trains, all with similar acceleration performance and payload capabilities is presented. The drive trains compared are a hydrogen-fueled-spark-ignition engine, an advanced gasoline-fueled-spark-ignition engine, diesel engine, a diesel/electric hybrid, and a pure electric with an advanced motor/controller and battery. The test weight of each vehicle is varied so that differences in both power system weight and chassis weight propagation are reflected. Each vehicle is mathematically modeled and driven over the EPA urban driving cycle so that its road load energy requirements are generated. The energy usage of each vehicle is then traced through its drive train and fuel processing efficiencies and measured in terms of raw energy in the ground. Estimates are made of the energy used in the production of each vehicle, and the total life cycle energy consumption is calculated. Author

The microwave beam of the Solar Power Satellite (SPS) is predicted to interact with the ionosphere producing thermal runaway up to an altitude of about 100 kilometers at a power density threshold of 12 mW/cm sq (within a factor of two). The operation of the SPS at two frequencies, 2450 and 5800 MHz is compared. The ionosphere interaction is less at the higher frequency but the tropospheric problem scattering from heavy rain and hail is worse at the higher frequency. Microwave signals from communication satellites were observed to scintillate but there is some concern that the uplink pilot signal may be distorted by the SPS heated ionosphere. The microwave scintillations are only observed in the tropics in the early evenings near the equinoxes. Results indicate that large phase errors in the uplink pilot signal can be reduced. S E S

HC A04/MF A01 CSCL 081

Underground coal mining system production, failures and repair cycles were mathematically modeled as a closed network of two queues in series. The model was designed to better understand the technological constraints on availability of current underground mining systems, and to develop guidelines for estimating the availability of advanced mining systems and their associated needs for spares as well as production and maintenance personnel. It was found that mine performance is theoretically limited by the maintainability ratio. Significant gains in availability appear possible by means of small improvements in the time between failures. The number of crews and sections should be properly balanced for any given maintainability ratio and main haulage systems closest to the mine mouth require the most attention to reliability. S B S

NORTHERN NEVADA GEOTHERMAL EXPLORATION
STRATEGY ANALYSIS**

N E Goldstein Dec 1977 58 p
(Contract W-7405-eng-48)
(LBL-7012) Avail NTIS HC A04/MF A01

The results of exploration techniques applied to geothermal resource investigations in northern Nevada were evaluated and rated. A quantitative rating scheme was used to obtain estimates of technique effectiveness. From survey cost information cost-effectiveness estimates for the various techniques were also obtained and compared. Effectiveness estimates were used to develop an exploration strategy for the area. However, because no deep confirmatory drilling has been done yet the technique evaluations and exploration strategy must be considered as preliminary. The strategy was further studied by means of a decision tree analysis merging the strategy with the timing of land acquisition and deep drilling to find the scenario that gives the highest cost-effectiveness values for drilling success overall project success, and maximum expected returns on exploration investment. Based on assumed probabilities it is shown that land acquisition should be deferred until after the basic detail-phase exploration is completed. The cost effectiveness of the initial confirmatory drill hole will be a maximum when land acquisition is followed by a supplemental detail-phase program, but this approach does not lead to the highest expected return on investment. A SAMICS (Solar Array Manufacturing Industry Costing Standards) was formulated as a computer simulation model. Given a proper description of the manufacturing technology as input, this model computes the manufacturing price of solar arrays for a broad range of production levels. This report presents a model for computing these marketing and distribution costs, the end point of the model being the loading dock of the final manufacturer

 (NASA-CR-157403 LMSC-D573788) Avail NTIS HC A04/MF A01 CSCL 10A

The feasibility of modifying the solar electric propulsion (SEP) 66 watt/kilogram, 12.5 kilowatt solar array blanket design to incorporate ultra-low mass blanket technology and to generate conceptual design data by modifying the SEP solar array design to 17.5kW power output was performed. Five modified designs were developed which substituted present SEP solar array design components with one or more of 50 micron thick solar cells, 75 micron cell coverglasses, and a different blanket substrate developed by GE. A parametric analysis was performed to determine the solar array mass least weight and blanket tension required to maintain a minimum natural frequency of 0.04 Hz. The solar array wing assembly weights and power outputs were calculated and preliminary cost estimates for flight hardware development fabrication and qualification were made for each case studied

SITING ISSUES FOR SOLAR THERMAL POWER PLANTS WITH SMALL COMMUNITY APPLICATIONS

J J Holbeck and S J Ireland 20 Jul 1978 49 p refs
 Sponsored by DOE

(Contract NAS7-100)

(NASA-CR-157559 JPL-Pub-78-75 DOE/JPL-1060-78/2)
 Avail NTIS HC A03/MF A01 CSCL 10B

Technologies for solar thermal plants are being developed to provide energy alternatives for the future. Implementation of these plants requires consideration of siting issues as well as power system technology. While many conventional siting considerations are applicable, there is also a set of unique siting issues for solar thermal plants. Early experimental plants will have special siting considerations. The siting issues associated with small dispersed solar thermal power plants in the 1 to 10 MWe power range for utility/small community applications are considered. Some specific requirements refer to the first 1 MWe engineering experiment for the Small Power Systems Applications (SPSA) Project. The siting issues themselves are discussed in three categories: (1) system resource requirements, (2) environmental effects on the system, and (3) potential impact of the plant on the environment. Within these categories, specific issues are discussed in a qualitative manner. Examples of limiting factors for some issues are taken from studies of other solar systems

SOLAR HEATING OF BUILDINGS AND DOMESTIC HOT WATER Final Report, Jul 1974 - Dec 1975

E J Beck Jr and R L Field Nov 1977 88 p refs Revised (YF57571999)

(AD-A054601 CEL-TR-835) Avail NTIS HC A05/MF A01 CSCL 03/2

The purpose of this document is to provide guidance in the design and cost analysis of solar heating systems for buildings and domestic hot water (DHW). The nature of solar radiation, several types of solar systems, storage devices and architectural considerations are among topics included. Calculation methods are included for determining collector size, storage size, simplified building and DHW loads, value of fuel saved and saving-investment ratios. The calculation procedure is based on parametric curves for fraction of heating load supplied by solar energy and several rules of thumb for design. A series of 11 worksheets is used to enable the engineer with no prior experience with solar systems to accomplish a complete design and cost analysis. With this information he can prepare bidding and specification documents for the job. Tables of solar insolation at various Navy stations, typical building heat loads, collector prices by type and storage tank prices are included. Two example problems are worked for tube-in-sheet collectors: one for space and DHW heating for a single dwelling and the other DHW supply for a dispensary. Neither was found to be cost effective when competing against present day prices for natural gas. A directory of manufacturers and bibliography is also included.

(Contract W-31-109-eng-38)

(ANL-77-56) Avail NTIS HC A02/MF A01

Efforts were directed toward understanding and improvement of molten-carbonate-electrolyte fuel cells operating at temperatures near 923 K. A primary focus of the work was on developing electrolyte structures which have high strength and conductivity, as well as good electrolyte retention and on developing methods of synthesis for electrolyte structures that are amenable to mass production. A low temperature synthesis which produces material having rodlike particles of beta-LiAlO₂ was refined and is now used for preparing electrolytes. Cell testing is essential for understanding and evaluating individual component behavior and the interactions of the components under realistic operating conditions. Most of the testing to date was conducted in a 7-cm (2 3/4-in)-dia cylindrical cell with Type 316 stainless steel housings and current collectors, a nickel anode and a nickel oxide cathode. ERA

EVALUATION OF INTERMEDIATE-Btu COAL GASIFICATION
SYSTEMS FOR RETROFITTING POWER PLANTS
Final Report**

D A Waitzman, H Faucett, D E Nichols, S V Tomlinson, and W J Broadfoot. Aug 1977. 126 p. refs. Sponsored by Electric Power Research Inst. (EPRI-AF-531). Avail. NTIS HC A07/MF A01.

Process and economic evaluations were made of two different intermediate-Btu coal gasification systems retrofitted to an existing electric power unit. One of the systems uses fixed-bed oxygen-blown Lurgi gasifiers for sized coal (coal fines are sold as a byproduct) with a tar and oil cleanup, hydrogen sulfide removal and sulfur recovery processes. The other system uses entrained-bed gasifiers which gasify the coal including fines, with a hydrogen sulfide removal and sulfur recovery process. Using a prescribed set of representative power unit process design and economic premises, a base case (500 MW 35% S in coal existing unit) incorporating the latest available technology was defined for each system including a complete material balance, equipment list and construction and operating requirements. Capital investment, annual revenue requirements (7,000 hr/yr) and lifetime revenue requirements (over a 25-yr declining operating profile) were estimated for the base case of each system. ERA

TECHNICAL AND ECONOMIC FEASIBILITY OF THERMAL
STORAGE Final Report**

B Shelpuk, P Joy and M Crouthamel. Jun 1977. 118 p. refs. (Contract EY-76-C-02-2591). (COO/2591-76/1). Avail. NTIS HC A06/MF A01.

Various thermal energy storage alternatives were compared for performance and annualized cost which result from each storage alternative operating with the same solar collector model, the same building load model and the same heating system and controls model. Performance and cost calculations were made on the basis of an hour-by-hour time step using actual weather bureau data for Albuquerque, N M, and New York City for a single six-month heating season. The primary conclusion is that using current costs for materials and containers, water is the cheapest storage alternative for heating applications in both Albuquerque and New York City. The cost of containing or encapsulating phase change materials, coupled with their small system performance advantage is the main reason for this conclusion. The use of desiccant materials for thermal storage is considered to be impractical due to irreversibilities in thermal cycling. ERA

ALTERNATE OPERATING CONDITIONS AND SYSTEMS
FOR THE COAL-FIRED MODULAR INTEGRATED UTILITY
SYSTEM**

G Samuels and W M Wells. Feb 1978. 54 p. refs. (Contracts W-7405-eng-26 EX-76-A-01-1742). (ORNL/HUD/MIUS-46). Avail. NTIS HC A04/MF A01.

An analysis is made to determine the effects of varying the operating conditions of a coal-fired closed-cycle gas turbine modular integrated utility system on the efficiency and cost of

the plant and to evaluate the merits of using an organic Rankine system for this application either as a single cycle or in combination with the gas turbine system. The electrical efficiency and overall fuel utilization of the reference gas turbine plant were severely degraded by reducing the turbine inlet temperature. The electrical efficiency was reduced about two points for each 100 F (56 K) reduction in temperature with little if any change in the cost of the plant over a temperature range from 1500 to 1200 F (1089 to 922 K). A single cycle organic Rankine system was not well suited for this application and would, at best, be very marginal. The addition of an organic Rankine secondary cycle to the gas turbine system offered the potential for significant improvements in both efficiency and cost over that of the reference gas turbine plant. ENERGY USE IN JAPAN AND THE UNITED STATES

A Doernberg. Aug 1977. 73 p. refs.

(Contract EY-76-C-02-0016).

(BNL-50713). Avail. NTIS HC A04/MF A01.

This comparative study was undertaken to explain in part the per capita differential between the two countries. In the introduction, the ratios of energy per capita and energy per dollar of gross domestic product (GDP) are presented. The exchange rates utilized to convert GDP to a common currency are discussed. Brief sections on the energy supply and electric generation situation in Japan are included for background information, followed by the energy consumption sectors. The industrial sector merits most attention because Japan's industrial capacity is second only to that of the U.S. among industrialized nations and it is here where an intercountry comparison can reveal possibilities of technology transfer. A gross energy efficiency indicator for all industry (measured as industrial energy use per dollar of GDP originating in industry) is established. ERA

PUBLIC REACTIONS TO WIND ENERGY DEVICES
Final Report**

Oct 1977. 215 p. Sponsored in part by DOE.

(Grant NSF APR-75-22213).

(NSF/RA-770026). Avail. NTIS HC A10/MF A01.

Reactions of the general public toward different types of wind energy devices for generating electric energy were explored. More specifically, the objectives were twofold: to provide substantive information on public acceptance of different types of wind energy devices in different settings and to furnish a methodological base for more intensive studies of public acceptance of such devices. Personal interviews with statistical random samples of adults in six different parts of the country were conducted with primary emphasis on rural and smaller urban areas. The locations selected were western Michigan, southeastern Wyoming, western Washington, eastern Rhode Island, the Chicago area and the Sandy Hook Unit of the Gateway National Recreation Area in New Jersey. Those interviewed were questioned on a number of topics including their attitudes toward their opinions on paying extra for pollution-free sources of energy. In addition, they were shown slides of different wind energy machines in various settings and were asked to indicate their preferences from an aesthetic point of view. ERA

RESIDENTIAL ENERGY USE TO THE YEAR 2000 A REGIONAL ANALYSIS

E Hirst and J B Kurish Nov 1977 50 p refs

(Contract W-7405-eng-26)

(ORNL-CON-17) Avail NTIS HC A03/MF A01

The effects of residential energy conservation programs in each of the ten Federal regions are evaluated. The programs considered are those proposed in the National Energy Plan: appliance efficiency targets, thermal standards for construction of new residences and weatherization of existing housing units. Implementation of these programs might cut cumulative (1977-2000) national residential energy use by 41 Qbtu. Relative

energy savings are highest in Regions 7 and 8 (11 and 10% respectively, of their baselines) and smallest in Region 9 (7%). The net economic benefit to the nation's households of these three Federal programs is \$21 billion. Benefits exceed costs in each region; the benefit/cost ratio ranges from a low of 1.4 in Region 10 to a high of 2.0 in Region 6. ERA

THE 1977-1978 HEATING SEASON. PROJECTED NATURAL GAS CURTAILMENTS AND POTENTIAL NEEDS FOR ADDITIONAL ALTERNATE FUELS
 Nov 1977 116 p refs. Sponsored by DOE
 (DOE/EIA-0015) Avail NTIS HC A06/MF A01

Curtailments of natural gas requirements for end-use customers at the national level during the 1977-1978 heating season (November-March) are projected to be 1.83 trillion cubic feet (Tcf). These projected curtailments are 60 billion cubic feet (Bcf) or 3 percent lower than projections made for the 1976-1977 season with both projections based on assumptions of normal winter weather. Projected gas curtailments at the national level for the 1977-1978 heating season are 155 Bcf lower than the actual curtailments reported for the 1976-1977 heating season. The higher curtailments last season were influenced by colder-than-normal winter weather that occurred in many states east of the Mississippi River and in the upper Midwest. Reasons for changes in curtailments, projections of curtailments by type of customer, local areas subject to gas curtailments problems, availability of alternate fuels and estimated magnitude of additional costs of substituting alternate fuels for curtailed gas volumes are given.  (Contract EY-76-S-02-1340)
 (COO-1340-55) Avail NTIS HC A04/MF A01

Various feedback mechanisms between the oceans and the atmosphere were examined. Several of these mechanisms appear to be the cause of the interannual variability of the atmosphere's general circulation and of climatic changes on a time scale of several tens of years. Specifically, a recent cooling-trend in the North Pacific north of 40°N, and sea surface temperature fluctuations with an irregular periodicity of 2 to 4 years superimposed upon this trend were examined. To advance regional long-range forecasting skills, January temperature anomalies over the eastern United States were correlated with flow patterns over the U.S. and Canada. The space heating energy consumption model for Greeley, Colorado, for the winter of 1976-77 was within 98.9 percent of actual natural gas consumption for that city. ERA

SUMMARY REPORT OF AVAILABILITY OF GEOTHERMAL DATA FOR POTENTIAL DIRECT HEAT APPLICATION IN NEVADA

D T Trexler. Sep 1977 12 p.
 (Contract EY-76-S-08-0671)
 (NVO/0671-1) Avail NTIS HC A02/MF A01

An assessment of available data on geothermal springs and wells was performed by first ascertaining which agencies both State and Federal maintain files which have water temperatures. The principal files are maintained by the Nevada Bureau of Mines and Geology, U.S. Geological Survey and Water Resources Center-Desert Research Institute. The State Engineer's office maintains files of driller's logs. Requirements for completing driller's logs under subsection 5 states water temperature will be reported, if thermometer is unavailable an estimated temperature will be given as cold, warm or hot. The second phase of the assessment of available data to determine the quality of the

data in each file was performed by inventory of files and by cross-correlating files by cursory examination. An estimate of the number of entries in the Nevada Bureau of Mines and Geology (NBMG) file with inferred temperatures that could be associated with confidence to replace data was also made. ERA

DEVELOPMENT OF THE BANDWRAP FLYWHEEL
 C E Knight Jr, J J Kelly, R L Huddleston and R E Pollard
 1977 20 p refs. Presented at the Flywheel Technol Symp
 San Francisco 5-7 Oct 1977
 (Contract W-7405-eng-26)

(Y/DA-7290 Conf-771053-3) Avail NTIS HC A02/MF A01
 The development of the first test flywheel is described. The flywheel design uses a thick rim element and unidirectional fiber composite bands which pass around the rim diameter and across a metal hub fitted to the drive shaft. The individual bands are meshed together at the hub and function similar to spokes on a wheel. The design is called the 'bandwrap' flywheel. In the development process, conceptual designs were selected for detailed study. After detailed study the bandwrap design was selected for fabrication and test. After fabrication, the flywheel was spun to 18,000 rpm where where a predicted delamination occurred in the rim. At this speed, the energy stored was 0.25 kwh and the energy density was 10.1 Wh/lb. ERA

N78-30696# Oak Ridge Y-12 Plant, Tenn
ANALYSIS OF THE DELTAWRAP FLYWHEEL DESIGN
 C E Knight, Jr. 1977 9 p refs. Presented at the Flywheel Technol Symp. San Francisco 5-7 Oct 1977
 (Contract W-7405-eng-26)

(Y/DA-7292 Conf-771053-6) Avail NTIS HC A02/MF A01
 An extension of the 'bandwrap' design is discussed. A model and computer program developed calculates the thickness and elastic properties versus position on the overwrap. The thickness is calculated based on coverage per band, number of bands, and band thickness at a given radial coordinate. The elastic properties are derived assuming the overwrap material to be modeled by the properties of an angle ply laminate. The thickness and properties provide input to a finite element model. A linear elastic finite element analysis provides an estimate of the energy storage potential for this design. The model was two dimensionally axisymmetric and was analyzed using the ADINA finite element program. ERA

INFLATED CYLINDRICAL SOLAR CONCENTRATOR FOR PRODUCING INDUSTRIAL PROCESS HEAT

J W Gerich. 14 Oct 1977. 23 p. refs. Sponsored by DOE (UCID-17612). Avail NTIS HC A02/MF A01

The use of industrial process heat below 170 C accounts for 5% of this country's total energy consumption. A concentrating solar collector to produce hot water and steam in this temperature range is under development. The collector structure consists mainly of an inflated thin film plastic cylinder that is clear on the upper portion and is an aluminized reflector on the lower portion. The reflector concentrates sunlight on a receiver tube which is jacketed with a heat transfer suppressing, thin film plastic cylinder. Because of its simplicity, it is believed this collector will be cost effective relative to fossil fuels such as oil at \$15/bbl. Computer codes were written to analyze the optical and thermal properties of this collector. Results indicate that weekly tilting of the collector provides over 90% of the energy available from continuous tracking. A selective surface on the receiver tube increases the useful energy gain by more than a factor of five at 170 C. ERA

N78-30701# Department of Energy, Washington, D C. **METHODOLOGICAL ASPECTS OF ESTIMATING THE EFFICIENCY OF UTILIZATION OF FUEL AND ENERGY RESOURCES**

R B Akhmedov. [1977]. 17 p. refs. Transl. into ENGLISH of Report from All-Union Sci. Res. Inst. of Complex Fuel and Energy Probl. State Planning Comm. of the USSR, Moscow, 1977 (DOE-TR-25). Avail NTIS HC A02/MF A01

The economy of the Soviet Union is developing on the basis of utilization of its own fuel and energy resources (FER). This is an important advantage of the Soviet economy and one of the prerequisites for its stable growth. However, in order to make full use of this advantage, it is necessary to utilize the available FER as efficiently as possible. This means that the actual demand for various types of fuel and energy in all the branches of the national economy must be satisfied with minimum total national economic expenditures on the prospecting, extraction, processing, conversion, distribution, and utilization of the energy resources. A methodological basis for planning measures aimed at raising the efficiency of FER utilization and conservation includes the identification and study of existing reserves of FER economy, and technical and economic justification of the sequence, periods, scales, and branch and territorial structure of their realization. Depending on the planning period of a measure, various methods of study were used. Some specific data were used to show calculation methods. Author (ERA)

Alvin M Weinberg. Jul 1977. 31 p. refs.

(ORAU/IEA(M)-77-2) Avail NTIS HC A03/MF A01

Two asymptotic worlds, one based on solar energy, the other based on nuclear energy, are compared. The total energy demand in each case is 2,000 quads. Although the sun can, in principle, supply this energy, it probably will be very expensive. If the energy were supplied entirely by breeders, the nuclear energy system would pose formidable systems problems--particularly safety and proliferation. It is suggested that in view of these possible difficulties, all options must be kept open. ERA

MODEL CODE FOR ENERGY CONSERVATION IN NEW BUILDING CONSTRUCTION

Dec 1977. 86 p. refs.

(Contract EY-76-C-03-1230)

(SAN/1230-1) Avail NTIS HC A05/MF A01

A model code for energy conservation in building construction was developed, setting forth the minimum regulations found necessary to mandate such conservation. The code addresses itself to the administration, design criteria, systems elements, controls, service water heating and electrical distribution and use, both for depletable and nondepletable energy sources. The document is intended for use by state and local building officials in the implementation of a statewide energy conservation program. ERA

HC A03/MF A01

A review of inorganic pollutants in coal classifies them according to affinity with other major inorganic mineral components (sulfides, sulfates carbonates, etc) or affinity with the organic coal The latter elements are B Br and Ge and, in some coals Be Ga, Sb, Ti, U and V Most elements have a lower concentration in coal than in the surrounding rocks but a few are more concentrated in the coal (As Cl, B and especially Se) During combustion some of the calcium and other alkali metal compounds appear to tie-up a portion of the sulfur in the coal as sulfates (and thus reduce the air pollution by SO₂), if the combustion temperature is not too high Fly ash formation is also discussed and the tendency of the more volatile elements (or their compounds) to be concentrated on the submicron particle sizes Finally, several elements in the ash are recommended for special attention because of possible toxic effects on terrestrial systems, as a result of air pollution or leaching from ash disposal sites

(Contract EY-76-S-05-033)
(ORAU/IEA-M-77-27) Avail NTIS HC A03/MF A01

Increases in the atmospheric concentration of CO₂ cause concern only when the quantities become large--i.e several hundred billion tons of additional carbon The direct contribution

from emphasis on coal use through 1985, as called for in the U.S. National Energy Plan is of minor consequence. On the other hand if such a policy continues into the next century, or if it serves as a model for major segments of the world then the quantity of resulting CO₂ could have serious consequences early in the next century. Further if coal is used on a large scale as the base for liquid and/or gaseous synthetic fuels as the oil and natural gas reserves are depleted the inefficiencies of conversion would serve to increase the CO₂ produced per unit of delivered energy and further aggravate the problem. Potential energy economic and environmental impacts that would result from a policy decision to halt any further construction of nuclear power plants were studied. Wherever possible, each modeling group used the same set of model input parameter values to estimate the impacts. The analysis was based on the use of an integrated modeling system, the long-term interindustry transactions model, the Brookhaven dynamic energy system optimization model, and several groups of interface equations. The model system is first described and then used to estimate four alternative energy economic and environmental futures. In the Base Case scenario, it was assumed that growth in the nuclear sector will not be constrained by safety or security considerations so that, when economical, nuclear reactors will build up at reasonable rates including advanced uranium and breeder reactors, starting in 2000. HC A06/MF A01 CSCL 13B

The objectives of how best to select a layout and mining system were examined and also to develop and operate an underground coal mine while at the same time minimizing pollution of the environment. The pre-mining environment was assessed by sampling Cedar Creek 3 and other streams. Analyses of samples of groundwater into the mine of the water pumped from the mine sump, and of water from Cedar Creek below the mine, made possible the assessment of the area with regard to water quality. Principal factors associated with mining which affected downstream water quality were sulfide oxidation and acid formation in the mine, the quality of the groundwater seeping into the mine, the limestone used for rock dusting, and the quality of the resettled but not treated mine and washing plant water carried to the continuous miners for dust suppression. Deep mines in Alabama's synclinal coalfields, if entered some distance from the outcrop, or mined down-dip if started on the outcrop, should produce little surface pollution. GRA

THE BIOENVIRONMENTAL IMPACT OF A COAL-FIRED POWER PLANT, COLSTRIP, MONTANA, DECEMBER 1977 Interim Report

Eric M. Preston and Robert A. Lewis. Feb 1978. 531 p. refs. (PB-280326/O, EPA-600/3-78-021, IR-3) Avail NTIS HC A23/MF A01 CSCL 13B

The EPA has recognized the need for a rational approach to the incorporation of ecological impact information into power facility siting decisions in the northern great plains. Research funded by the Colstrip, Coal-fired Power Plant Project is a first attempt to generate methods to predict the bioenvironmental effects of air pollution before damage is sustained. Pre-construction documentation of the environmental characteristics of the grassland ecosystem in the vicinity of Colstrip, Montana began in the summer of 1974. Since then, key characteristics of the ecosystem were monitored regularly to detect possible pollution impacts upon plant and animal community structure. In the summer of 1975, field stressing experiments were begun to provide the data necessary to develop dose-response models for SO₂ stress on a grassland ecosystem. These experiments involve continuous stressing of one acre grassland plots with measured doses of SO₂ during the growing season (usually April through October). Results of the 1975 field season's investigations are summarized in this publication. The six-year project will terminate in 1980 and a final report will be published after data analyses are complete. GRA

N78-30746 California Univ., Berkeley. **MICROSEISMS IN GEOTHERMAL EXPLORATION STUDIES IN GRASS VALLEY, NEVADA** Ph.D. Thesis

Alfred Liang-Chi Liaw. 1977. 188 p.

Avail Univ. Microfilms Order No. 78-12658

Frequency-wavenumber (f-k) spectra of seismic noise measured at several places in Grass Valley, Nevada, exhibited numerous features which were correlated with variations in surface geology and sources associated with hot spring activity. Exploration techniques for geothermal reservoirs, based upon the spatial distribution of the amplitude and frequency characteristics of short-period seismic noise, were applied and evaluated. A detailed investigation of the spatial and temporal characteristics of the noise field was made to guide subsequent data acquisition and processing. A small two-dimensional array was placed at 16 locations in the region to map propagation parameters. The f-k spectra reveal local shallow sources, but no evidence for a significant body wave component in the noise field was found. With proper data sampling, array processing provides a powerful method for mapping the horizontal component of the vector phase velocity of the noise field. Dissert. Abstr.

Ronald W. Marrs and J. Marwitz. 1977. 23 p. refs. Presented at 3d Biennial Wind Energy Conversion Systems Conf., Washington, D.C., 19 Sep 1977.

(Contract EY-76-S-06-2343)

(RLO/2343-5 Conf-770921-5) Avail NTIS HC A02/MF A01

An area in central Wyoming was chosen as the test site. The site contained many well-developed eolian landforms and was noted for its high winds. While some members of the research team interpreted satellite imagery and aerial photos and gathered field data in regions of dunes and blowouts, others compiled all available climatic information and collected additional data via low altitude flights with a specially instrumented aircraft. Observed characteristics of eolian features were then correlated with the wind data. Cause-and-effect interrelationships were identified and theoretical models were tested as possible explanations to the observed relationships. Relationships which proved useful in the Wyoming test area were then applied over a broader region and in other areas of the country to test for regional applicability of each predictor. ERA

The research under this contract has been directed mainly toward the understanding of the optical behavior of those composite materials whose components are separated on a scale that is very small (~ 100 Å) compared with the wavelength of light. In the course of this work two types of new materials have been developed (1) semiconductor-insulator composites which may be valuable as selective absorbers of solar radiation in solar thermal applications and (2) electrochromic cermetes which may have applications in a variety of display devices. Comparison of the predictions of two theories -- the Maxwell-Garnett theory (MG) and the effective-medium theory -- with the observed optical behavior of cermetes formed by cosputtering a metal and an insulator clearly favored the MG theory. The optical properties of most Au, Ag, and W cermetes were at least qualitatively described by MG and good quantitative agreement could be obtained in most cases by modifying the published values of the optical constants of the metals to take into account the very short electron-scattering times found in the cermetes. The most notable exception was Au-MgO which did not exhibit the dielectric anomaly. GRA

LASER FUSION-FISSION REACTOR SYSTEMS STUDY.
4000 MW LASER FUSION HYBRID REACTOR

Jan 1977 70 p

(Contract W-7405-eng-48)

(UCRL-13796) Avail NTIS HC A04/MF A01

A hybrid reactor with a sodium-cooled depleted uranium fission blanket and liquid lithium tritium breeding fusion blankets is the central point in a laser fusion-fission reactor power plant. Driven by a selenium gas laser the reactor produces a total of 4000 MWt. This energy is transferred by sodium and lithium coolant systems to steam generators. The thermal energy in the steam is then converted to electrical energy by a modified light water reactor (LWR) steam turbine generator system. A gross electrical output of 1520 MWe is attained. The net electrical output varies between 1195 and 1232 MWe depending upon the changing multiplication of energy in the reactor and the complementary consumption of power by the laser system. Topics covered include (1) reactor design, (2) laser system, (3) power plant concept (4) environment and safety (5) economics, and (6) design options. ERA

Several engine concepts examined to determine a preferred design which most effectively exploits the characteristics of hydrogen fuel in aircraft tanks received major emphasis. Many candidate designs of tank structure and cryogenic insulation systems were evaluated. Designs of all major elements of the aircraft fuel system including pumps, lines, valves, regulators, and heat exchangers received attention. Selected designs of boost pumps to be mounted in the LH2 tanks, and of a high pressure pump to be mounted on the engine were defined. A final design of LH2-fueled transport aircraft was established which incorporates a preferred design of fuel system. That aircraft was then compared with a conventionally fueled counterpart designed to equivalent technology standards. Author

 (Contract NAS3-20374)
 (NASA-CR-159410, PT-5228) Avail NTIS HC A08/MF A01 CSCL 22B

A crossed field amplifier was designed to meet the performance objectives of high signal to noise ratio an efficiency of 85%, a CW microwave power output of 5-8 kW, and a frequency of 2450 MHz. The signal to noise ratio achieved was better than 69 db/MHz in a 2000 MHz band centered on the carrier. High circuit efficiency of 97% and a sharp knee on voltage current characteristic were achieved. The basic problem of maintaining good transfer of heat to the external radiator while providing for adequate connections to input and output was solved. Maximum efficiency achieved was 70.5% and gain and power level were below objectives. An investigation of causes of reduced performance indicated the poor field pattern in the cathode anode interaction area of the tube was a major cause.

A material for a casing packer for service for 24 hours in a geothermal environment was developed by synthesis of new elastomers and formulation of available materials. Formulation included use of commercial elastomer gumstocks and also crosslinking of plastic (high Tg) materials. Fibrous reinforcement of fluorocarbon rubbers was emphasized. Organic fiber reinforcement did not increase hot properties significantly. Glass fiber reinforcement gave significant increase in tensile properties. Elongation was reduced and the glass-reinforced composition examined so far did not hold up well in the geothermal environment. Colloidal asbestos fibers were also investigated. A few experiments with polyphenyl ether gave material with low tensile and high compression set. Available high styrene SBR compositions were studied. Work to date suggests that new synthetic polymers will be required for service in geothermal environments.

 (AD-A055113, NWC-TP-6022) Avail NTIS HC A03/MF A01 CSCL 07/1

This report describes a thermochemical process through which organic waste materials found in municipal trash are converted into a high grade gasoline product. The process involves three major steps: selective pyrolysis to form gases relatively rich in olefins such as ethylene, propylene and butylene, compression and purification of the pyrolysis gases to concentrate the olefins and polymerization of the olefins to form polymer gasoline. Pyrolysis experimentation has resulted in about half of the energy in the organic feed being found in the gaseous olefin pyrolysis product. Polymerization of pure ethylene has produced a synthetic crude oil product containing about 90% gasoline having an unleaded motor octane of 90. Preliminary economic evaluation has shown the process to be suitable for relatively small plant sizes. The projected yield of gasoline and oils is about 0.19 l/kg (46 gal/ton). The process is currently in the bench-scale development stage.

Molecular hydrogen has the long-range capability of being a fuel and an efficient energy carrier (a medium for transporting chemical and/or electrical energy), however, hydrogen is not a primary energy source since it is dependent upon other energy sources for its actual production. In general, these dependent energy sources are thermal energy, electrical energy, and radiant energy. Because of hydrogen's specific chemical and physical properties, its more immediate applications are for aviation fuels, industrial chemical production, industrial and domestic heating, off-peak energy storage, electrical and thermal energy transmission, reduction of metal ores, and synthetic food production. Automotive applications employing hydrogen as a fuel are hindered by its poor volumetric energy storage density. The high cost of hydrogen (about \$2.14/GJ (1977 dollars US)) will prevent its use as standard fuel in the near future. Other synthetic fuels derived from advanced coal-gasification processes or fermentation of organic matter for the production of synthetic natural gas (SNG) or alcohols (Methanol and ethanol) presently appear more practical, and are receiving greater foreign and domestic funding. The greatest impact of hydrogen will be on the future international energy policy of the United States. By reducing a country's dependency on imported energy, hydrogen can greatly affect its military capability and socioeconomic stability. The pendulum is presently swinging towards hydrogen acceptance in industrialized countries dependent upon imported energy resources such as Japan, France, West Germany and Italy. Significant hydrogen research programs presently exist in these Western countries.

THE RELATIVE COSTS OF PRODUCING SYNCRUDE FROM OIL SHALES OF VARIOUS GRADES UNDER VARYING CONDITIONS
 D F Hemming Jan 1978 49 p refs

(ERG-022) Avail NTIS HC A03/MF A01. Secr Energy Res Group, Walton Hall, Milton Keynes Engl

The cost of producing syncrude from oil shales using underground mining and surface retorting and open-pit mining and surface retorting are analyzed. The sensitivity of the calculated cost of production of syncrude to the estimated capital cost of plant and facilities is discussed. The effect on the cost on syncrude production of a labor rate related to the cost of syncrude is also considered. Appendices cover the energy and labor requirements of producing syncrude from oil shales in various ways. ESA

J. Richard Schorr Aug 1977 8 p (Contract EX-76-C-01-2210) (FE-2210-18) Avail NTIS HC A02/MF A01

Heat transfer through refractory lined coal gasification vessel walls was evaluated. An empirically derived computer model suitable for determining the heat flow through complex, multicomponent refractory linings, such that the effect of lining thickness, density composition, anchors, gases was developed. The program involves both the development of a heat flow computer model and the experimental measurement of heat flow in a test apparatus. ERA

N78-31394# Battelle Pacific Northwest Labs., Richland, Wash THERMAL PERFORMANCE MEASUREMENTS ON ULTIMATE HEAT SINKS. COOLING PONDS

R. K. Hadlock and O. D. Abbey Feb 1978 105 p refs (Contract EY-76-C-06-1830) (NUREG/CR-0008, PNL-2453) Avail NTIS HC A06/MF A01

Data were collected to characterize thermal performance of heat sinks for nuclear facilities existing at elevated water temperatures in result of experiencing a genuinely large heat load and responding to meteorological influence. The data reflect thermal performance for combinations leading to Worst-case meteorological influence. A geothermal water retention basin was chosen as the site for the measurement program. The data illustrate the thermal and water budgets during episodes of cooling from an initially high pond water bulk temperature. Monitoring proceeded while the pond experienced only meteorological and seepage influence. The data are discussed and are presented as a data volume which may be used for calculation purposes. ERA

M. Dowdy, A. Burke, H. Schneider, W. Edmiston, G. Klose and R. Heft Jun 1978 51 p refs (Contract NAS7-100) (NASA-CR-157593, JPL-Pub-78-71-Vol-1) Avail NTIS HC A04/MF A01 CSCL 13I

Fuel economy, exhaust emissions, multifuel capability, advanced materials and cost/manufacturability for both conventional and advanced alternative power systems were assessed. To insure valid comparisons of vehicles with alternative power systems, the concept of an Otto-Engine-Equivalent (OEE) vehicle was utilized. Each engine type was sized to provide equivalent vehicle performance. Sensitivity to different performance criteria was evaluated. Fuel economy projections are made for each engine type considering both the legislated emission standards and possible future emissions requirements. A. R. H.

AUTOMOTIVE DIESEL TECHNOLOGY PROGRAM Final Report, Jun 1975 - Apr 1977

Stephen H. Hill Aug 1977 124 p refs (Contract EY-76-C-03-1099) (SAN-1099-1) Avail NTIS HC A06/MF A01

The preliminary design was finalized for a lightweight automotive diesel that can meet ERDA specification goals. Technology included in the concept design can meet the emission and fuel economy goals of 0.41 HC/3.4 CO/0.4 NO/sub x/ and 25 miles per gallon on the Federal Urban Driving Cycle. The major conclusion reached are that a variable compression ratio swirl chamber diesel with variable injection timing and exhaust gas recirculation can (1) achieve emissions of 0.4 HC/3.4 CO/0.4 NO/sub x/ (2) have fuel economy 55 percent better (MPG) than comparable gasoline engines (3) gave an early introduction into production over present gasoline engine lines (4) have a broad fuel tolerance (unleaded gasoline was run) and (5) be smaller in size and comparable in weight to existing gasoline engines. ERA

N78-31440# Maryland Dept of Transportation, Baltimore THE OUTLOOK FOR AUTOMOTIVE FUEL SUPPLIES, ALTERNATIVE VEHICLE ENGINES, AND POTENTIAL IMPLICATIONS FOR TRANSPORTATION TAX STRUCTURES (1985-2000) Final Report

William Barron, Edwin Crawford, and Morton Weinberg Feb 1978 206 p refs Prepared in cooperation with Johns Hopkins Univ., Baltimore (PB-279679/5, FR-2) Avail NTIS HC A10/MF A01 CSCL 13F

Potential developments in automotive fuel supplies, alternatives to the Otto Cycle engine, and implications of projected developments in these areas for state road user tax arrangements are examined. Alternative heat engines, electric vehicles, and fuel cells are considered in regard to the state of their technological development and ability to utilize nonstandard fuels. Alternative taxing arrangements briefly evaluated are BTU based tax on liquid fuels, increased annual registration fees for alternatively powered vehicles, electric flow recharge metering, tax on traction batteries, periodic odometer readings, and road surface checkpoint metering. The author has identified the following significant results. An extension of the trace of the Chaman-Nushki fault was detected and delineated for 42 km, as was the Ornach-Nal fault for 170 km. Two structural intersections responsible for restricted movements in particular segments of the Chaman-Nushki fault were detected and interpreted. The newest and youngest fault named the Quetta-Mustung-Surab system was delineated for 580 km. The igneous complex of the Lasbela area was interpreted and differentiation was made between ultramafic complex, mafic complex, and basaltic lava flows. One oblong feature was also found which was interpreted as a porphyritic basalt plug.

The anomalous coloration of altered rocks associated with tabular uranium occurrences in the San Raphael Swell, Utah, and remnants of roll-front type deposits in the Powder River Basin, Wyoming was studied. Field and Laboratory spectral reflectance studies on these uranium deposits or occurrences were carried out and supplemented with mineralogical and chemical analyses to determine the origin of spectral features observed. The principal alteration products are goethite/limonite (Utah deposits) and goethite/limonite and hematite (Wyoming deposits). The principal clay mineral present in the deposits is montmorillonite. Statistical analysis of the field data was performed using a stepwise linear discriminant function analysis computer program that determines which combinations of input wavelength bands provide best separation of specified groupings of data. Altered and unaltered rocks could be repeated with 95% accuracy using spectral data including all wavelength bands. Of the satellite-simulated wavelength region tests, LANDSAT D bands gave the best classification accuracy. ARH

Shallow pools of liquid to collect low-temperature solar generated thermal energy are described. Narrow elongated trenches, grouped together over a wide area, are lined with a heat-absorbing black liner. The heat-absorbing liquid is kept separate from the thermal energy removing fluid by means such as clear polyethylene material. The covering for the pond may be a fluid or solid. If the covering is a fluid, fire fighting foam, continuously generated, or siloons are used to keep the surface covering clean and insulated. If the thermal energy removing fluid is a gas, a fluid insulation layer contained in a flat polyethylene tubing is used to cover the pond. The side of the tube directed towards the sun is treated to block out ultraviolet radiation and trap in infrared radiation.

A method for chlorinolysis of coal is an organic solvent at a moderate temperature and atmospheric pressure has been proven to be effective in removing sulfur particularly the organic sulfur from coal. Chlorine gas is bubbled through a slurry of moist coal in chlorinated solvent. The chlorinated coal is separated, hydrolyzed and the dechlorinated. Preliminary results of treating a high sulfur (4.77% S) bituminous coal show that up to 70% organic sulfur, 90% hyrcic sulfur and 76% total sulfur can be removed. The treated coal is dechlorinated by heating at 500 C. The presence of moisture helps to remove organic sulfur. Official Gazette of the U.S. Patent Office

A VARIABLE INERTIA FLYWHEEL AS AN ENERGY STORAGE SYSTEM Ph D Thesis

David Gordon Ullman 1978 216 p
Avail Univ Microfilms Order No 7812395

A variable inertia flywheel (VIF) system was designed and fabricated to verify theoretical predictions and to evaluate the basic operating characteristics of the concept. A fully controllable VIF, full control over the moment of inertia irrespective of the VIF state, is not practical as the efficiency obtained can be no better than a fixed inertia flywheel with an infinitely variable ratio transmission. However, a VIF with a fixed power recirculation results in a flywheel with a unique torque/angular rate characteristic. A VIF can theoretically be formed such that the torque is related to any function of angular rate. Dissert Abstr

NTIS, HC A03/MF A01 CSCL 10B

A 6 kW (8 hp) single-cylinder, rhombic-drive Stirling engine was restored to operating condition and preliminary characterization tests run with hydrogen and helium as the working gases. Initial tests show the engine brake specific fuel consumption (BSFC) with hydrogen working gas to be within the range of BSFC observed by the Army at Fort Belvoir, Virginia in 1966. The minimum system specific fuel consumption (SFC) observed during the initial tests with hydrogen was 669 g/kW hr (1.1 lb/hpx hr), compared with 620 g/kWx hr (1.02 lb/hpx hr) for the Army tests. However, the engine output power for a given mean compression-space pressure was lower than for the Army tests. The observed output power at a working-space pressure of 5 MPa (725 psig) was 3.27 kW (4.39 hp) for the initial tests and 3.80 kW (5.09 hp) for the Army tests. As expected, the engine power with helium was substantially lower than with hydrogen. J M S

NTIS HC A02/MF A01 CSCL 10A

A 12 cm diameter by 15 cm long catalytic reactor was tested with No. 2 diesel fuel in a combustion test rig at inlet temperatures of 700, 800, 900 and 1000 K. Other test conditions included pressures of 3 and 6 x 10 to the 5th power Pa, reference velocities of 10, 15, and 20 m/s and adiabatic combustion temperatures in the range 1100 to 1400 K. The combustion efficiency was calculated from measurements of carbon monoxide and unburned hydrocarbon emissions. Nitrogen oxide emissions and reactor pressure drop were also measured. At a reference velocity of 10 m/s the CO and unburned hydrocarbons emissions, and, therefore, the combustion efficiency were independent of inlet temperature. At an inlet temperature of 1000 K they were independent of reference velocity. Nitrogen oxide emissions resulted from conversion of the small amount (135 ppm) of fuel-bound nitrogen in the fuel. Up to 90 percent conversion was observed with no apparent effect of any of the test variables. For typical gas turbine operating conditions all three pollutants were below levels which would permit the most stringent proposed automotive emissions standards to be met. Author

HC A11/MF A01 CSCL 10A

The transfer of steam production from fossil fuel boilers to waste fuel boilers in a paper and pulp mill powerhouse was studied. Data from specific mills were analyzed, and various TES concepts evaluated for application in the process steam supply system. Constant pressure and variable pressure steam accumulators were found to be the most attractive storage concepts for this application. Performance analyses based on the operation of a mathematical model of the process steam supply system indicate potential substitution of waste wood fuel for 100,000 bbl oil per year per installation with the accumulator TES system. Based on an industry survey of potential TES application, which requires excess base steaming capability, the results from the individual installation were extrapolated to a near-term (1980's) fossil fuel savings in the paper and pulp industry of 32 x 1, million bbl oil/year. Conceptual designs of mechanical equipment and control systems indicate installed cost estimates of about \$560,000 per installation, indicating an after tax return on investment of over 30 percent. The engineering manual provides a complete companion documentation about the structure of the main program and subroutines: the preparation of input data, the interpretation of output results, access and use of the program, and the detailed description of all the analytic, logical expressions and flow charts used in computations and program structure. A numerical example is provided and solved completely to show the sequence of computations followed. The program is carefully structured to reduce both user's time and costs without sacrificing accuracy. The user would expect a cost of CPU time of approximately \$5.00 per building zone excluding printing costs. The accuracy, on the other hand, measured by deviation of simulated consumption from watt-hour meter readings, was found by many simulation tests not to exceed + or - 10 percent margin. G G

ALTERNATE POWER SOURCES SESSION NUCLEAR BATTERY HYBRID CONFIGURATION STUDY

Guido Guazzoni 1978 4 p ref Repr from 27th Ann Proc Power Sources Conf Jun 1976
 (AD-A055182) Avail NTIS HC A02/MF A01 CSCL 10/2

Power source requirements for worldwide military applications include a need for low level power (milliwatts average power) under conditions for unattended extended periods of time. The energy content needed in such applications and the requirement for continuous troublefree operation led to the investigation of the military potential of radioisotope thermoelectric power sources, with specific interest in a hybrid configuration using a sealed nickel-cadmium battery. By using the nuclear particle emission energy of radioactive decay nuclear battery devices have the highest stored energy density of any other power source. However, the power output is low being related to the emission half-life of the isotope. Attainment of inherently good device power regulation requires a relatively long life isotope. Plutonium-238 (Pu-238) an 86 year half-life alpha (short range) emitter, has become available in practical quantities. It offers a very low emission hazard and when properly encapsulated in a sintered oxide fuel form it provides an almost ideal isotopic heat source which is safe to use under all anticipated extremes of heat and shock. A study is presented that shows methods to enhance stratification in liquid storage tanks. The report focuses on the development of a passive inlet distributor which minimizes mixing between incoming and stored fluids at unlike temperatures. Theoretical analyses and scale model tests were performed. Computer simulations were used to compare mixed storage with stratified storage in a solar space heating system. Test results showed that in some cases nearly ideal stratification can be obtained, and the computer simulations indicated that the load carrying capability of a solar system may be increased 5-10% through the use of stratified storage. DESIGN AND COST STUDY FOR DEVELOPMENT OF LEAD-ACID BATTERIES SUITABLE FOR ELECTRIC VEHICLE PROPULSION Final Report
 C E Weinlein 1977 126 p
 (Contract W-31-109-eng-38)
 (ANL-K-77-3624-1) Avail NTIS HC A07/MF A01

A design for an improved state-of-the-art (ISOA) battery is proposed. It is believed that this ISOA design is the most efficient design achievable within the constraints of the ISOA battery development program. These constraints include realistic time and financial limitations, and compatibility with existing highspeed production equipment. The ISOA battery is in fact an improved, state-of-the-art lead acid battery for use in an electric vehicle. A durable, light weight polypropylene container and cover complete with single point watering and venting features are incorporated in the ISOA design. A number of materials and process parameters with profound affect on battery performance were chosen after extensive evaluation and cell testing. Development of an advanced lead acid electric vehicle battery involved the evaluation, and application of effective forward concepts in the design of the battery. Many weight-saving designs were incorporated. Significant improvements in active material efficiencies and integrity are required. Author (ERA)

Metal/air fuel cells are reviewed in terms of their potential application in electric vehicles. Attention is focused on those metals (light alkali and alkaline earth metals, and aluminum) which, in combination with oxygen, have theoretical energy densities exceeding that of gasoline. Lithium and aluminum yielded 8- and 4 kWh/kg, respectively, in laboratory experimental cells. The slurry Zn/air system achieves 0.85 kWh/kg-Zn in prototype vehicle cells and is reviewed for comparison. The remaining metals appear to be unsuitable for use in aqueous electrolyte fuel cells. The discharge characteristics of lithium, aluminum, and (possibly) calcium/air cells indicate the potential for electric vehicles of the highway performance and minimum range (300 miles) of subcompact automobiles, rapid refueling for unlimited range extension, and the storage in the fuel cell of sufficient metal for ranges in excess of 1000 miles. The energy efficiency of a transportation system using aluminum was estimated using data on the current aluminum production industry. ERA

DESIGN AND COST STUDY OF A NICKEL-IRON OXIDE BATTERY FOR ELECTRIC VEHICLES. VOLUME 2 PUBLIC REPORT Final Report
 R E Vail 23 Aug 1977 73 p
 (Contract W-7405-eng-38)
 (ANL-K-3723-1) Avail NTIS HC A04/MF A01

A nickel iron oxide battery design concept is proposed. Development problems were addressed and the methods of solution, identified. The manufacturing cost of the proposed design is identified for annual production quantities of 1,000, 10,000, and 100,000 25 kWh batteries. Based on the high-volume estimates of material, labor, and capital requirements, a selling price of \$60/kWh was found to be attainable. Battery test requirements were identified which will serve to define the performance characteristics of interest to a potential user. A follow-on R and D program plan was developed which combines significant electrode and cell development with demonstrations of performance and potential costs in the form of prototype hardware. ERA

THERMAL AND KINETIC ANALYSIS OF THE PYROLYSIS OF COALS Final Report
 V V Hathi and C M Sliepcevich Aug 1977 253 p refs
 (EPRI Proj 368-1)
 (EPRI-AF-528) Avail NTIS HC A12/MF A01

The thermal decomposition (pyrolysis) of nine bituminous coals of the United States was investigated in a nitrogen atmosphere. Weight loss and rate of weight loss were measured at various heating rates. The major devolatilization occurred between 300 C and 700 C with the peaks shifting to higher temperatures at faster heating rates. Kinetic parameters for each heating rate were derived from these measurements by means of a model which has been used successfully to describe the pyrolysis of woods and wildland fuels. Energetic effects during pyrolysis were measured directly up to 727 C on a Perkin-Elmer differential scanning calorimeter. The decomposition of bituminous coals is endothermic up to 500 C and exothermic thereafter. The energy of pyrolysis is more exothermic with decreasing heating rates. Quantitative repeatability of these energetic measurements was less than desired because of baseline shifts arising from condensation of decomposition products on the surfaces of the sample holder. HOT DRY ROCK, AN ALTERNATE GEOTHERMAL ENERGY RESOURCE A CHALLENGE FOR INSTRUMENTATION
 B R Dennis and E H Horton 1978 14 p refs Presented at 24th Intern Instrumentation Symp., Albuquerque, N Mex 1 May 1978
 (Contract W-7405-eng-36)
 (LA-UR-78-707 Conf 780503-8) Avail NTIS
 HC A02/MF A01

The hot dry rock that composes most of the earth's crust has the potential of becoming one of the largest reservoirs of energy economically available in the near future. A technique to demonstrate the technical and economic feasibility of extracting heat from the hot dry rock source is reported that depends upon the connection of two deep boreholes drilled into impermeable precambrian granite where the temperature approaches

200 C The boreholes are connected by a system of hydraulic-produced fractures. Cold water flowing down the deeper hole is heated by the hot rock and brought to the surface through the second hole. The hot water is circulated through a closed-loop heat exchanger. For optimum extraction of energy from this man-made geothermal reservoir it is vital that the absolute location of the fractured system be well established. Fracture mapping techniques include an array of downhole instrumentation. ERA

N78-31554# National Academy of Sciences - National Research Council. Washington D C. Ad Hoc Panel on Low-Btu Gasification of Coal.

ASSESSMENT OF LOW- AND INTERMEDIATE-Btu GASIFICATION OF COAL

Dec 1977 114 p refs

(Contract EX-76-C-01-1216)

(FE-1216-4) Avail NTIS HC A06/MF A01

Low- and intermediate-Btu gases made from coal may be used instead of natural gas or oil in electric power generation and industrial plants. Low-Btu gas cannot be stored economically or transmitted over appreciable distances. Production of low-Btu gas from coal may increase energy costs by approximately 200 percent above the cost of the coal. The overall thermal efficiency of the process is estimated to be about 70 to 80 percent based on cold gas purification. The use of intermediate-Btu gas involves fewer problems than the use of low-Btu gas since the heating value of the gas is high enough to reduce flame temperature limitations and feed gas volumes. It is estimated that the use of intermediate-Btu gas would raise fuel costs 200 to 300 percent above the cost of the coal. The thermal efficiency of the process is 65 to 70 percent based on gas purification at temperatures below 120 C. For the equivalent amount of energy, intermediate-Btu gas is estimated to cost 65 to 75 percent of the cost of pipeline gas produced from coal. A number of other conclusions are listed. ERA

ENERGY ANALYSIS OF MODELS OF THE UNITED STATES, NARRATIVE

Howard T. Odum. In its Energy Analysis of Models of the US 15 Oct 1977 p 1-18

Avail NTIS HC A19/MF A01

Energy bases for the United States were investigated by developing models making quantitative evaluations, and using simulations to understand trends. Concept of energy quality, energy spectra and structure of surviving patterns were studied. Net energies and energy quality factors were calculated with several methods and compared for coal, oil shale, water advection, catastrophes, farming inputs, soils, housing, trade and main flows of biosphere. Models were evaluated from the state of Florida showing its basis in renewable and purchased energies. G G

COMPARISON OF ENERGY ANALYSIS OF OIL SHALE

George M Gardner *In its* Energy Analysis of Models of the US 15 Oct 1977 p 174-212 refs

Avail NTIS HC A19/MF A01

Available data and projections on net energy of oil shale were studied. Included is an energy analysis of oil production at a pilot plant near Rifle, Colorado. A review of seven net energy analyses of proposed and projected oil shale operations showed yield ratios claimed from 68 to 198 as compared to 6 for purchase of foreign oil. G G

N78-31564# Florida Univ , Gainesville

ENERGY ANALYSIS AND MODELS OF SOIL FORMATION

Edward J Regan Jr *In its* Energy Analysis of Models of the US 15 Oct 1977 p 213-260 refs

Avail NTIS HC A19/MF A01

Solar energy costs of soil energy storages were evaluated based upon an energy analysis of soil forming factors. Estimates of the calorie value of soil parameters and the rate of soil formation. The rates of soil formation were derived from literature values and a simulation model of soil formation. The results of the above analyses allow the energy storages of soil to be expressed in solar and coal equivalents. G G

N78-31566# Florida Univ , Gainesville

ENERGY-QUALITY CALCULATIONS FOR FRESHWATER CHEMICAL POTENTIAL

Robert Costanza *In its* Energy Analysis of Models of the US 15 Oct 1977 p 287-296 refs

Avail NTIS HC A19/MF A01

The energy quality of fresh water chemical potential is defined as the relative ability of fresh water to do work in the production processes of the earth. The first calculation was based on process analysis in which specific energy process inputs are traced back to a common source. A biosphere approach determined the cost in solar calories of producing fresh water from rain by the ratio of total input of solar calories to the biosphere to the total quantity of rain produced. A third method of calculation was based on economic input-output analysis and yielded an estimate of the total embodied fossil fuel energy in products. A marginal productivity approach evaluated a substance's ability to do work in specific interactions by production functions. G G

N78-31568# Florida Univ , Gainesville

A HISTORIC AND CURRENT ENERGY ANALYSIS OF FLORIDA

Neil Sipe *In its* Energy Analysis of Models of the US 15 Oct 1977 p 313-337 refs

Avail NTIS HC A19/MF A01

Energy circuit models were used to analyze Florida's current energy base as well as three periods of the state's past. These three periods, primitive, colonial, and limited agriculture, were delineated based upon primary energy sources. It is shown that Florida's growth was greatly accelerated due to the effects of war and that the state exports luxury items to the rest of the U S in exchange for fossil fuels. G G

STATISTICAL TEST OF ENERGY MODELS FOR PREDICTION OF URBAN GROWTH IN FLORIDA

Edward J Regan Jr *In its* Energy Analysis of Models of the US 15 Oct 1977 p 338-369 refs

Avail NTIS HC A19/MF A01

A model of additive energy input to a logistic balance of input and losses provided the best correlation for predicting urban growth based on energy flows. Included were vegetation and urban production processes. The natural energies were shown to enter directly into the soil and urban production processes from the outside. G G

N78-31570# Florida Univ , Gainesville

SOME ASPECTS OF ENERGY USE IN HOUSING

Mark Brown and Larry Arrington *In its* Energy Analysis of Models of the US 15 Oct 1977 p 400-413 refs

Avail NTIS HC A19/MF A01

Energy calculations are reported for a house unshaded in summer and equipped with solar hot water heating. The energy flows represent the energy required to cool the structure as a result of unshaded, exposed roof, and east, south, and west walls and the energy cost of heating hot water with a solar heater, and also for a shaded home equipped with electric hot water heating. The difference between the shaded and unshaded house is the energy cost of maintaining a solar collector on the roof. It is shown that the energy savings for a solar collector in South Florida are 24.1 x 1 million kcal for 10 years. When the difference in the cost of cooling an unshaded house is subtracted from this energy savings, the savings are substantially reduced. G G

N78-31571# Florida Univ , Gainesville

ENERGY ANALYSIS AND MODEL OF INTERMEDIATE AGRICULTURE

Michael S Burnett *In its* Energy Analysis of Models of the US 15 Oct 1977 p 414-429 ref

Avail NTIS HC A19/MF A01

An energy analysis of a 160 acre low-energy homestead in Arkansas was performed. Low quality solar-driven natural energies were upgraded via the farm system to high quality meat products, which were exchanged for goods and services necessary to maintain the durable technology of the system. Animals grazing on natural improved pasture were the focal point of the energy flows. Wood use for heating, a large garden providing vegetables and fruit for fresh consumption and storage, and several small grain patches were considered important energy conservative habits. Results shown that fossil fuel energy requirements of this family are 15 percent of the American average. G G

N78-31572# Florida Univ , Gainesville

ENERGY ANALYSIS OF BRAZIL

Howard T Odum *In its* Energy Analysis of Models of the US 15 Oct 1977 p 430-440 refs

Avail NTIS HC A19/MF A01

An energy model for the accelerated growth of the Brazilian economy is reported that utilizes statistical data to evaluate overall flows of money and energy in relation to coal equivalents. A summarizing diagram shows that high quality energies of the urban development are made up of hydroelectric power and a free input of renewable resources of the sun because of the large geographic area. The renewable sunlight with its auxiliary energy of the land, soil, rain, and wind contributes six times as much energy in coal equivalents as recognized in the statistical summary of other energies. DOUBLE-EXPOSURE COLLECTOR SYSTEM Technical Progress Report, 30 Sep - 30 Dec 1977

Donald C Larson and F William Savery 14 Feb 1978 21 p

(Grant EG-77-G-04-4089)

(TID-28291) Avail NTIS HC A02/MF A01

A retrofit solar water-heating system was installed in a three-story apartment building at Drexel University. The system employs two conventional collector banks (10 PPG collectors) mounted at the latitude angle for Philadelphia of 40 deg from the horizontal and two double-exposure collectors (DEC's) mounted vertically in mirrored enclosures. The performance of the DEC units relative to conventional collectors has been calculated for both a fixed-mirror and an adjustable-mirror configuration. Instrumentation for testing the DEC units performance has been developed and is presently being installed in the apartment building. Preliminary measurements have been obtained, however, of the useful heat output of the DEC units relative to the PPG collectors; these data were obtained on two clear and cold days in December 1977. On these days the DEC units delivered 5.6 to 9.1 times more heat per panel area than the PPG collectors as the PPG collector efficiency varied from 30.2% to 11.9%.

GIROMILL WIND TUNNEL TEST AND ANALYSIS. VOLUME 1. EXECUTIVE SUMMARY Final Report, Jun. 1976 - Oct. 1977

W A Moran Oct 1977 20 p refs

(Contract EY-76-C-02-2617)

(COO-2617-4/1-Vol-1) Avail NTIS HC A02/MF A01

Data from wind tunnel tests are compared with the Larsen cyclogiro vortex theory program employed for predicting the Giromill performance. The Giromill model had a rotor diameter of 7 ft (2.13 meters) and a solidity (total blade area divided by rotor span times diameter) of 0.3. This was achieved by a three bladed rotor having blade chords of 8.4 in (21.3 cm) and a span of 5 ft (1.52 meters). The blades were modulated by use of replaceable cams, that simulated the various operating conditions, and a push rod arrangement connected to a bellcrank about the blade pivot point. Rotor RPM control was achieved with an electric motor/generator that could be used to either drive the rotor or absorb the rotor power to maintain RPM.

 Jul 1977 115 p refs
 (Contract EY-76-C-05-5159)
 (ORO-5159-10) Avail NTIS HC A06/MF A01

TES bed material useful in the 120 to 140 C temperature range suitable for solar absorption air conditioning applications was developed. A Si-O-Si cross-linked HDPE pellet material, demonstrated to have a high heat of fusion value was tested. On melt/freeze cycling of these TES pellets through 400 cycles in ethylene glycol they retained nearly 100% of their initial heat of fusion value, and had excellent form-stability characteristics, with little or no inter-particle adhesion. Testing of this TES pellet material, from analytical to a one gallon lab-scale TES unit and finally to a 60 gallon prototype TES demonstration unit consistently verified these results. C-C crosslinked PE products, which were slightly inferior to the Si-O-Si crosslinked PE in terms of good heat of fusion and form-stability properties, were also developed and are potential alternatives to the prime PE TES product. A state-of-the-art review on the characterization of organic and elemental substances in energy-related liquid and solid effluents was conducted. Reviewed were data on chemical elements and organic compounds in solid waste and aqueous effluents from (1) coal liquefaction and gasification plants, (2) coal fired power plants, (3) oil shale processors, (4) oil refineries (5) coal mines and (6) geothermal energy. Samples for organic and mercury analysis were subjected to a single analytical protocol in each case to permit comparison among samples. Organic constituents were analyzed by gas chromatography/mass spectrometry/computer and elemental components were determined and measured by spark-source mass spectrometry. GRA

The use of humic acid (HA) (a constituent of low rank coal) and fly ash (FA) as potential scrubber chemicals for the treatment of water pollution arising from coal combustion effluents is investigated. HA is characterized and purification processes are described. Cation binding by HA is believed to occur via 3 main mechanisms: (1) ortho-phenolic-carboxylic chelation, (2) intra- and intermolecular exchange of acidic groups having appreciable acidity, and (3) exchange following hydrolysis of groups on HA. The mechanism of absorption of SO₂ (a primary constituent of coal combustion effluents) by sodium humates is detailed. Conclusions are an HA-FA system is feasible, HA is effective in dissolving FA, and HA-FA solutions absorb SO₂ well. GRA

The results of a program to provide quantitative data on combustion emissions from high-temperature low-Btu gas are given. The experimental results were gathered from a pilot-scale furnace fired with a movable-vane boiler burner at a heat input of 0.66 MW (2.25 million Btu/hr). The gases tested in this program--Winkler oxygen, Koppers-Totzek oxygen, and Wellman-Galusha air--ranged from 5.8 MJ/cu m (156 Btu/cu ft) to 9.9 MJ/cu m (266 Btu/cu ft). Measurements were made of NO emissions, temperatures within the flame, and flame emissivity. A mathematical model was used to predict the efficiencies of the furnace with the various fuels; the model agreed well with the experimental measurements. The NO emissions of the gases tested were ordered by the adiabatic flame temperature. GRA

In recent years considerable interest has developed in the use of geothermal energy. However, much of the exploration technology which exists to find and delineate the features of geothermal systems is in its infancy. Several electrical techniques as applied to geothermal exploration are divided into three independent parts. A natural field electrical exploration technique, the E-field ratio telluric method, is described in Part 1. Two dimensional numerical model study and comparison of the polar dipole-dipole and Schlumberger resistivity arrays is described in Part 2. A detailed interpretation of E-field ratio telluric dipole-dipole resistivity mapping, and dipole-dipole resistivity data obtained in the course of geophysical exploration of the Leach Hot Springs area of Grass Valley, Nevada is discussed in Part 3.

(ORAU/IEA(M)-77-29) Avail NTIS HC A03/MF A01

The preliminary results of the Institute's examination of the technical and institutional ways of preserving the nuclear option are presented. The main preliminary finding is that nuclear energy ought to be confined to relatively few sites with existing nuclear sites serving as the basis for such a policy. The key elements of a highly collocated system are described with emphasis on strengthened security, professionalism of nuclear personnel, establishment of generating consortia, institutional longevity, and the transition from the LWR-based system to the asymptotic breeder-based system. Brief summaries of the supporting studies in the areas of safety, siting, waste management, legislative and regulatory aspects, and proliferation issues are also included. ERA

AXIAL FIELD LIMITATIONS IN MHD GENERATORS
 Ph.D Thesis

William Charles Unkel, Jr 1978 393 p
 Avail Univ Microfilms Order No 78-14215

The results of an experimental and analytical investigation of axial field breakdown in non-slugging wall, combustion-driven MHD generators are presented. Some experiments and analysis were performed for a segmented Faraday generator, however more detail for a simplified configuration in which a voltage was applied to a pair of adjacent electrodes in the absence of a magnetic field were performed. Significant improvements in generator performance can result from prevention of breakdown is shown. Non-slugging wall generators careful thermal design of the inter-electrode region should alleviate the problem of insulator initiated breakdown is indicated. The results also indicate that for both plasma and insulator initiated breakdown reducing the electrode pitch at fixed average current density to the electrode increases for the resistance of channel to breakdown.

 CSCL 05C

The methodology of cost-benefit analysis is reviewed and a case study involving solar cell technology is presented. Emphasis is placed on simplifying the technique in order to permit a technical person not trained in economics to undertake a cost-benefit study comparing alternative approaches to a given problem. The role of economic analysis in management decision making is discussed. In simplifying the methodology it was necessary to restrict the scope and applicability of this report. Additional considerations and constraints are outlined. Examples are worked out to demonstrate the principles. A computer program which performs the computational aspects appears in the appendix. LS

The study on utilization of advanced composites in commercial aircraft wing structures was conducted as a part of the NASA Aircraft Energy Efficiency Program to establish, by the mid-1980s, the technology for the design of a subsonic commercial transport aircraft leading to a 40% fuel savings. The study objective was to develop a plan to define the effort needed to support a production commitment for the extensive use of composite materials in wings of new generation aircraft that will enter service in the 1985-1990 time period. Identification and analysis of what was needed to meet the above plan requirements resulted in a program plan consisting of three key development areas: (1) technology development, (2) production capability development, and (3) integration and validation by designing, building and testing major development hardware. LEAN LIMIT COMBUSTION IN AN EXPANDING CHAMBER
 Ph.D. Thesis

Owen Irby Smith 1977 140 p
 Avail Univ Microfilms Order No 78-12782

The propagation of methane-air flames in an enclosure designed to simulate conditions encountered in an internal combustion engine was investigated. As the lean flammability limit is approached, the typical automotive engine exhibits an increase in unburned hydrocarbon emissions along with an increase in specific fuel consumption which is characteristic of incomplete combustion. Emphasis was placed on experimental conditions where incomplete combustion in the bulk gas (as opposed to the thermal boundary layer) due to quenching of hydrocarbon oxidation reactions by volume expansion was observed. Cases involving flame propagation in a constant volume chamber, an expanding chamber, and a chamber subjected to a compression-expansion sequence were investigated. The amount of volume expansion is found to be directly related to the occurrence of bulk quenching, while the rate of volume expansion is not.

USE OF THE JET FUEL THERMAL OXIDATION TESTER (JFTOT) FOR PREDICTING DIESEL FUEL PERFORMANCE
 Interim Report

Maurice E LePera and Fred McCaleb Mar 1978 14 p refs
 (AD-A055421 MERADCOM-2235) Avail NTIS
 HC A02/MF A01 CSCL 21/4

An investigation was conducted to define the feasibility for using the Jet Fuel Thermal Oxidation Tester (JFTOT) as a laboratory predictor to assess diesel fuel quality relative to operating performance. A methodology was subsequently established to define diesel fuel performance relative to filter pressure differentials at limiting operating temperatures. A variety of diesel fuels and candidate additives were screened using this approach. The modified JFTOT did effectively screen and discriminate between the fuels as a result of their composition, hydrocarbon quality, and possible contaminants.

The water tolerance of the methanol/1-octane/benzene system was studied, including the effect on the water tolerance of the presence of selected additives. The conclusion that methanol/gasoline/1-butanol blends can be obtained of adequate stability for commercial distribution is derived. Results show that the use of emulsifying agents to achieve stable blends is not technically possible at the present time. The corrosive effect of methanol on the materials currently used in vehicle fuel systems and in the fuel distribution system is discussed. It is recognized that the introduction of methanol/gasoline blends could create problems in the area of materials compatibility vis-a-vis gasoline and it is recommended that additional work be initiated to provide more detailed information than is presently available. The problem of increased vapor pressure and methods of distribution of methanol/gasoline blends are noted. Results of initial experimental work undertaken with a single cylinder Ricardo engine are described. The need for further extensive work is indicated, however, both with single cylinder and multicylinder engines.

In furthering the development of hydrogen energy technology it is essential to test both major and supporting components on a practical scale. The Hydrogen-Technology Advanced-Component Test System (HYTACTS) is being constructed to fulfill this need. Components for production of hydrogen by electrolysis, storage of hydrogen as a metal hydride, and use in several types of energy conversion devices will be tested and evaluated. The first application to be evaluated uses hydrogen as an energy carrier in an electric-energy storage system. Off peak or spinning reserve power is used to electrolyze hydrochloric acid, the hydrogen and chlorine are stored for recombination in the same cell when the demand for power exceeds the system capacity. Hydrogen stored in containers of hydride will also be tested for use as an automotive fuel. The program phases are described along with some details on the equipment to be tested in the hydrogen storage section of the system now being constructed.

The combustion data needed to retrofit existing industrial burners to low and medium Btu fuel gases were provided. The pilot-scale furnace was modified to allow the insertion of cooling tubes to provide an adjustable furnace load. This allows the furnace to simulate a variety of industrial processes. A special gas generating system for producing the necessary low and medium-Btu gases was constructed. A Bloom baffle burner, representative of the forward flow type of burner, was installed as the first type of burner to be tested. The cooling tubes were adjusted to simulate the load in the preheat zone of a five-zone steel slab reheat furnace and natural gas baseline data were collected with an input of 5.25 million Btu/hr. The combustion trials included measurements of the thermal efficiency, heat absorption profile, flame shape, flame temperatures, resonance noise level, and flow direction profiles. The thermal efficiencies were 35% for natural gas, 26% for KTO, 23% for WGA, and 22% for WA.

Experimental fixed bed hydroprocessing data were used to estimate costs for a 20 MB/SD hydrotreater including waste water treater and sulfur plant using both utility and equity methods of financing. The costs of upgrading the five coal liquids from the H-Coal and Solvent Refined Coal (SRC) processes vary from \$0.34 to \$2.59/MMBTU of liquid fuel product with utility financing (1976 dollars, 0 percent/year inflation) and \$0.38 to \$2.87/MMBTU with equity financing (1980 dollars 5 percent/year inflation). Cost is a function of the raw coal liquid quality and the hydroprocessing severity necessary to achieve a given product quality. Approximately one-half of the processing cost is for hydrogen input, the other half is about equally divided between capital recovery and operating costs. Capital investment, ranged from \$39 MM to \$273 MM for utility financing (1976 dollars) and \$45 MM to \$308 MM for equity financing (1980 dollars). ERA

Solvent refined coal (SRC) products from the Wilsonville, Alabama and Tacoma, Washington liquefaction facilities were characterized by a broad range of chemical methods. Analytical procedures were established to analyze feed and products from the hydroprocessing of these SRC materials in a unit designed and built specifically for processing residual materials. Authentic and synthetic filtrates were processed upflow in hydrogen over three different commercially available catalysts. Residual (greater

than 850 F boiling point) SRC conversions up to 46 wt percent were observed under typical hydrotreating conditions on authentic filtrate over a cobalt molybdenum catalyst. A synthetic filtrate comprised of creosote oil containing 52 wt percent Tacoma SRC was used for evaluating nickel molybdenum and nickel tungsten catalysts. Nickel molybdenum on alumina catalyst converted more 850 F+ SRC, consumed less hydrogen and produced a better product distribution than nickel tungsten on silica alumina. ERA

A partial oxidation reactor was scaled-up to evaluate the potential for producing an ammonia synthesis gas from cattle feedlot residue. The synthesis gas from the reactor can be further processed to produce ammonia, using existing commercial technology. A 2.5 meter long, falling-bed reactor was designed, constructed, and operated along with supporting feed and recovery equipment. Manure feed rates to the reactor ranged from 7.7 to 23.6 kilograms per hour. The results show that significant yields of an ammonia synthesis gas and ethylene can be produced in the same reactor when the system is fed with a mixture of air, steam, and manure. GRA

DEVELOPMENT OF A DIRECT CONTACT HEAT EXCHANGER, PHASE 1 STUDY REPORT

Ram Manvi 30 Sep 1978 75 p refs
 (Grant NSG-7229)

(NASA-CR-157737, ME-78-NSG-7229) Avail NTIS HC A04/MF A01 CSCL 20D

Electric power generation from geothermal brine requires, first, bringing the hot brine to the surface and then converting the heat to electric power. Binary conversion schemes were proposed, with the heat transfer between the brine and the working organic fluid taking place in a conventional tube and shell heat exchanger. If the brine is heavily laden with dissolved

solids, however, solids buildup on the heat exchanger surfaces leads to a considerable degree of fouling and an accompanying drop in performance is experienced. A possible solution to this problem is the use of a direct contact exchanger with the secondary fluid power cycle. The proposed concept involves the formation of fluid sheets and bells as heat angles. Results of a study concerning the fluid mechanics of such surfaces are given. GG

AUTOMOTIVE FUEL ECONOMY AND EMISSIONS PROGRAM Final Report, Jun 1975 - Dec. 1976

Mack W Dowdy and Ronald L Baisley Jun 1978 209 p refs Sponsored in part by NASA

(Contract DOT-RA75-41)

(NASA-CR-157604, JPL-Pub-78 21)

Avail NTIS HC A10/MF A01 CSCL 13I

Experimental data were generated to support an assessment of the relationship between automobile fuel economy and emissions control systems. Tests were made at both the engine and vehicle levels. Detailed investigations were made on cold-start emissions devices, exhaust gas recirculation systems, and air injection reactor systems. Based on the results of engine tests, an alternative emission control system and modified control strategy were implemented and tested in the vehicle. With the same fuel economy and NOx emissions as the stock vehicle, the modified vehicle reduced HC and CO emissions by about 20 percent. By removing the NOx emissions constraint, the modified vehicle demonstrated about 12 percent better fuel economy than the stock vehicle. GG

INVESTIGATIVE STUDY OF ENGINE LIMITING

R L Bechtold Feb 1978 19 p refs

(BERC/RI-77/13) Avail NTIS HC A02/MF A01

The effect of cylinder cut-out or engine limiting on fuel consumption and exhaust emissions for a V-type 8-cylinder engine was determined. Increases in energy conversion efficiency while operating with only 4 cylinders ranged from 10 to 40% compared to operation with 8 cylinders at the same power outputs. The speeds and loads chosen were representative of those required to operate a 4500-lb vehicle at speeds up to 60 mph. Hydrocarbon emissions increased at low speed/load points under 4 cylinder operation. An insignificant change in carbon monoxide emissions was observed while an increase in oxides of nitrogen emissions resulted at the higher speed/load points. ERA

REMOTE SENSING OF STRIPPABLE COAL RESERVES AND MINE INVENTORY IN PART OF THE WARRIOR COAL FIELD IN ALABAMA Final Report

Thomas J Joiner, Charles W Copeland, Jr., Donald D Russell, Francis E Evans, Jr., C Daniel Sapp, and Peter A Boone Jul 1978 128 p refs

(Contract NAS8-31573)

(NASA-CR-150781) Avail NTIS HC A07/MF A01 CSCL 08G

Methods by which estimates of the remaining reserves of strippable coal in Alabama could be made were developed. Information acquired from NASA's Earth Resources Office was used to analyze and map existing surface mines in a four-quadrangle area in west central Alabama. Using this information and traditional methods for mapping coal reserves, an estimate of remaining strippable reserves was derived. Techniques for the computer analysis of remotely sensed data and other types of available coal data were developed to produce an estimate of strippable coal reserves for a second four-quadrangle area. Both areas lie in the Warrior coal field, the most prolific and active of Alabama's coal fields. They were chosen because of the amount and type of coal mining in the area, their location relative to urban areas, and the amount and availability of base data necessary for this type of study. AN ECONOMETRIC ANALYSIS OF THE ROLE OF AIR AND WATER RESIDUALS IN THE PRODUCTION TECHNOLOGY FOR STEAM-GENERATING ELECTRIC PLANTS
 Ph.D. Thesis

Tran Thi Ngoc Bich 1977 221 p
 Avail Univ Microfilms Order No 78-05543

A production technology model was developed (1) to assess the role of air- and water-borne residuals in the production technology of the plants, (2) to estimate the partial elasticities of substitution between labor and fuel, (3) to test input homotheticity of the production technology (4) to test the hypotheses of separability between the joint outputs (i.e., electricity and residuals emissions) and factor inputs (labor and fuel). Estimates of the role of air- and water-borne emissions in the ex post production technology for the 128 fossil-fuel fired steam-generating plants constructed during the period of 1948 to 1968 in the United States are presented. The overall results strongly support the inclusion of both air- and water-borne residuals measures in estimating the nature of the production technology for fossil-fuel plants for all vintages. THE FEASIBILITY OF SOLAR HOUSE HEATING A STUDY IN APPLIED ECONOMICS Ph.D. Thesis

Ali Shams 1977 120 p
 Avail Univ Microfilms Order No 7804312

The performance of a solar heating system for the average single family house in St Louis, Missouri was examined. The optimal mix of solar and conventional forms of heating, taking into account the factors of climate, heat loss coefficient of residential structures, fuel costs, and capital costs associated with solar heating systems of varying sizes was determined. A simulation model was used to measure the annual performance of a solar heating system design of varying capacities. The optimal mix of solar and conventional heat sources was found where the present value of the savings on conventional fuel, taken over the life of the system, is equal to the cost of the system at the margin. The present value of the marginal savings on conventional fuel resulting from the utilization of the solar heating system was compared with the capital cost of the system. Dissert Abstr

 (Contract NAS3-20818)
 (NASA-CR-135429, C-81173) Avail NTIS HC A10/MF A01 CSCL 10A

The fuel cell energy systems are designed with and without a utility connection for emergency back-up power. Sale of electricity to the utility during periods of low plant demand is not considered. For each of the three industrial applications, conceptual designs were also developed for conventional utility systems relying on purchased electric power and fossil-fired boilers for steam/hot water. The capital investment for each energy system is estimated. Annual operating costs are also determined for each system. These cost estimates are converted to levelized annual costs by applying appropriate economic factors. The breakeven electricity price that would make fuel cell systems competitive with the conventional systems is plotted as a function of naphtha price. The sensitivity of the breakeven point to capital investment and coal price is also evaluated. Author

ECONOMIC ANALYSIS OF POTENTIAL USES OF GEOTHERMAL ENERGY IN AGRICULTURE

Bruce W Cone Feb 1978 78 p refs
 (Contract EY-76-C-06-1830)
 (PNL-2568) Avail NTIS HC A05/MF A01

The economic feasibility and water quality considerations of the cultural practice of soil warming was evaluated using existing technical agronomic, and economic data. It was hypothesized that it is technically and economically feasible to use geothermal energy in the cultural practice of soil warming for specific crops. The analysis attempted to reject the hypothesis. Since the hypothesis could not be rejected, the results are presented as a profit equation suitable for inclusion in the GEOCOST computer program. This determination of economic feasibility utilized heterogeneous crop yield data by comparing the elasticity of response with a normalized product-factor price ratio. Soil warming was determined to be feasible when the elasticity of production was equal to or greater than the normalized product-factor price ratio. ERA

(EPRI-EA-621-SR-Vol-1) Avail NTIS HC A05/MF A01

Forecasts of end-use consumption of electricity, petroleum, natural gas and coal for the years 1980 to 2000 are presented. The forecasts are based on an econometric model whose equations represent energy consumption of each form of energy in each end-use sector. The forecasts are based on a forecast of longrun economic growth coupled with three scenarios concerning energy prices and conservation policy. Each of the scenarios was coupled with two scenarios concerning natural gas availability, one in which natural gas is freely available at the assumed price. Forecasts are presented for each of the sectors and for each of the forms of energy by five-year periods. The structure of the econometric model is described along with plans for further development. A space-heating energy-consumption model for Greeley, Colorado for the winter of 1976-77 was within 98.9 percent of actual natural gas consumption for that city. Modeling of Cheyenne, Wyoming, including the testing of a new statistical scheme to develop the building census required by the energy consumption model, has progressed to the point where reliable natural gas consumption estimates can be made with the model for that community. A detailed study of temperature and surface wind patterns in and near the city of Greeley, Colorado revealed that, at times, an urban heat island effect is present, in spite of the relatively small size of that town. Various feedback mechanisms between the oceans and the atmosphere were examined. Several of these mechanisms appear to be the cause of the interannual variability of the atmosphere's general circulation and of climatic changes on a time scale of several tens of years. To advance regional long-range forecasting skills, January temperature anomalies over the eastern United States were correlated with flow patterns over the U.S. and Canada. ERA

MINIMIZING CONSUMPTION OF EXHAUSTIBLE ENERGY RESOURCES THROUGH COMMUNITY PLANNING AND DESIGN Final Report

Oct 1977 149 p refs

(Contract EY-76-C-06-2332)

(RLO-2332-1) Avail NTIS HC A07/MF A01

A study was performed in the State of Alaska and numerous consultants on energy conservation techniques which could be applied to the planning, design, and construction of a new community in the northern climates. This study focused on the minimizing of exhaustible energy resources through planning and design of this new capital city. It was found that the major determinants to energy consumption in a community are the land-use patterns, which affect intracity transportation and utilities distribution, and the built density of the individual homes and buildings which affects heat losses. Configuration of the community also affects the savings that may be realized through the use of district heating and other energy-conserving technologies. ERA

PERFORMANCE EVALUATION OF A LOW-FIRST-COST, THREE-TON, AIR-TO-AIR HEAT PUMP IN THE HEATING MODE

Albert A Domingorena 1978 40 p ref Presented at the 3d Ann Conf on Heat Pump Technol Stillwater Okla 10-11 Apr 1978

(Contract W-7405-eng-26)

(CONF-780429-1) Avail NTIS HC A03/MF A01

The thermal performance of a three-ton air-to-air heat pump was evaluated in the laboratory under steady-state (no frost) and frosting conditions. In both cases the heating capacity and the coefficient of performance were computed. During frosting conditions, there was a significant decrease in the outdoor airflow rate through the outdoor coil and this resulted in the decrease in the heating capacity and the coefficient of performance. Results indicate the importance of considering the effect of frost accumulation on the outdoor coil. There may be a significant reduction in thermal performance when the outdoor conditions result in substantial formation of frost on the coil and fins of the outdoor unit. Characteristic curves of both fan-motor units indicate that improvement of the efficiency of the units would reduce the operating costs during the life of the heat pump system with a relatively small increase in the fan-motor unit first cost. ENERGY INTERDEPENDENCE. TODAY AND TOMORROW

J N Barkenbus Apr 1978 35 p refs

(Contract EY-76-C-05-0033)

(ORAU/IEA(O)-78-3) Avail NTIS HC A03/MF A01

The current fossil fuel era, differs substantially from the wood-based energy system. Large institutions are now responsible for satisfying the consumer's energy needs, long distances often separate resource exploitation from resource consumption, and governments now play. The finite nature of fossil fuel resources has created a precarious network of global energy trade and led to serious vulnerabilities within the industrial nations. Future energy systems, based upon nuclear and solar technologies, will make use of fuels which, unlike fossil fuels, are abundant and ubiquitous. An energy future free from the limitations and vulnerabilities associated with the fossil fuel era is envisioned. For numerous reasons, however, utilization of these technologies--over the next half century or so--will require interaction among nations. As a consequence, energy interdependence, rather than national energy independence, is likely to predominate well into the twenty-first century. ERA

It is often argued that, as economic growth proceeds, service industries will inexorably displace basic manufacturing. If true, and if it is accepted that goods production requires less energy than services, the result will be a decline in energy needs resulting strictly from a secular readjustment of consumption. It was found that such projections are generally over-optimistic, energy savings from structural changes in consumption are probably small in contrast to the kinds of savings that result from policies designed to promote conservation by legal or institutional change or through price incentives. This failure results in part from serious problems concerning productivity and cost escalation in service industries. And it results in part from the dependence of services on sectors using high levels of energy, the total requirements for energy by services, including those requirements they impose on their suppliers, limits the range of potential savings from service-sector growth. Numerical estimates and projections are developed from 1975 to 2000. ERA

ENERGY IMPACT ASSISTANCE: REPORT TO THE PRESIDENT

Mar 1978 139 p

(DOE/IR-0009) Avail NTIS HC A07/MF A01

Topics covered include: (1) the nature of the adverse socio-economic impacts from large new energy development projects now occurring and which are likely to occur in the future as domestic resources are developed; (2) the degree to which Federal, state, local, and private programs and efforts are meeting the current needs of communities impacted by energy development and the degree to which they are capable of meeting anticipated needs; and (3) set forth, for the President's decision, possible approaches that might be taken at the Federal level to provide additional assistance to communities that now experience, or may experience in the future, adverse impacts as a result of large new energy developments. The nature of energy development related growth is discussed along with the needs that energy-development-impacted communities are currently experiencing in five areas: public facilities and services, commercial facilities and professional services, housing, social and cultural needs, and transportation. COMMUNITY SYSTEMS PROGRAM: ITS GOALS AND ACCOMPLISHMENTS, 1978

Apr 1978 33 p

(Contract W-31-109-eng-38)

(ANL-78-XX-92) Avail NTIS HC A03/MF A01

The Community Systems Program is concerned with conserving energy and scarce fuels through new methods of satisfying the energy needs of American communities. These programs are designed to develop innovative ways of combining current, emerging and advanced technologies into Integrated Community Energy Systems (ICES) that could furnish any, or all, of the energy-using services of a community. The key goals of the Community System Program then, are to identify, evaluate, develop, demonstrate, and deploy energy systems and community designs that will optimally meet the needs of various communities. During 1977, contracts for the following Grid-Connected ICES (G-C ICES) demonstration teams were negotiated: City of Independence, Missouri; Clark University, City of Trenton, New Jersey; Health Education Authority of Louisiana (HEAL); and University of Minnesota. A coal-using ICES, proposed for Georgetown University, also has made noticeable strides toward demonstration of the concept. ERA

REGIONAL CONCEPTUAL DESIGN AND ANALYSIS STUDIES FOR RESIDENTIAL PHOTOVOLTAIC SYSTEMS Interim Report

P. F. Pittman, E. F. Federmann, R. W. Stoeltzing, W. J. McAllister, P. R. Rittelmann, and S. Nearhoof. Apr 1978. 147 p.
 (Contract EY-76-C-04-0789)
 (SAND-78-7014) Avail NTIS HC A07/MF A01

This preliminary report deals with the methodology of selecting superior on-site photovoltaic total energy residential systems that could apply to most regions of the United States. Selection of sites representing these regions, typical insolation and residential electrical and thermal loads for these sites, and the means of utilizing these data to select the superior systems for each region are reviewed. This entails acquisition of the best available insolation data for the sites selected and analysis of this data to determine a typical year for each site so that hour-by-hour computer analysis can be limited to one year for determination of the lifetime benefit of the system. A further requirement is the determination of electrical and thermal loads for each site so that the match of solar energy converted by the various solar energy systems to the residential load can be made and the solar displacement can be computed. Three levels of screening are used to systematically eliminate those systems which offer less potential than the eventual superior systems. ERA

REPORT TO THE PRESIDENT AND THE CONGRESS ON THE STATE ENERGY CONSERVATION PROGRAM Annual Report

Dec 1977. 130 p.
 (DOE/CS-0019/1) Avail NTIS HC A07/MF A01

The State Energy Conservation Program was established on December 22, 1975 by the Energy Policy and Conservation Act. The program provided a means by which a State may voluntarily enter into a cooperative effort with the Federal government to further that State's energy conservation efforts. Under the program, each State bore the responsibility for developing and implementing a comprehensive State energy conservation plan. The Federal government, in turn, provided both technical assistance and financial support. Eligibility was extended to all 50 States, the District of Columbia, Puerto Rico, Guam, American Samoa, the Virgin Islands, and the Trust Territory of the Pacific - a total of 56 jurisdictions. Fifty-five of the 56 jurisdictions were participating. The program goal was to reduce the energy consumption within each participating jurisdiction by 5 percent or more annually by 1980. ERA

ECONOMIC IMPACT OF RELAXING THE REGULATION ON SULFUR CONTENT OF FUEL OILS (R75-8) Final Report

Apr 1978 195 p refs. Sponsored by Illinois Inst for Environmental Quality
(PB-280974/7, IIEQ-77/30) Avail NTIS HC A09/MF A01
CSCL 05C

As a consequence of enacting the proposed regulation, ambient sulfur dioxide levels in Illinois would increase. No violations of the standards would be caused by enacting the proposed regulation. However, several existing violations were recorded in the state. No environmental benefits would result from the proposed regulation. Environmental costs investigated were health, ecological, and materials costs. Enacting the proposed regulation would not, of itself, result in a cost-savings benefit. Rather, fuel oil costs might then vary only as a function of natural market place forces. On the other hand, it seems certain that if the current regulations were maintained, the result would be increases in the cost of both fuel oil and the goods and services of fuel oil users. L S

An assessment of the potential environmental impact of automotive sulfonic acid (or sulfate) aerosol was made by analyzing the aerosol dynamics. This analysis lead to a prediction of ambient automotive sulfonic acid aerosol concentrations over and around a large, ten-lane highway with most cars having catalytic converters. The attachment rate of fine automotive sulfonic acid aerosols to ambient aerosols was examined. The dispersion and deposition of automotive sulfate was modelled over the highway for 'worst case' meteorology. The neutralizing effect of ambient ammonia on sulfonic acid concentrations around the highway was examined by a direct simulation procedure for dispersion calculations GRA

ESTIMATES OF THE NUMBER OF LARGE AMPLITUDE
GUSTS**

J V Ramsdell Mar 1978 55 p refs

(Contract EY-76-C-06-1830)

(PNL-2508) Avail NTIS HC A04/MF A01

Preliminary estimates for use in the design of wind energy conversion systems are presented. Existing turbulence information was combined with an assumed wind speed distribution to arrive at the estimates. The number of large amplitude gusts per year was treated as a function of the annual mean wind speed and terrain roughness. This treatment is based upon the assumptions that the atmosphere has neutral stability during high winds and that the gustiness is induced by flow over surface roughness elements. Large gusts during thunderstorms and other severe weather phenomena are not treated. The results of the study are presented in tabular form as a function of gust amplitude and hourly average wind speed ERA

Literature is reviewed (144 references) on the following subjects: physico-chemical properties, generation of fog oil smoke, human toxicity, occupational hazards and associated health and safety practices and standards, toxicological investigations in animals including mice, rats, guinea pigs, hamsters, monkeys, rabbits, dogs, cats and calves, absorption, distribution, metabolism and excretion in mammals, methods of sampling and determining atmospheric fog oil smoke, and extraction and determination of oils in biologic media. The two fog oils, SGF No 1 and SGF No 2, are both refined petroleum products. SGF No 1 is representative of fuels (similar to fuel oils No 1 and No 2 and light grades of diesel fuel), while SGF No 2 is a lubricating oil (related to light automotive and industrial lubricating oils and mineral oils). The two fog oils have different viscosities, distillation ranges, flash points, and different hydrocarbon compositions, among others. Both oils are used in smoke generators, which vaporize the oils and force the vapors into the atmosphere, where they condense into a dense white smoke screen consisting of oil microdroplets. Effects of continuous exposure of US Army personnel to fog oil smoke screens, for weeks on end, have not been documented GRA

INSULATING WALL BOUNDARY LAYER IN A FARADAY
MHD GENERATOR Ph.D Thesis**

Roy R Rankin 1978 129 p

Avail Univ Microfilms Order No 7814201

The velocity profile at the center of the insulating wall in an MHD generator was measured using a dual beam real time anemometer system with an argon ion laser. The analytic model involved the computer solution, using finite difference techniques of the momentum, energy, and electrical equations including MHD effects for the turbulent insulating wall boundary layer. The turbulence model used was the mixing length theory which was modified to include turbulence damping. Variable, equilibrium properties were employed producing a coupling between the momentum, energy, and electrical equations resulting in extended Hartmann flow. Calculations for a supersonic generator indicate that turbulence damping is unimportant, but that extended Hartmann flow causes a reduction in both the skin friction and the heat transfer and could lead to separation of the insulating wall boundary layer Dissert Abst

THE USE OF DISSOCIATING GASES AS THE WORKING FLUID IN THERMODYNAMIC POWER CONVERSION CYCLES Ph.D. Thesis

Krishnamurthy Kesavan 1978 274 p
 Avail Univ Microfilms Order No 7814383

Increasing need for more effective utilization of all available energy sources and for reduction in the capital costs of electrical power generation points to the need for developing systems with higher thermodynamic efficiencies and smaller simpler components. The potential of steam, which is the dominant working fluid in fossil and nuclear power conversion cycles, were fully exploited. The potential of chemically dissociating substances working fluids in achieving smaller and simpler plants with improved cycle performance is explored. Results indicate that the dissociating gases can provide attractive alternatives to conventional steam and inert gases in terms of reduced electric generation costs through improved cycle efficiencies, smaller components and simpler plant arrangements.

METHANATION CATALYSTS ACTIVITY, ADSORPTION AND DEGRADATION STUDIES OF NICKEL AND NICKEL BIMETALLIC CATALYSTS FOR METHANATION Ph.D. Thesis

Richard Byron Pannell 1978 189 p
 Avail Univ Microfilms Order No 7813813

Adsorption of hydrogen, carbon monoxide, oxygen and hydrogen sulfide catalytic activity for methanation and thermal degradation of nickel and nickel bimetallic catalysts were investigated. The adsorption of hydrogen on nickel powder was shown to be H/Ni = 1. This ratio was also shown to be one on supported nickel catalysts from hydrogen chemisorption. X-ray line broadening and electron microscopy CO adsorption was shown to depend upon pressure, temperature, composition and support. Oxygen adsorption is multilayer in nature and tempera-

ture dependent. Hydrogen sulfide adsorbs dissociatively and fully saturates nickel surfaces above 5 ppm in hydrogen. Activity tests show nickel and cobalt to be very active methanation catalysts. Metal loading and composition alter catalyst activity and product distribution, especially higher hydrocarbons. Adsorbed sulfur also alters activity and product distribution.

HOT CORROSION/EROSION TESTING OF MATERIALS FOR APPLICATIONS FOR ADVANCED POWER CONVERSION SYSTEMS USING COAL-DERIVED FUELS. TASK 2 EVALUATION OF TURBINE MATERIALS FOR USE IN A COAL-FIRED FLUIDIZED BED COMBUSTION ENVIRONMENT Progress Report, Feb. 1978

R L McCarron Mar 1978 21 p
 (Contract EX-76-C-01-2326)
 (FE-2326-20, PR-20) Avail NTIS HC A02/MF A01

Activities are reported in a program to provide 1000-hour engineering data on the corrosion/erosion deterioration of gas turbine materials U 700 and IN-738 exposed to the exhaust gas from a pressurized fluidized bed combustor. The results show that on the leading edges of the specimens there was deposition, corrosion, and erosion all occurring in the same area. It is reasonable to expect that corrosion and erosion might occur simultaneously. The occurrence of erosion and deposition in the same area is unlikely except if there was a significant change in the gas velocity during the test. This was the case for the 100 hour shakedown test since the mass flow through the turbine test section decreased significantly after the first 50 hours due to plugging of the inlet orifice of the turbine test section upstream of the cascades.

CATALYTIC CONVERSION OF SOLVENT REFINED COAL TO LIQUID PRODUCTS M.S. Thesis

Kylan F Tanner and Alexis T Bell Feb 1978 98 p refs

(Contract W-7405-eng-48)

(LBL-6807) Avail NTIS HC A02/MF A01

Catalytic reactions of solvent refined coal (SRC) were studied using mixed metal oxide and low melting Lewis acid catalysts in extracting solvent media. From characterization of the benzene- and cyclohexane-soluble products $ZnCl_2$ and $SnCl_2$ were determined to be the most effective at hydrogenating and solubilizing SRC while assisting in heteroatom removal. $ZnCl_2$ and $SnCl_2$ were also found to be more effective at producing oil-like products rather than asphaltene-like products. Further enhancement of the solubilization of SRC could be achieved by the addition of isopropanol to the Lewis acid-substrate-solvent reaction mixture. Dry HCl was also investigated for its effect on the solubilization of SRC. The solubilized products and residues were characterized and the effect of reaction temperature, hydrogen pressure, and catalyst loading on the yield of soluble products were studied. ERA

FUELS FROM SUGAR CROPS Quarterly Report

E S Lipinsky, S Kresovich, T A McClure, and W T Lawhon
 31 Jan 1978 89 p refs

(Contract W-7405-eng-92-077)

(TID-28191, QR-3) Avail NTIS HC A05/MF A01

Substantial progress was made on both the agricultural and the processing aspects of these fuels from biomass research program. Harvesting operations were performed at all locations for both sugarcane and sweet sorghum. Although final yield data were not statistically analyzed, it is apparent that large gains in total biomass were achieved through the introduction of narrow row spacing. An agronomic demonstration of sweet sorghum production in the Midwest was carried out. The information collected indicated sweet sorghum showed considerable potential in the Midwest, provided that short season processing problems can be overcome. Total biomass yields reached values of 25.6 metric tons per hectare on a dry weight basis. Under nonirrigated conditions, it appeared that sweet sorghum was energy self-sufficient. Laboratory work on bagasse drying rates was initiated. ERA

PERFORMANCE OF GASOLINE AND DIESEL FUELS PRODUCED FROM COED SYNCRUDE

R L Bechtold and R D Fleming Jun 1978 26 p refs

(BERC/RI-78/2) Avail NTIS HC A03/MF A01

Fuel consumption and exhaust emissions characteristics were evaluated for gasoline and diesel fuel produced from coal liquid derived syncrude. The engine types used were (1) current technology spark-ignition homogeneous charge, (2) stratified-charge, and (3) Stirling. There were no significant changes in fuel consumption or exhaust emissions between syncrude-derived fuels and conventional fuels in stratified-charge and Stirling engines. Because of its low (approximately equal to 70) synthetic gasoline required a reduction in compression ratio to achieve knock-limited, MBT spark timing. This was in comparison to the reference gasoline, in a single cylinder, spark ignited, test engine, at one speed/load point. Exhaust emissions were very similar between the two fuels. ERA

A survey of tropical Atlantic marine photosynthetic organisms was conducted in order to find an organism exhibiting exceptionally high hydrogen producing capabilities. Such an organism was found in the form of a blue-green algal strain, Miami BG7. As part of an in-depth investigation of hydrogen production in this species, the mechanisms of this process and hydrogen photoproduction were studied. The use of various metabolic inhibitors to investigate the biochemical pathways of hydrogen production was investigated. Results indicate that the process is strongly photodependent. GRA

Supercooling of silicon-tin alloy melts was studied. Values as high as 78 C at 1100 C and 39 C at 1200 C were observed, corresponding to supersaturation parameter values 0.025 and

0053 at 1050 C and 1150 C, respectively. The interaction of tin with silane gas streams was investigated over the temperature range 1000 to 1200 C. Single-pass conversion efficiencies exceeding 30% were obtained. The growth habit of spontaneously-nucleated surface growth was determined to be consistent with dendritic and web growth from singly-twinned triangular nuclei. Surface growth of interlocking silicon crystals, thin enough to follow the surface of the liquid and with growth velocity as high as 5 mm/min, was obtained. Large area single-crystal growth along the melt surface was not achieved. Small single-crystal surface growth was obtained which did not propagate beyond a few millimeters. LS

(AD-A057280 FAA-NA-77-20 FAA-RD-78-75) Avail NTIS HC A05/MF A01 CSCL 17/9

Tests were undertaken to investigate the relationship between pulsed-type interference and the air traffic controller working in the terminal area. This was done by recording a series of pulsed-type interference cases and combining them with simulated analog radar targets to form a set of scenarios for display to a group of Federal Aviation Administration (FAA) controllers. Several operational responses were used as performance measures to investigate interference criteria. The interference cases were then quantified and ordered based on two indexing schemes. Tests based on the indices and the performance measures revealed that correlations exist between the operational responses and the interference cases. Author

HIGH-TEMPERATURE LINEAR RADIATION-CAVITY SOLAR COLLECTOR WITH A FRESNEL CONCENTRATOR
Ph.D. Thesis

Zenen Igor Antoniak 1978 234 p
Avail Univ Microfilms Order No 7812029

A model solar-thermal concentrator-collector that is 1/6th scale relative to a system considered to be of practical dimensions for power generation was constructed and tested. It consists of a mirror-concentrator, a receiver pipe, a graphite absorber, and a gaseous heat transfer medium. The mirror-concentrator utilizes 40 suitably tilted reflective strips mounted in a parallel planar array which moves east-west. The effect of various parameters such as insulation thickness, aperture width, and antireflective coatings were investigated in an optimization study of the proposed full-scale collector. Aperture width, aperture emittance, and mirror reflectance exert the strongest influence on exit temperature and collector efficiency. Dissert Abstr

SIGNIFICANCE OF PROCESS VARIABLES ON LIQUID EFFLUENT PRODUCTION IN COAL GASIFICATION
Ph.D. Thesis

David Vincent Nakles 1978 312 p
Avail Univ Microfilms Order No 7814230

The production of liquid effluents condensable hydrocarbons and water soluble contaminants, was investigated. Significant variations in tar, phenol, chemical oxygen demand, and total organic carbon production occur during transient operating periods, i.e., start-up or shutdown and between steady state operations at different gasifier operating conditions. In particular, changes in conditions which enhance the approach of effluent species to chemical equilibrium dramatically influence steady state liquid effluent production. Increasing gas-solid contacting, the final reaction temperature and residence time of the devolatilized species in the hot zone of the reactor reduce organic liquid effluent production significantly. Near complete extinction of these compounds is possible by providing the appropriate combination of coal devolatilization conditions and product gas residence time. Dissert Abstr

A hydrogen-oxygen fueled internal combustion engine is described which utilizes an inert gas such as argon as a working fluid to increase the efficiency of the engine, eliminate pollution, and facilitate operation of a closed cycle energy system. In a system where sunlight or other intermittent energy source is available to separate hydrogen and oxygen from water, the oxygen and inert gas are taken into a diesel engine into which hydrogen is injected and ignited. The exhaust is cooled so that it contains

only water and the inert gas. The inert gas in the exhaust is returned to the engine for use with fresh oxygen while the water in the exhaust is returned to the intermittent energy source for reconversion to hydrogen and oxygen.

TERRESTRIAL CENTRAL STATION ARRAY LIFE-CYCLE ANALYSIS SUPPORT STUDY Final Report

Aug 1978 211 p refs Sponsored by NASA Prepared for JPL

(Contract JPL-954848)

(NASA-CR-157772, DOE/JPL-954848-78/1) Avail NTIS HC A10/MF A01 CSCL 10B

Plant elements evaluated included designs for module, panel and array structures, as well as balance-of-plant systems. Installation and maintenance procedures and the impact of site environment were also evaluated. In terms of the cost of energy produced, the horizontal array configuration was found to be less expensive than the tandem array at latitudes less than 40 deg. Both of these configurations are less expensive than the rack design. However, the costs of energy for all three configurations are within approximately ± 10 percent of each other. For flat plate panels, the seasonally adjusted and tracking array configurations are not economically attractive when compared to the three other designs. Balance-of-plant costs are approximately equal to (goal) module costs. The array structures and foundations are the most expensive items in the balance-of-plant costs. L S

HC A10/MF A01 CSCL 10C

In the manufacture of cement, literally trillions of Btu's are rejected to the environment each year. The purpose of this feasibility study program was to determine whether thermal energy storage could be used to conserve or allow alternative uses of this rejected energy. This study identifies and quantifies the sources

of rejected energy in the cement manufacturing process, established use of this energy, investigates various storage system concepts and selects energy conservation systems for further study. Thermal performance and economic analyses are performed on candidate storage systems for four typical cement plants representing various methods of manufacturing cement. Through the use of thermal energy storage in conjunction with waste heat electric power generation units an estimated 2.4 x 10 to the 13th power Btu/year, or an equivalent on investment of the proposed systems are an incentive for further development. USAF TERRESTRIAL ENERGY STUDY VOLUME 3, PART 2 ENERGY CONSERVATION SYSTEMS HANDBOOK Final Report, 1 Apr 1976 - 1 Feb. 1978

A Carlson, D Fuller, R Reyer, C Mallner, and S Fogelson May 1978 483 p refs (Contract F33615-76-C-2171) (AD-A057252, AFAPL-TR-78-19-Vol-3-Pt-2) Avail NTIS HC A21/MF A01 CSCL 10/2

This report was prepared by Burns and Roe, Inc. to serve as a guide for the U S Air Force in selecting types of energy conversion systems to meet their future ground power requirements. The electric power requirements included in this report range from 10 kilowatts to 50 megawatts. Twenty-one types of systems, conventional as well as advanced, are considered. These include 19 types of energy conversion systems which utilize either chemical fuel, nuclear fuel, solar energy or wind energy and two types of energy storage systems which utilize electric power for recharging. Each system is characterized in terms of a set of economic, physical and performance parameters including acquisition costs, life cycle costs, size, efficiency and environmental constraints. A total of eighteen such parameters are presented for each type of system for several sets of requirements. The requirements are defined in terms of electric power level, frequency and duration of operation corresponding to typical U S Air Force ground applications. Author (GRA)

COMPRESSED AIR ENERGY STORAGE ADVANCED SYSTEMS ANALYSIS Progress Report, FY 1977

D K Kreid and M A McKinnon Mar 1978 133 p refs (Contract EY-76-C-06-1830) (PNL-2464) Avail NTIS HC A07/MF A01

Technologies that will reduce the consumption of natural gas and oil are reviewed. Major areas of interest for the compressed air energy storage (CAES) program are cost assessment for thermal energy storage (TES) systems that are suitable for CAES applications, potential fuel savings of hybrid CAES cycles that incorporate TES for recovery of the heat of compression and estimate the economic incentive for using TES in CAES systems and modified CAES cycles that eliminate the use of gas and oil by the use of alternative fuels. ECONOMIC FEASIBILITY OF STRONTIUM-90 FUELED HEATERS FOR USE IN COLD REGIONS

W E Sande and R L Aaberg Feb 1978 54 p refs (Contract EY-76-C-06-1830) (PNL-2476) Avail NTIS HC A04/MF A01

Cost estimates for various radioisotope fueled heating systems are given. The economic feasibility of radioisotope fueled heaters was determined by comparing them to fuel oil systems. The basic conceptual heat design considered were a heat source and radiation shielding with no external heat transfer equipment. Radioisotope heaters were much more expensive than fuel oil systems. The radioisotope fuel costs contribute 50 percent or more to the overall cost. An effective method to make a substantial reduction in radioisotope system cost would be to lower the Sr price from 10 cents/curie. Radioisotope heaters will not be economically competitive with fuel oil systems unless the price of strontium-90 is reduced below 10 cents/curie, fuel oil prices increase significantly or for a particular application the reliability or adaptability of a fuel oil system is unacceptable and a radioisotope system is satisfactory. VOLUNTARY BUSINESS ENERGY CONSERVATION PROGRAM Progress Report

Apr 1978 161 p (DOE/CS-0018/6, PR-6) Avail NTIS HC A08/MF A01

Data are compiled from 48 industry and trade associations representing 3,000 firms. Progress in energy conservation in the Voluntary Business Energy Conservation Program is reported. In the first six months of 1977 the Program's index of business energy efficiency was running at an estimated 9.2 percent above the 1972 base level. This increase is mostly attributable to sizable gains for the chemicals and petroleum industries, although energy use improvements were generally widespread. However, moderate declines were recorded in the indexes for primary metals, foods, and textile industries. ERA

LIMITS TO ENERGY CONSERVATION IN CHEMICAL PROCESSES

W Gool Apr 1978 30 p refs

(Contract EY-76-C-05-00333)

(ORAU/IEA-78-6(M)) Avail NTIS HC A03/MF A01

A national policy for energy conservation is handicapped by two shortcomings. First the objectives of energy conservation are poorly defined in many national policies. Second no accepted yardstick is available by which to determine the priorities for different conservation projects. A general approach to establish a common conservation measure is described in this paper. Use of the thermodynamic limit to evaluate the conservation potential is shown to be inappropriate. For each production rate a real energy minimum exists, and it does not correspond to the thermodynamic limit. A simplified model is applied to an average kind of energy-intensive chemical production. The characteristics of the cost minimum and the energy minimum are used to derive a value in dollars per megajoule of energy saved and the importance of this value for ranking priorities in a national energy policy is explained. POTENTIAL FOR COGENERATION DEVELOPMENT IN SIX MAJOR INDUSTRIES BY 1985

Dec 1977 217 p refs Sponsored by DoE

(HCP/M60172-01/2) Avail NTIS HC A10/MF A01

Industrial cogeneration development potential both without and with government action was estimated for six industries that consume a significant amount of electricity and process heat: chemicals, petroleum refining, pulp and paper, steel food processing, and textiles. Process-steam topping applications were studied because the initial analysis of industrial cogeneration potential indicated that 60 to 70 percent of the potential development is in these applications. The 1985 thermal energy requirements for process use in industry were projected at 17,900 trillion Btu--13,900 trillion Btu for process steam and 4,000 trillion Btu for direct process heat. The 1985 waste heat bottoming cogeneration potential in the six focus industries was estimated to be 3,540 trillion Btu predominantly (2,760 trillion Btu) in the chemical, steel and refining industries. A maximum technical potential for cogeneration of 380 to 740 billion kWh of electric energy produced was used to estimate an energy savings of 1.0 to 1.6 million bbl/day oil equivalent. ERA

THERMAL CONVERSION OF OIL-SHALE KERGEN USING CO AND WATER AT ELEVATED PRESSURES

J J Cummings and W E Robinson 1978 21 p refs

(LERC-78/1) Avail NTIS HC A02/MF A01

Temperature, heating time, pressure, presence or absence of mineral carbonates, shale particle size, shale grade, presence of organic solvents and amount of water were investigated as variables affecting kerogen conversion. Higher conversions of kerogen at low temperatures were obtained by using the CO-H₂O reaction and CO-H₂O-solvent reaction than by dry thermal processes. The soluble degradation products from the kerogen have elemental compositions similar to shale oils and would be suitable materials for hydrocracking and refining feedstocks. Other advantages are good conversion of extremely rich oil shales and good conversion of finely ground oil shale. Water-soluble minerals are removed from the shale residue during the reaction and are recovered as a valuable byproduct with significant environmental advantage. ERA

ENVIRONMENTAL DEVELOPMENT PLAN FOR THE DIVISION OF TRANSPORTATION ENERGY CONSERVATION, 1977

D Maxfield and D Moses Mar 1978 172 p refs

(DOE/EDP-0018) Avail NTIS HC A08/MF A01

The ecosystem, resource, physical environment, health safety and socio-economic issues associated with the research, development, demonstration and assessment of thirteen transportation technologies are identified. These include the Stirling and gas turbine engines, constant speed accessory drive system, bottoming cycle for heavy duty trucks, continuously variable transmission, new hydrocarbons (brood-cut petroleum fuels), alcohol and synthetic fuels, hydrogen electric and hybrid vehicles, pipeline bottoming cycle, and stratified-charge concept. A research and assessment strategy for resolving any potentially adverse environmental issues stemming from these technologies is presented. The process provides a framework for incorporating environmental consideration into agency planning processes at the earliest stages, resolving environmental issues concurrently with energy technology development and assuring that adverse environmental effects are mitigated through sound technological design and are at the same level of importance as technological, fiscal, and institutional issues in decision-making. **SIMPLE ECONOMIC MODEL FOR ENERGY RESEARCH AND
 SUPPLY STRATEGIES, DRAFT**
 G H Canavan and V H Reis Apr 1978 76 p refs
 (DOE/ER-0005/D) Avail NTIS HC A05/MF A01

A simple transparent model of energy economics. The model can be used to determine energy prices and flows under a reasonable range of resource and policy constraints. The model is based on familiar concepts of the equilibration of demand and supply to determine prices and flows. Demand structures are based on more sophisticated models. Supply structures are a combination of a simple physical model for the motion of supply curves of depletable resources, exogenous prescription of supplies from those sources for which environmental or social pressure subordinate economics to policy, and highly aggregated models for the penetration of new alternative energy systems as a function of their price, date of availability, and maximum growth rate. The model is calibrated by comparison with a more fundamental model which operates at roughly the same level of source aggregation. ERA

**STUDY OF HEAT ENGINE/FLYWHEEL. HYBRID PROPULSION
 CONFIGURATION WITH ELECTRICAL TRANSMISSION
 SYSTEM, PHASE 1 Final Report**
 Apr 1978 151 p refs
 (Contract EY-76-C-04-0789)
 (ALO-41/1) Avail NTIS HC A08/MF A01

Mechanical and electronic options for the system were evaluated in a five passenger family sedan and were ranked according to cost, weight, and fuel economy. The primary use of this transmission system is to augment the heat engine with energy from the flywheel in such a manner as to level engine loads and improve the overall vehicle efficiency. The benefits of using this system are as follows: (1) provides fuel economy, which is unobtainable with conventional propulsion arrangements, (2) acceleration and passing performance same as provided by large V-8 engine, (3) meets 1985 Federal emission standards, (4) reduces direct operating cost for the consumer, and (5) reduces heat engine size. The hybrid's fuel consumption is 39.5 mpg, compared to 15 mpg projected for a conventional vehicle. This represents a 263% improvement in fuel economy. The hybrid also provides a 40% savings in direct operating cost. ERA

**DEMONSTRATION PROJECT AS A PROCEDURE FOR
 ACCELERATING THE APPLICATION OF NEW TECHNOLOGY.
 CHARLIE TASK FORCE REPORT, VOLUME 1**
 Feb 1978 48 p 2 Vol
 (Contract EX-76-C-01-2295-006)
 (DOE/RA-0003/1-Vol-1) Avail NTIS HC A03/MF A01

Following the establishment on January 19, 1975, of the Energy Research and Development Administration, the Task Force on Demonstration Projects was organized to assist the new agency in evaluating its planning and management of its projects. The agency was to support research and development in energy-related areas, to be applied to the civil sector. The agency was also authorized to support the commercialization of new energy technology. The Task Force concluded it could not adequately provide guidance or demonstrations without examining ERDA's general commercialization role as defined in the statute. The Task Force decided to concentrate on these general aspects of the subject. The Task Force's general conclusions and recommendations on ERDA's overall commercialization role are given along with its specific consideration of the demonstration project and the demonstration project guidelines. ERA

SOLAR TOTAL ENERGY SYSTEM: LARGE SCALE EXPERIMENT PHASE 2: CONCEPTUAL DESIGN Final Technical Progress Report

C D Hartman. Sep 1977. 275 p.
 (Contract EG-77-C-04-3986, Proj 7354)
 (SE-3986-1) Avail NTIS HC A12/MF A01

A conceptual design of a solar total energy system for a knitwear factory in Shennandoah, Georgia was completed. A key design objective was to maximize the cost effectiveness of collected solar energy while using it to supply at least 60 percent of the total annual energy requirements of the plant. The design features a distributed solar energy receiver system with sun-tracking parabolic trough collectors oriented north-south, two toluene Rankine cycle turbogenerators, absorption cycle and vapor compression cycle water chillers, and high temperature oil/rock bed storage reservoirs. One turbogenerator at a minimum meets the solar energy system's own demand for electricity with heat rejected for this turbine used to generate steam for the factory. When additional solar energy is available, the additional electricity and heat from this turbine drives the vapor compression and absorption chillers to produce cold water for the plant's air-conditioning system. The second turbogenerator is designed to convert solar energy to electricity for the plant at maximum efficiency. ERA

RESIDENTIAL SPACE HEATING COST. GEOTHERMAL VS CONVENTIONAL SYSTEMS

I A Engen. Feb 1978. 49 p. refs.
 (Contract EY-76-C-07-1570)
 (TREE-1182) Avail NTIS HC A03/MF A01

Operating characteristics and economics of several representative space heating systems are analyzed. Analyses are based on the use of geothermal water at temperatures as low as 120 F in forced air systems and 140 F in baseboard convection and radiant floor panel systems. The baseboard convection system is the most economical type of geothermal space heating system when geothermal water of at least 140 F is available. Heat pumps utilizing water near 70 F, with negligible water costs, are economically feasible and they are particularly attractive when space cooling is included in system designs. Procurement and installation costs for similar geothermal and conventional space heating systems are about equal, so geothermal space heating

is cost competitive when the unit cost of geothermal energy is less than or equal to the unit cost of conventional energy. Guides are provided for estimating the unit cost of geothermal energy for cases where a geothermal resource is known to exist. ERA

COMMERCIAL DEMAND FOR ENERGY: A DISAGGREGATED APPROACH

Jerry R Jackson, Steve Cohn, Jane Cope, and William S Johnson. Apr 1978. 69 p. refs.
 (Contract W-7405-eng-26)
 (ORNL/CON-15) Avail NTIS HC A04/MF A01

The structure and forecasting accuracy of a disaggregated model of commercial energy use recently developed is described. The model forecasts annual commercial energy use by ten building types, five end uses, and four fuel types. Both economic (utilization rate, fuel choice, capital-energy substitution) and technological factors (equipment efficiency, thermal characteristics of buildings) are explicitly represented in the model. Model parameters were derived from engineering and econometric analysis. The model was then validated by simulating commercial energy use over the 1970-1975 time period. The model performs well both with respect to size of forecast error and ability to predict turning points. The model was then used to evaluate the energy-use implications of national commercial buildings standards based on the ASHRAE 90-75 recommendations. ERA

INVESTIGATION OF ALTERNATE TYPES OF WATER-STORAGE COMPONENTS TO BE UTILIZED IN CONJUNCTION WITH THE ACES SYSTEM
Dec 1977 78 p refs
(Contract W-7405-eng-26,
(ORNL/Sub-78/14233/1) Avail NTIS HC A05/MF A01

Major areas investigated were cost of the tank, and integration with the construction project Nationwide tank building capability, and average costs are given Costs of free-standing tanks were found to average \$2 00/cu ft for a 500 cu ft tank and \$1 37/cu ft for a 3000 cu ft tank. The least-costly tanks were those which are field constructed and fully integrated with the project design Traditional materials and procedures (masonry and concrete) offer the greatest flexibility and lowest cost Such integration can create cost savings of approximately 50% since load bearing walls can fulfill additional structural (foundation) requirements The least costly method of tank construction available was foam-form block, a proprietary system using reshaped polystyrene open cell blocks between which are placed reinforcing steel and concrete ERA

Cu/SUB x/S-(Cd, Zn)S PHOTOVOLTAIC SOLAR ENERGY CONVERTERS Quarterly Report, Jul. - Sep. 1977

T M Peterson, B L Chin, K Seshan, and J Washburn Nov 1977 26 p refs

(Contract W-7405-eng-48)

(HCP/T7405-1 QR-2) Avail NTIS HC A03/MF A01

Reproducible growth of uncracked, thick films of (Cd,Zn)S was accomplished on the As(antis 111) face of GaAs substrates and on substrates tilted approximately 14 deg off of (antis 111). Modifications to the hot wall deposition apparatus were made to eliminate the trace impurities found at the perimeter of the films. Techniques for transmission electron microscope specimen preparation were developed. Results yielded evidence supporting Ga-face film cracking by an interfacial layer of GaS. The spectral response portion of the device measurement apparatus is operational. The elastic tunneling calculations agree with experimental results for I-V characteristics of illuminated cells. ERA

AMORPHOUS SEMICONDUCTORS IN PHOTOVOLTAIC AND SOLAR THERMAL CONVERSION

Richard W Griffith 1978 6 p refs Presented at Intern Solar Energy Congr., New Delhi, 16 Jan 1978

(Contract EY-76-C-02-0016)

(BNL-24216, Conf-780114-7) Avail NTIS HC A02/MF A01

Amorphous semiconductor materials promise to play an important role in solar energy conversion. For photovoltaic applications, acceptable efficiencies η in large-area Schottky cells may be possible if hole transport in a-Si can be improved. Indeed, in very small-area cells (approx 1 sq mm) reasonable upper limits η approximately 6% were reported in the literature. For solar thermal applications, studies on Si/sub 1-x/B sub x/ alloys point toward the realization of solar coatings that are stable at high temperatures and that satisfy the dual requirement of high solar absorptance α /sub s/ and low infrared emittance ϵ . DESIGN OF CPC PHOTOVOLTAIC SOLAR COLLECTORS

R M Graven, A J Gorski, and W R McIntire 1978 6 p refs Presented at Intern Solar Energy Congr., New Delhi, 16 Jan 1978

(Contract W-31-109-eng-38)

(CONF-780114-8) Avail NTIS HC A02/MF A01

Two new photovoltaic solar collectors were designed, built and tested. A substantial improvement in performance was achieved in that they produce more electrical power and use significantly less photovoltaic material per unit area than the present state-of-the-art flat panel arrays. A reflective style Compound Parabolic Concentrator (CPC) optical system was used for one collector, and a dielectric style (DCPC) optical system was used for the other collector to concentrate sunlight onto custom designed photovoltaic solar cells. For these two panels only periodic angular adjustments are required which eliminates the need for two-axis tracking. A modular design of individual sub-units containing an array of series and parallel circuits allows a user to select a variety of operating conditions. ERA

SOLAR-THERMOCHEMICAL PRODUCTION OF HYDROGEN FROM WATER

K E Cox and M G Bowman 1978 16 p refs Presented at Solar Thermal Test Facilities Users Assoc. Meeting, Golden, Colo., 11 Apr 1978

(Contract W-7405-eng-36)

(LA-UR-78-1052, Conf-780447-2)

Avail NTIS HC A02/MF A01

Large scale hydrogen production using solar energy for the decomposition of water by thermochemical cycles electrolysis, or a hybrid combination of these methods is reviewed. The potential higher efficiency and lower cost for thermochemical methods, versus the overall electrolysis was recognized. The criteria for the selection of an appropriate thermochemical cycle for matching with a high temperature solar heat source are detailed. Advantages of a thermochemical cycle based on a solid sulfate decomposition that makes use of isothermal high temperature energy is detailed, and a plan for the implementation of such a cycle on a central tower solar receiver is given. SOLAR-THERMAL CONVERSION TO ELECTRICITY UTILIZING A CENTRAL RECEIVER, OPEN-CYCLE GAS TURBINE DESIGN Final Report

J C Grosskreutz Mar 1978 226 p refs Sponsored by EPRI (EPRI-ER-652) Avail NTIS HC A11/MF A01

A program to develop a solar/electric power plant which utilizes an open cycle gas turbine as the prime mover is discussed. A conceptual design for a commercial-scale plant, with a nominal rating of 60 MWe, was prepared. The characteristics of the design, which employs an elevated central receiver surrounded by a field of heliostats, are presented. Energy storage, both buffer and long-term is provided by fossil fuels. The fuel, either oil or gas, is burned in combustors which are in a parallel arrangement with the solar receivers. The turbine inlet gas temperature is 982 to 1066 C. Because these temperatures preclude the use of any available metal for the heat transfer surface, ceramics are employed. Experiments verified the suitability of silicon carbide for an application of this type and also verified the analytic methodology which had been used in the receiver design activities. Preliminary estimates of the physical and operating characteristics of a bench model solar receiver employing silicon carbide tubes, were developed. ERA

DEVELOPMENT OF HIGH-EFFICIENCY COST-EFFECTIVE, ZINC-CHLORINE BATTERIES FOR UTILITY PEAK-SHAVING, 1976 Interim Report

Philip C Symons Mar 1978 277 p

(EPRI-EM-711) Avail NTIS HC A13/MF A01

Principle thrusts of this program were battery scaleup by a factor of twenty from earlier work and investigation of the economics of zinc-chlorine peak-shaving batteries located at utility substations. Development programs on cell performance, electrode research, and materials of construction were conducted in support of these objectives. A battery was designed, built, and tested which delivered 18 kWh dc at an electrochemical energy efficiency of 60%. Two smaller systems were built and tested in order to permit informed selection of the chlorine electrode material. Porous graphite was chosen. The cycle-testing of two battery systems are successfully automated. Two conceptual designs were prepared. A detailed cost breakdown was provided for each design. ERA

FEDERAL WIND ENERGY PROGRAM. PROGRAM SUMMARY

Jan 1978 78 p

(DOE/ET-0023/1) Avail NTIS HC A05/MF A01

The objective of the Federal Wind Energy Program is to accelerate the development of reliable and economically viable wind energy systems and enable the earliest possible commercialization of wind power. To achieve this objective for small and large wind systems requires advancing the technology, developing a sound industrial technology base, and addressing the non-technological issues which could deter the use of wind energy. This summary report outlines the projects being supported by the program through FY 1977 toward the achievement of these goals. It also outlines the program's general organization and specific program elements. ERA

SURVEY OF ENVIRONMENTAL REGULATIONS APPLYING TO GEOTHERMAL EXPLORATION, DEVELOPMENT, AND USE Final Report

Gene V Beeland Feb 1978 257 p refs (Contract EPA-68-03-2371)

(PB-281023/2, EPA 600/7-78-014) Avail NTIS HC A12/MF A01 CSCL 10A

Federal, State, and local environmental laws and regulations that apply to geothermal energy development are summarized. Most attention is given to those regulations which deal with air pollution, water pollution, solid wastes, and impact assessments. Analyses are made of the regulations with respect to resource definition, pollutants currently not controlled, duplicity and overlap in permit and impact assessment requirements, the lack of uniformity of regulations between states, and the probable future approaches to the regulatory problems. RAIN SCAVENGING STUDIES Progress Report

A Nelson Dingle Jul 1977 83 p refs

(Contract AT(1171)-1407)

(COO-1407-65 Rept-068670-15-P, PR-13) Avail NTIS HC A05/MF A01

The emission, transport, and deposition of key contaminants from coal burning were studied. A numerical mesoscale dynamic model capable of simulating atmospheric motions and precipitation patterns in the Lake Michigan Basin region was developed. A numerical model of cloud microphysics and rain generation in the presence of reactive substances was also derived. A quantitative evaluation of the chemical transformations, the transport and the removal of atmospheric contaminants is presented. S B S

LOCAL MEASUREMENTS IN TWO-PHASE LIQUID-METAL MHD

G Fabris, P F Dunn, and E S Pierson 1978 9 p refs
Presented at 2d Seminar on MHD Flows and Turbulence, Beer-Sheva, Israel, 28 Mar 1978
(Contract W-31-109-eng-38)
(CONF-780336-2) Avail NTIS HC A02/MF A01

Since the inception of the development of a two-phase liquid-metal magnetohydrodynamic (LMMHD) power generation system at Argonne National Laboratory, increasing emphasis is placed on the relation between the characteristics of local two-phase flow structure and LMMHD generator efficiency. A local-measurements program was undertaken to characterize the local flow structure occurring inside two-phase LMMHD mixers and generators. Continuing local-measurement experiments are in progress at ANL using (single and multiple resistivity probes and (single) hot-film probes to determine local void fractions, velocities and turbulence intensities. The techniques which were tested and proved successful in air-water mixtures are now being extended to NaK-nitrogen mixtures, in which some initial tests were made ERA

ESCOE INFORMATION RETRIEVAL SYSTEM. SYSTEM DESCRIPTION AND OPERATION

W J Costley Apr 1978 41 p refs
(Contract EF-77-C-01-2468)

(FE-2468-26) Avail NTIS HC A03/MF A01

The Engineering Societies Commission Energy (ESCOE) Technical Information Retrieval System is described. The technical information needs of the ESCOE resident engineers in providing services to DOE were identified, and the information resources that best match those needs were examined. The assessment of information needs resulted in the selection of an ESCOE information base. The best mix of information sources and services was selected, and a remote terminal was acquired to access those sources that are available as computerized data bases ERA

EVALUATION OF FIDC SYSTEM Final Report

Robert A Hall, Mack W Dowdy, and Theodore W Price 15 Oct 1978 132 p Prepared for DOE

(Contract NAS7-100)

(NASA-CR-157763, JPL-Pub-78-93) Avail NTIS
HC A07/MF A01 CSCL 21A

A fuel vapor injector/igniter system was evaluated for its effect on automobile engine performance, fuel economy, and exhaust emissions. Improved fuel economy and emissions, found during the single cylinder tests were not realized with a multicylinder engine. Multicylinder engine tests were conducted to compare the system with both a stock and modified stock configuration. A comparison of cylinder-to-cylinder equivalence ratio distribution was also obtained from the multicylinder engine tests. The multicylinder engine was installed in a vehicle was tested on a chassis dynamometer to compare the system with stock and modified stock configurations. The fuel vapor injector/igniter system (FIDC) configuration demonstrated approximately five percent improved fuel economy over the stock configuration, but the modified stock configuration demonstrated approximately twelve percent improved fuel economy. The hydrocarbon emissions were approximately two-hundred-thirty percent higher with the FIDC system than with the stock configuration. Both the FIDC system and the modified stock configuration adversely affected driveability. The FIDC system demonstrated a modest fuel savings, but with the penalty of increased emissions, and loss of driveability A R H

N78-34008# Burns and McDonnell, Kansas City, Mo
ASSESSMENT OF THE ROLE OF ADVANCED TECHNOLOGIES IN SMALL UTILITIES Final Report

P Steitz and G Mayo May 1978 173 p Sponsored by the Electric Power Research Inst

(EPRI-EM-696-Vol-2) Avail NTIS HC A08/MF A01

The potential role of six advanced technologies in small municipal and rural electric utility systems was assessed by comparing the economics of utilizing these advanced technologies with the economics of conventional generation types. The technologies examined included a 5-MW coal-fired diesel engine, a 5-MW coal-fired closed cycle combustion turbine, a 2-MW coal-fired Stirling engine, a 2-MW oil-fired Stirling engine, a 1-MW organic Rankine cycle bottoming on a 5-MW diesel and a 1-MW two-phase engine bottoming on a 5-MW diesel engine. If the heat rates projected are achieved, significant market penetration could be realized at capital costs of \$250 to \$300 per kilowatt in 1975 dollars. The coal-fired diesel has the lowest break-even capital cost and, even allowing for the uncertainties of operation and maintenance, costs would be only marginally attractive at a cost above \$500/kW. The coal-fired combustion turbine and the coal-fired Stirling engine could be attractive at costs below \$450/kW and \$650/kW respectively ERA

SUBJECT INDEX

ENERGY / A Continuing Bibliography (Issue 20)

JANUARY 1979

Typical Subject Index Listing

The subject heading is a key to the subject content of the document. The title or title and title extension provides the user with a brief description of the subject matter. The report number helps to indicate the type of document cited (e.g. NASA report, translation, NASA contractor report). The issue page and accession numbers are located beneath and to the right of the title, e.g. 17 p0120 N78-11260. Under any subject heading, the accession numbers are arranged in sequence with the /A4 accession numbers appearing first.

A

ABLATION

Laser acceleration of reactor-fuel pellets 20 p0538 A78-53690

ABSORBERS (EQUIPMENT)

Indoor test for thermal performance evaluation of Sunworks (liquid) solar collector [NASA-CR-150573] 18 p0268 N78-19650

ABSORBERS (MATERIALS)

air quality resulting from geothermal resource
development in the Imperial Valley
[UCRL-79388] 20 p0553 N78-28655

The air quality and oil spill implications of
Alaskan oil importation into Southern California
20 p0565 N78-29626

Exhaust gas emission factors in the motor traffic
field: Their impact on air pollution control
--- in West Germany
20 p0574 N78-30376

AIR SAMPLING

A study of production and growth of sulfate
particles in plumes from a coal-fired power plant
19 p0366 A78-41251

AIR TRAFFIC

Situation of air traffic in comparison to ground
transportation noting especially energetic
problems
[ILR-20] 19 p0392 N78-23072

AIR TRAFFIC CONTROL

Future needs and opportunities in the air traffic
control system
[GPO-98-931] 20 p0588 N78-31076

AIR TRANSPORTATION

Achievements of scientific and technological
progress in the development of transport and its
energetics in the USSR
17 p0073 A78-14131

Fuels outlook I - Transportation and the U.S.
petroleum resource, an aviation perspective
[AIAA PAPER 78-357] 18 p0178 A78-24032

Energy - Implications for transport
18 p0218 A78-29904

Planning a new era in air transport efficiency
20 p0469 A78-43357

Aviation futures to the year 2000
20 p0528 A78-52966

Cost/benefit tradeoffs for reducing the energy
consumption of the commercial air transportation
system
[NASA-CR-137925] 17 p0109 N78-10035

Air transportation energy efficiency
18 p0257 N78-18540

Federal policy options to effect fuel conservation
in the air industry
18 p0259 N78-18548

Measuring the impact on scheduled air lines
operations of restrictions in fuel availability
18 p0259 N78-18549

Situation of air traffic in comparison to ground
transportation noting especially energetic
problems
[ILR-20] 19 p0392 N78-23072

Supersonic transportation faced with energy savings
[AAAF-WT-77-28] 19 p0402 N78-24131

AIR WATER INTERACTIONS

Wind-wave power available to a wave energy
converter array
19 p0326 A78-36272

Modeling in the oceans and ocean sediments and
their response to fossil fuel carbon dioxide
emissions
20 p0535 A78-53464

AIRBORNE EQUIPMENT

Power conditioning systems for high-power,
airborne, pulsed applications
18 p0174 A78-23412

Modeling refinements for the rectified
superconducting alternator --- airborne power
supply
20 p0503 A78-49961

AIRCRAFT COMMUNICATION

The beamed power microwave transmitting antenna
19 p0340 A78-38841

AIRCRAFT CONSTRUCTION MATERIALS

Saving raw materials or saving energy in aircraft
construction
17 p0073 A78-14285

AIRCRAFT CONTROL

Airframes and aerodynamics --- aircraft design in
NASA Energy Efficient Transport program
20 p0469 A78-43359

AIRCRAFT DESIGN

Adaptation for economization, or adaptation for
the economization of energy --- in transport
aircraft design and operation
17 p0063 A78-12030

Energy savings - The viewpoint of an aircraft
manufacturer
17 p0063 A78-12031

The challenge of advanced fuel-conservative
aircraft - A manufacturer's view
[AIAA PAPER 78-362] 18 p0178 A78-24034

Canadian Symposium on Energy Conserving Transport
Aircraft, Ottawa, Canada, October 3, 4, 1977,
Proceedings
18 p0226 A78-31301

The NASA Aircraft Energy Efficiency Program
18 p0226 A78-31302

[GMP-2690-SECT-7.109] 19 p0440 N78-26335
Survey and analysis of selected topics within the Energy Research and Development Administration's (ERDA) materials research and development programs [DOE/ET-0006] 20 p0589 N78-31170

ALPHA PARTICLES

- Plasma engineering problems associated with superthermal fusion products
19 p0358 A78-40081

ALTERNATING CURRENT

- Thermoelectric power and ac conductivity of A-type Wd203
19 p0332 A78-36964

ALTERNATIVES

- Alternative fuels utilization program [UCID-17645] 19 p0414 N78-25241
Viewpoints on key issues and evaluation criteria for assessing the potential of alternative nuclear energy systems for improving proliferation resistance [TID-28078] 19 p0464 N78-27594

ALUMINUM

- GaAs solar cell development
17 p0138 N78-13544
Friction and wear of selected metals and alloys in sliding contact with AISI 440 C stainless steel in liquid methane and in liquid natural gas [NASA-TP-1150] 18 p0273 N78-20512

ALUMINUM ALLOYS

- Corrosion fatigue of 5086-H34 aluminum in sea water --- for ocean thermal energy conversion
19 p0305 A78-33344
Methanation activity of Raney nickel catalysts: Effect of proportion of NiAl₃ and Ni₂Al₃ in precursor alloys [PB-279656/3] 20 p0557 N78-29198
Study of corrosion and its control in aluminum solar collectors [COO-2934-4] 20 p0567 N78-30214

ALUMINUM CHLORIDES

- High energy density pelletized aluminum chloride thermal batteries. Part 2: Cathode screening [AD-A043659] 17 p0120 N78-11502

ALUMINUM COATINGS

- Possible selective solar photothermal absorber - Ni dendrites formed on Al surfaces by the CVD of Ni₂CO/4
18 p0221 A78-30302

ALUMINUM COMPOUNDS

- High efficiency GaAs solar cells
17 p0137 N78-13542

ALUMINUM GALLIUM ARSENIDES

- Comparative radiation resistance calculation for graded- and constant-composition n Al_{1-x}Ga_x/1-x/As-p Al_{1-z}Ga_z/1-z/As solar cells
19 p0338 A78-38551
Photocells based on AlGaAs heterostructure with a transition layer
19 p0341 A78-38941
Organometallic-sourced VPE AlGaAs/GaAs concentrator solar cells having conversion efficiencies of 19%
20 p0473 A78-43706
Graded band-gap pAl_{1-x}Ga_x/1-x/As-nGaAs heterojunction solar cells prepared by molecular beam epitaxy
20 p0516 A78-52625
Gallium arsenide solar cells for use with concentrated sunlight
20 p0521 A78-52811
LPE growth of GaAs-Ga_{1-x}Al_x/x/As solar cells
20 p0536 A78-53495

ALUMINUM OXIDES

- Fabrication and characterization of solar cells using dendritic silicon thin films grown on alumina ceramic
17 p0013 A78-10916
Optical properties of selectively absorbing metal/insulator composite films
19 p0324 A78-36032
Alumina-plasma interaction in the Petula tokamak
19 p0378 A78-42211
The development of beta-alumina for use in electro-chemical cells - A survey
20 p0498 A78-49288

AMBIENT TEMPERATURE

- Helio-stat structural stability as a function of solar heating and ambient temperature changes
20 p0477 A78-43976
Integration of infra-red ambient temperature and wind conditions in flat collector performance prediction
20 p0545 N78-28537

AMBIPOLAR DIFFUSION

- The ambipolarity paradox in toroidal diffusion, revisited
19 p0380 A78-42259

AMMONIA

- Ammonia synthesis gas and petrochemicals from cattle feedlot manure
17 p0035 A78-11132
Fume formation in ammonia scrubbers [ASME PAPER 77-WA/APC-2] 19 p0297 A78-33127
Market definition, commercial development plan, and OTEC financing - A summary of 1976 APL work for the U.S. Maritime Administration
19 p0302 A78-33313
Preliminary analysis of the effects of sea water leakage on the performance of the ammonia cycle --- in Ocean Thermal Energy Conversion plants
19 p0306 A78-33351
Production of ammonia using coal as a source of hydrogen [PB-271916/9] 17 p0130 N78-13237
Production economics for hydrogen, ammonia and methanol during the 1980-2000 period [BNL-50663] 19 p0415 N78-25243
Experimental study of heat transfer enhancement for ammonia condensing on vertical fluted tubes [ORNL-5356] 19 p0429 N78-25623
Translations on USSR science and technology: Physical sciences and technology, no. 40, methods of gas production for ammonia synthesis [JPES-71447] 20 p0555 N78-28672
A method of converting Baltic shale to process gas for ammonia synthesis
20 p0555 N78-28673
Modern schemes of process gas production for ammonia synthesis
20 p0555 N78-28674
Prospects for the use of chamber gas
20 p0555 N78-28675
Conversion of cattle feedlot manure to ethylene and ammonia synthesis gas [PB-280189/2] 20 p0602 N78-32291

AMORPHOUS SEMICONDUCTORS

- Solar cells using Schottky barriers on amorphous silicon
17 p0025 A78-11045
Anomalous temperature dependence observed on the photovoltage of Se-based amorphous thin film-SnO₂ heterostructures
18 p0222 A78-30644
Work function and Auger measurements of the initial oxidation of hydrogenated amorphous Si and of single-crystal Si
20 p0473 A78-43725
A model for amorphous silicon solar cells
20 p0519 A78-52792
New model of conduction mechanisms in disordered and amorphous photovoltaic devices
20 p0521 A78-52806
Prospects for the use of amorphous semiconductors in solar energy conversion
20 p0533 A78-53420
Amorphous semiconductors in photovoltaic and solar thermal conversion [BNL-24216] 20 p0621 N78-33584

AMPLIFIER DESIGN

Design of the power amplifier for the BEGLF at LASL
 --- High Energy Gas Laser Facility
 19 p0349 A78-39861

ANAEROBES

Biomass as an energy mechanism
 17 p0033 A78-11116

The anaerobic digestion of *Macrocystis pyrifera*
 under mesophilic conditions --- for synthetic
 fuel recovery
 17 p0035 A78-11135

Two-phase anaerobic digestion --- for
 synthane-from-waste conversion
 17 p0036 A78-11137

The economics of SNG production by anaerobic
 digestion of specially grown plant matter ---
 synthetic natural gas
 17 p0036 A78-11138

Multi-stage digestion of municipal solid waste to
 fuel gas
 18 p0218 A78-29868

Fast production of methane by anaerobic digestion
 [COO-2900-11]
 19 p0416 N78-25252

Anaerobic fermentation of simulated in-situ oil
 shale retort water
 [LBL-6855]
 19 p0431 N78-25646

ANALOG DATA

A data acquisition system for in situ measurements
 of terrestrial photovoltaic array performance
 17 p0023 A78-11029

Programmable controls: A control engineer's dream
 --- analog controls for automotive gas turbines
 and other engines
 20 p0575 N78-30380

ANALOG SIMULATION

A simplified physics airflow model for evaluating
 wind power sites in complex terrain
 19 p0340 A78-38791

ANALYSIS OF VARIANCE

Variance analysis of wind characteristics for
 energy conversion
 17 p0092 A78-17653

ANALYTICAL CHEMISTRY

Chemical geothermometers and mixing models for
 geothermal systems
 17 p0062 A78-11491

ANCHORS (FASTENERS)

Anchor systems --- for offshore power plants
 19 p0303 A78-33328

ANEMOMETERS

Flow field analysis
 18 p0265 N78-19623

ANIONS

Acceleration of one ampere negative ion beams to
 energies up to 120 keV
 19 p0348 A78-39832

ANISOTROPIC MEDIA

Optimal design of anisotropic /fiber-reinforced/
 flywheels --- for energy storage
 17 p0092 A78-17789

Observations of anisotropic diffused layer sheet
 resistance in EFG silicon ribbon solar cells ---
 Edge-defined Film-fed Growth
 18 p0223 A78-30648

Electrical dissipation effects on propagation of
 magneto-hydrodynamic waves in anisotropic media
 19 p0327 A78-36321

ANNEALING

Merits of ion-implantation processes in
 conjunction with appropriate annealing procedure
 for fabrication of silicon solar cells
 17 p0015 A78-10945

Annealing of GaAs solar cells damaged by electron
 irradiation
 18 p0219 A78-30192

Influence of heat treatment on solar energy
 collector optical properties
 20 p0490 A78-46136

Study of ion implanted n+/p+ layers for silicon
 solar cells
 20 p0519 A78-52782

ANNUAL VARIATIONS

Seasonal solar collector performance with maximum
 storage
 17 p0078 A78-15410

Specific output of windmills - A discovery
 17 p0078 A78-15783

Estimation of the monthly average of the diffuse
 component of total insolation on a horizontal
 surface
 17 p0105 A78-19890

Selection of a method for calculating parameters
 of storage devices used at wind and solar
 installations
 19 p0326 A78-36138

Effect of atmospheric variability on energy
 utilization and conservation, summary of research
 [COO-1340-55]
 20 p0584 N78-30689

ANODES

Stabilization of n-type semiconductors to
 photoanodic dissolution by competitive electron
 transfer processes
 19 p0343 A78-39462

Thermodynamic potential for the anodic dissolution
 of n-type semiconductors - A crucial factor
 controlling durability and efficiency in
 photoelectrochemical cells and an important
 criterion in the selection of new
 electrode/electrolyte systems
 19 p0344 A78-39465

Competitive oxidation at semiconductor photoanodes
 19 p0344 A78-39466

Solar energy conversion using semiconducting
 photoanodes
 20 p0469 A78-43388

ANODIZING

Innovative preparation of thin film CdS-Cu₂S
 terrestrial cells by an anodization process
 20 p0528 A78-52897

ANTARCTIC REGIONS

West Antarctic ice sheet and CO₂ greenhouse effect
 - A threat of disaster
 18 p0175 A78-23492

ANTENNA ARRAYS

Candidate locations for SPS rectifying antennas
 [NASA-TM-78146]
 17 p0138 N78-13553

ANTENNA RADIATION PATTERNS

New developments in electromagnetic energy beaming
 18 p0224 A78-30883

The beamed power microwave transmitting antenna
 19 p0340 A78-38841

ANTENNAS

Satellite Power Systems (SPS) concept definition
 study: SPS point design definition update
 [NASA-CR-150690]
 20 p0600 N78-32164

ANTHRACENE

An investigation of coal solubility in anthracene
 oils
 18 p0195 A78-27745

Photon energy storage in organic materials - The
 case of linked anthracenes
 18 p0220 A78-30267

Photoisomerization of bis 9-anthryl methane and
 other linked anthracenes: The role of excimers
 and biradicals in photodimerization
 [AD-A051336]
 19 p0408 N78-24665

ANTIMONY COMPOUNDS

Thermoelectric efficiency of some compositions
 from the /GeTe/x-/AgSbTe₂/1-x system
 20 p0483 A78-44472

ANTIREFLECTION COATINGS

Comparative testing of high efficiency silicon
 solar cells
 17 p0014 A78-10937

Fired through printed contacts on antireflection
 coated silicon terrestrial solar cells
 17 p0016 A78-10956

Textured surface cell performance characteristics
 17 p0019 A78-10996

Single crystal and polycrystalline GaAs solar
 cells using AMOS technology
 17 p0025 A78-11044

Simplified fabrication of GaAs homojunction solar
 cells with increased conversion efficiencies
 18 p0216 A78-29199

Sputtered metal silicide solar selective absorbing
 surfaces
 18 p0221 A78-30303

Silicon monoxide antireflection coatings for
 InP/CdS solar cells
 18 p0221 A78-30305

Optical performance of absorber-reflector
 combinations for photothermal solar energy
 conversion
 19 p0316 A78-35411

Back-reflection effect on the long-wavelength spectral response of solar cells 20 p0507 A78-50300

Nonreflecting vertical junction silicon solar cell optimization [AD-A046150] 17 p0151 N78-14636

Optimization of coatings for flat plate solar collectors, phase 2 [COO-2930-4] 17 p0152 N78-14648

Optimization of coatings for flat plate solar collectors, phase 2 [COO-2930-12] 19 p0444 N78-26565

High output solar cell with multilayer AR coating [AD-A054226] 20 p0593 N78-31545

Characterization of solar cells for space applications. Volume 3: Electrical characteristics of OCLI hybrid MLAR solar cells as a function of intensity and temperature [NASA-CR-157605] 20 p0604 N78-32545

APPROPRIATIONS

Solar energy and Congress --- program budget appropriations 17 p0083 A78-16828

NASA authorization, 1979, volume 1, part 3 [GPO-25-291] 20 p0611 N78-32926

AQUEOUS SOLUTIONS

Non-corrosive, non-freezing, and non-toxic heat transfer fluids for solar heating and cooling 17 p0045 A78-11240

Aqueous heat-carrying liquids for solar houses 18 p0213 A78-28587

Organics in aqueous process streams of a coal conversion bench-scale unit using the hydrocarbonization process - HPLC and GC/MS analysis 18 p0232 A78-32104

AQUICULTURE

Ocean energy resources; Proceedings of the Energy Technology Conference, Houston, Tex., September 18-23, 1977 17 p0006 A78-10651

The U.S. Navy's Ocean Food and Energy Farm Project 17 p0007 A78-10657

Waterhyacinth biomass yield potentials 17 p0034 A78-11123

A systems analysis of bioconversion with microalgae --- combined sewage treatment and methane production 17 p0034 A78-11124

Possibilities of biomass from the ocean - The Marine Farm Project 18 p0208 A78-28362

Mass production of algae - Bioengineering aspects --- for wastewater treatment, protein production, fertilizers, drug and colloid manufacture 18 p0208 A78-28363

Biological constraints on seaweed culture --- for biomass conversion systems 18 p0208 A78-28368

Potential mariculture yield of sea thermal power plants. II - Food chain efficiency 19 p0301 A78-33309

Artificial upwelling induced by ocean currents - Theory and experiment 19 p0326 A78-36274

AQUIFERS

Modeling underground storage in aquifers of hot water from solar power systems 17 p0050 A78-11298

Broadlands - A gas-dominated geothermal field 19 p0330 A78-36025

Two-phase flow in geopressured geothermal wells 20 p0475 A78-43775

ARC DISCHARGES

Near-cathode region of contracted discharge at MHD-generator metallic electrodes 20 p0486 A78-45655

Construction of a mathematical model of the arc-discharge operational mode of the electrodes of an MHD generator 20 p0498 A78-49039

ARC HEATING

Low cost silicon solar array project silicon materials task [NASA-CR-157092] 19 p0407 N78-24640

ARCHITECTURE

Thermal mass and beadwalls in two new buildings --- for solar energy storage 17 p0048 A78-11276

Computer aided preliminary energy analysis and energy use options for architectural students 17 p0057 A78-11359

Buildings design with reference to the natural utilization of solar energy 18 p0212 A78-28580

Proposals for the design and construction of solar houses 18 p0212 A78-28581

Thermal-engineering preliminaries for the retrofitting of old houses to solar-energy utilization 18 p0213 A78-28583

Solar architecture; Proceedings of the Aspen Energy Forum, Aspen, Colo., May 27-29, 1977 19 p0336 A78-38051

Solar energy - Architectural imperative and problem of collectors 19 p0375 A78-42158

Solar cooling and heating: Architectural, engineering, and legal aspects; Proceedings of the Forum, Miami Beach, Fla., December 13-15, 1976. Volumes 1, 2, & 3 20 p0476 A78-43968

ARCTIC OCEAN

Study of satellite communications system serving off-shore oil and gas exploitation activities in European sea areas, volume 1 --- forecasting offshore structures and requirements based on ECS [CWJ1/C-640003-VOL-1] 17 p0134 N78-13308

Study of satellite communications system serving off-shore oil and gas exploitation activities in European sea areas, volume 2 --- transmission system analysis [CWJ1/C-640003-VOL-2] 17 p0134 N78-13309

Study of satellite communications system serving off-shore oil and gas exploitation activities in European sea areas, volume 3 [CWJ1/C-640003-VOL-3] 17 p0134 N78-13310

Study of satellite communications system serving off-shore oil and gas exploitation activities in European sea areas, volume 4 [CWJ1/C-640003-VOL-4] 17 p0134 N78-13311

Study of satellite communications system serving off-shore oil and gas exploitation activities in European sea areas. Volume 5: Summary [CWJ1/C-640003-VOL-5-SUMM] 17 p0134 N78-13312

ARCTIC REGIONS

The energy problem of the North --- power requirements, resources, and technological evolution 17 p0071 A78-13989

ARGENTINA

National solar program for research and development in Argentina 20 p0543 N78-28524

ARGON LASERS

Implosion experiments with D2, He-3 filled microspheres 18 p0235 A78-32440

ARGON PLASMA

Study of a collisional plasma rotating between two cylinders 19 p0293 A78-32718

Preliminary results on the conversion of laser energy into electricity 19 p0313 A78-34631

ARID LANDS

Solar energy applications for the arid areas --- for drought solution in developing African countries 20 p0543 N78-28519

Potential of arid zone vegetation as a source of substrates [LBI-7214] 20 p0556 N78-28777

AROMATIC COMPOUNDS

Polycyclic aromatic hydrocarbons in the exhaust gas of motor vehicles 17 p0061 A78-11459

Photooxidation of aromatic hydrocarbons by Europium(III) salts 20 p0480 A78-44097

Energy sources of polycyclic aromatic hydrocarbons [CONF-770130-2] 17 p0148 N78-14181

ARRAYS

- Solar energy conversion: An analysis of impacts
on desert ecosystems
[COO-4339-1] 19 p0427 N78-25612
Status of wraparound contact solar cells and arrays
[NASA-TM-78911] 19 p0443 N78-26543

ARTIFICIAL SATELLITES

- Regimes for the ocean, outer space, and weather
--- Book 18 p0189 A78-26399
Solar power satellite: System definition study.
Part 1, volume 1: Executive summary
[NASA-CR-151554] 17 p0129 N78-13099
Solar power satellite. System definition study.
Part 1, volume 5: SPS transportation.
Representative system descriptions
[NASA-CR-151558] 17 p0130 N78-13103
Orbital motion of the solar power satellite
[NASA-CR-151603] 17 p0158 N78-15148
Design, fabrication and testing of a CPA for use
in the solar power satellite
[NASA-CR-159410] 20 p0589 N78-31143

ASHES

- Comparison of levels of trace elements extracted
from fly ash and levels found in effluent waters
from a coal-fired power plant 17 p0001 A78-10062
Ash fouling in the combustion of low rank Western
U.S. coals 17 p0078 A78-15827
Physical and morphological studies of
size-classified coal fly ash 18 p0222 A78-30555
A fluidized-bed ash-agglomeration gasifier
20 p0472 A78-43421
Filtration model for coal fly ash with glass fabrics
[PB-276489/2] 18 p0289 N78-21667
Investigation of the mechanism of fly-ash
formation in coal-fired utility boilers
[PB-2205-8] 19 p0433 N78-25671

ASPHALT

- Desulfurization of petroleum residues and their
carbonization properties 19 p0337 A78-38406

ASSEMBLIES

- Installation package for concentrating solar
collector panels
[NASA-CR-150780] 20 p0604 N78-32548

ASSEMBLING

- DOE LeRC photovoltaic systems test facility
[NASA-TM-78923] 19 p0443 N78-26549

ASSESSMENTS

- Environmental assessment of low/medium BTU
gasification
[PB-276580/8] 18 p0281 N78-21325
Environmental assessment of coal liquefaction
[PB-278333/0] 19 p0451 N78-26654

ASYMPTOTIC METHODS

- Use of asymptotic methods in vibration analysis
18 p0265 N78-19620

ASYNCHRONOUS MOTORS

- Problem of end effect in a linear induction MHD
machine at arbitrary load current 18 p0167 A78-21395
Three-phase induction motor loads on a variable
frequency wind electric generator 18 p0231 A78-32050

ATMOSPHERIC ATTENUATION

- Estimates of satellite-to-earth microwave
attenuation by cloud, rain, oxygen, and water
vapor
[AD-A052581] 19 p0404 N78-24431

ATMOSPHERIC BOUNDARY LAYER

- Nocturnal boundary-layer wind maxima and the
problem of wind power assessment 18 p0179 A78-24314
Applications of wind tunnels to investigations of
wind-engineering problems
[AIAA 78-812] 18 p0233 A78-32366
A practical method for determining wind frequency
distributions for the lowest 200 m from routine
meteorological data --- for windpower studies
20 p0485 A78-45251

ATMOSPHERIC CHEMISTRY

- Energy and the atmosphere: A physical-chemical
approach --- Book 19 p0327 A78-36497

- MAP35 - An investigation of atmospheric, energy
related pollutants in the northeastern United
States 19 p0366 A78-41284

ATMOSPHERIC CIRCULATION

- Postulated weather modification effects of large
energy releases
[BNWL-2162] 17 p0117 N78-10672
Effect of atmospheric variability on energy
utilization and conservation, summary of research
[COO-1340-55] 20 p0584 N78-30689

ATMOSPHERIC COMPOSITION

- West Antarctic ice sheet and CO2 greenhouse effect
- A threat of disaster 18 p0175 A78-23492
Relationships among observed short-term maximum
sulfur dioxide concentrations near coal-fired
power plants
[APCA PAPER 77-29,5] 18 p0185 A78-25443
A modeling analysis of the impact of the energy
shortage on ambient air quality 19 p0320 A78-35683

- CO2 and spaceship earth 20 p0495 A78-45321
The fate of fossil fuel CO2 in the oceans --- Book
20 p0535 A78-53463
The land's response to more carbon dioxide
20 p0535 A78-53465
Global carbon dioxide production from fossil fuels
and cement, A.D. 1950-A.D. 2000 20 p0535 A78-53467

- Dispersion and analysis of methane in the atmosphere
[CI-1976-16] 19 p0450 N78-26644
Atmospheric CO2 consequences of heavy dependence
on coal 20 p0586 N78-30720

ATMOSPHERIC DIFFUSION

- Comparison of calculated and observed
characteristics of plumes from two coal-fired
power plants located in complex terrain 18 p0167 A78-21821
Ambient air quality in complex terrain 18 p0167 A78-21833
Dispersion and control of atmospheric emissions:
New-energy-source pollution potential --- From
AIChE meetings 19 p0320 A78-35676

- The behavior of Aitken nucleus plumes from
coal-fired power plants in the Midwest 20 p0515 A78-52083
Evaluation of the Gaussian plume model at Maryland
power plants 20 p0515 A78-52125

ATMOSPHERIC EFFECTS

- The fraction of solar energy available for direct
conversion processes 18 p0205 A78-28168
Energy use and climatic changes 20 p0513 A78-51814
The application of a 2-D convective cloud model to
waste heat release from proposed nuclear energy
centers 20 p0537 A78-53639
Effects of atmospheric variability on energy
utilization and conservation 20 p0606 N78-32567

ATMOSPHERIC HEAT BUDGET

- Modeling the effect of atmospheric carbon dioxide
on the global radiative heat balance 17 p0068 A78-13447
Heat balance of earth --- Russian book
20 p0492 A78-46579

ATMOSPHERIC MODELS

- Modeling the effect of atmospheric carbon dioxide
on the global radiative heat balance 17 p0068 A78-13447
Short communication on the optimum orientation of
solar collectors - An alternative approach 17 p0075 A78-14692
Comparison of calculated and observed
characteristics of plumes from two coal-fired
power plants located in complex terrain 18 p0167 A78-21821
The application of a 2-D convective cloud model to
waste heat release from proposed nuclear energy
centers 20 p0537 A78-53639

On the improvement of Schottky solar cells
20 p0526 A78-52870
Dry barrier formation of Cu₂S-CdS junctions
20 p0526 A78-52881

BASALT

Magma - A potential source of fuels
19 p0311 A78-34398

BATTERY CHARGERS

Pulse battery charger employing 1000 ampere transistor switches
18 p0231 A78-31974

BEAM CURRENTS

Engineering of beam direct conversion for a 120-kV, 1-MW ion beam
19 p0348 A78-39834

BEAMS (RADIATION)

Analysis and classification of methods for calculating concentrating systems --- for solar energy collection
17 p0064 A78-12386
New developments in electromagnetic energy beaming
18 p0224 A78-30883
Analysis and classification of concentrating-system design methods --- for solar energy collection
19 p0331 A78-36863

BEARING (DIRECTION)

Development of satellite flywheels utilizing magnetic bearings with passive radial centering - Concepts and results
[AIAA 78-571] 19 p0294 A78-32912

BEARINGS

Development of compliant foil bearings for automotive gas turbines
20 p0570 N78-30308

BEDROCK

ROCKBED - A computer program for thermal storage
17 p0050 A78-11304

BEDS (GEOLOGY)

A numerical simulation of heat transfer in rock beds
17 p0050 A78-11305

Coming - In situ gasification
19 p0322 A78-35783

BEDS (PROCESS ENGINEERING)

A model for moving-bed coal gasification reactors
20 p0517 A78-52722
Comparative description of coal feeding systems for fixed bed pressure gasification
17 p0131 N78-13247
The conversion of model coal liquids compounds to Naphtha species
[PB-275891/0] 18 p0272 N78-20291
Upgrading of coal liquids for use as power generation fuels
[EPRI-AP-444] 19 p0427 N78-25608
Optimization of pyrolytic conversion of coal to clean fuel --- computer programs
[FE-2253-5] 19 p0427 N78-25609

BENDING VIBRATION

Flutter of Darrieus wind turbine blades
18 p0265 N78-19624

BERYLLIUM

A Be p-silicon MIS solar cell
20 p0494 A78-48056
Friction and wear of selected metals and alloys in sliding contact with AISI 440 C stainless steel in liquid methane and in liquid natural gas
[NASA-TP-1150] 18 p0273 N78-20512

BIBLIOGRAPHIES

Solar energy bibliography
[NASA-TM-X-73398] 17 p0138 N78-13554
State energy conservation program sourcebook. Volume 6: Bibliography

methanol fuel production from surplus Canadian
forest biomass. Part 2: Working papers
[NP-22159/2]
19 p0393 N78-23253
- Fuel gas production from animal waste, phase 1
[COO-2991-23]
19 p0415 N78-25248
- Fast production of methane by anaerobic digestion
[COO-2900-11]
19 p0416 N78-25252
- Energy from biomass: An overview of environmental
aspects
[CONF-780109-3]
19 p0446 N78-26585
- Research and development for fuels from woody
biomass
[TID-28024]
20 p0541 N78-28263
- Impact of novel energy sources: OTEC, wind,
geothermal, biomass
20 p0550 N78-28619

BIO MEDICAL DATA

SUBJECT INDEX

- 1
- Biological conversion of biomass to methane
[COO-2917-6] 20 p0553 N78-28648
- Biological conversion of biomass to methane
[COO-2917-7] 20 p0554 N78-28666
- Potential of arid zone vegetation as a source of
substrates 20 p0556 N78-28777
- Alcohols and gaseous fuels from biomass 20 p0578 N78-30404
- BIO MEDICAL DATA**
- Health and economic costs of alternative energy
sources [IAEA-CN-36/448] 19 p0390 N78-22484
- BIOSYNTHESIS**
- Hydrogen from sunlight: The biological answer -
Development of a low-cost biological solar panel 17 p0056 A78-11350
- BITUMENS**
- Analysis and scale-up consideration of bituminous
coal liquefaction rate processes 18 p0184 A78-25322
- A petrographic classification of solid residues
derived from the hydrogenation of bituminous coals 18 p0192 A78-26592
- Pyrolysis of subbituminous coal in relation to
in-situ coal gasification 18 p0229 A78-31750
- Hydroconversion of a bituminous coal with CO-H₂O 19 p0342 A78-39125
- Measurement of the flow properties and capillary
pressure relationships of certain coals
pertaining to underground coal gasification [COO-4129-3] 19 p0410 N78-24680
- BLADES**
- The Mass wind furnace blade design 18 p0267 N78-19641
- BLOCK DIAGRAMS**
- Programmable controls: A control engineer's dream
--- analog controls for automotive gas turbines
and other engines 20 p0575 N78-30380
- BLOOD**
- Implanted energy conversion system
[PB-272609/9] 18 p0243 N78-16464
- BLUE GREEN ALGAE**
- Hydrogen from sunlight: The biological answer -
Development of a low-cost biological solar panel 17 p0056 A78-11350
- Physiological studies of nitrogen fixation by
blue-green algae 17 p0128 N78-12647
- Solar energy conversion with hydrogen producing
algae [SAM/0034-77/11] 19 p0460 N78-27565
- Photoproduction of hydrogen by marine blue-green
algae [PB-280995/2] 20 p0612 N78-33264
- BOATS**
- Speed polar of a wind turbine powered cargo boat 17 p0094 A78-18094
- BODIES OF REVOLUTION**
- Bending free toroidal shells for tokamak fusion
reactors 19 p0351 A78-39915
- BOILERS**
- Densified refuse derived fuels - An alternative
concept 17 p0005 A78-10634
- Experience with burning industrial wastes in
steam-generating and high-temperature heat
recovery systems 17 p0006 A78-10636
- The application of solar energy to boiler
feedwater heating in steam-electric power plants 17 p0052 A78-11320
- Solar hybrid repowering 17 p0055 A78-11343
- Comparative analysis of the geometrical
characteristics of solar power plant boilers 17 p0064 A78-12393
- Thermal testing of the GT-35 gas turbine plant in
the steam turbine-gas turbine plant with a
high-head steam generator 17 p0066 A78-13157
- Ash fouling in the combustion of low rank Western
U.S. coals 17 p0078 A78-15827
- Operational limitations of direct contact boilers
for geothermal applications [ASME PAPER 77-HT-5] 17 p0089 A78-17480
- A MHD simulation test facility for investigating
the thermal properties of a slag/seed coated
radiant boiler and superheater for a 2000 MWT
MHD power plant [ASME PAPER 77-HT-64] 17 p0090 A78-17496
- Future peak-power plants based on hydrogen-oxygen
rocket steam generators 17 p0100 A78-18846
- Technical concepts and economic prospects for
thermal hydrogen power plants for peak load
generation 17 p0100 A78-18847
- Evaluation of two industrial boilers with
combustion modifications for reduced pollutant
emissions [ASME PAPER 77-WA/APC-1] 19 p0297 A78-33126
- Coal fired non-equilibrium, Closed Cycle MHD/steam
power generation [ASME PAPER 77-WA/ENER-8] 19 p0298 A78-33146
- Emissions from FBC boilers --- Fluidized Bed
Combustion 19 p0310 A78-34186
- Methanol - A boiler fuel alternative 19 p0321 A78-35704
- Comparative analysis of geometric characteristics
of solar power plant boilers 19 p0332 A78-36870
- Reducing nitrogen oxides in the flue gases from
gas/oil-fired boilers at high-capacity power
stations 19 p0335 A78-37862
- Interface design problems between coal fired
boilers and SO₂ scrubbing systems 20 p0504 A78-50135
- Reduction of nitrogen oxide emissions from field
operating package boilers, phase 3 [PB-269277/0] 17 p0121 N78-11526
- Material handling systems for the fluidized-bed
combustion boiler at Rivesville, West Virginia 17 p0133 N78-13265
- Energy consumption of environmental controls:
Fossil fuel, steam electric generating industry
[PB-273019/0] 18 p0244 N78-16476
- Operation and maintenance of particulate control
devices on coal-fired utility boilers [PB-274104/9] 18 p0251 N78-17505
- Central heating: Package boilers [ANL/CES/TE-77-6] 19 p0422 N78-25564
- Coal-fired alkali metal power system design study
[ORNL-TM-6000] 19 p0423 N78-25576
- Investigation of the mechanism of fly-ash
formation in coal-fired utility boilers [FE-2205-8] 19 p0433 N78-25671
- Industrial application of fluidized-bed combustion
--- boiler and plant design [FE-2461-5] 19 p0436 N78-26190
- Effect of liquid waste discharges from steam
generating facilities [BNWL-2393] 19 p0450 N78-26634
- Standards support and environmental impact
statement. Volume 2: Pronulgated standards of
performance for lignite-fired steam generators
[PB-279008/7] 19 p0466 N78-27621
- Flue gas desulfurization system capabilities for
coal-fired steam generators. Volume 2:
Technical report [PB-279417/0] 19 p0467 N78-27659
- Effects of alternative new source performance
standards on flue gas desulfurization system
supply and demand [PB-279080/6] 19 p0467 N78-27661
- On the economic optimization of the
magneto-hydrodynamic-steam power plant 20 p0548 N78-28595
- BORIDES**
- Materials for fuel cells [PB-269518/7] 17 p0113 N78-10573

- Observations on boron release from coal-fired
power plants 20 p0499 A78-49421

BORON ISOTOPES

Four Workshops in Alternate Concepts in Controlled Fusion. Part A: Executive summaries. Part B: Extended summaries. Part C: CTR using the p-B-11 reaction
[EPRI-ER-429-SR-PT-A] 18 p0290 N78-21927

BOUNDARY LAYER CONTROL

Studies of advanced transport aircraft
[NASA-TM-78697] 19 p0413 N78-25047

BOUNDARY LAYER FLOW

Forced convection heat transfer at an inclined and yawed square plate - Application to solar collectors' 17 p0076 A78-15053
Analysis of the seeded combustion gas boundary layer near a cold electrode 17 p0083 A78-16814

Catalyzed combustion in a flat plate boundary layer. I - Experimental measurements and comparison with numerical calculations
[LBI-6841] 18 p0230 A78-31953

The slagging MHD generator - A parametric study --- vapor condensation during coal combustion
[AIAA PAPER 78-1174] 20 p0485 A78-45135

Possible similarity solutions for free convection boundary layers adjacent to flat plates in porous media 20 p0497 A78-48854

BOUNDARY LAYER PLASMAS

Kinetic theory of plasma in the limiter-shadow region 19 p0378 A78-42212

The effect of electric field in the divertor scrape-off layer 19 p0379 A78-42215

Transport calculations for a wall-confined liner-compressed plasma 19 p0380 A78-42258

BOUNDARY LAYERS

Insulating wall boundary layer in a Faraday MHD generator 20 p0610 N78-32868

BRAKES (FOR ARRESTING MOTION)

Design considerations for an electric vehicle solid-state motor controller with regenerative braking capability 17 p0092 A78-17570

Computer simulation of an advanced hybrid electric-powered vehicle
[SAE PAPER 780217] 19 p0307 A78-33378

The efficiency improvement of electric vehicles by regenerative braking
[SAE PAPER 780291] 19 p0307 A78-33383

Brake system for the 17 meter vertical axis wind turbine
[SAND-77-1331] 19 p0461 N78-27569

BRAKING

For the latest in energy storage, try the flywheel 18 p0217 A78-29600

BRAYTON CYCLE

Analysis of closed cycle Brayton systems for solar electric power generation 17 p0053 A78-11324

Development of a ceramic receiver for a Brayton cycle solar electric power plant 18 p0165 A78-20624

Preliminary design study of an alternate heat source assembly for a Brayton isotope power system
[NASA-CR-135428] 20 p0549 N78-28608

BRAZIL

Utilization of solar energy in Brazil 20 p0543 N78-28525

Prospects of power generation from solar plants in the north east of Brazil 20 p0546 N78-28550

Energy analysis of Brazil 20 p0596 N78-31572

BREAKDOWN

'Local' breakdown criterion for a highly ionized gas stream 19 p0292 A78-32707

BREEDER REACTORS

Energy yield and fuel dynamics of the fusion breeder 17 p0041 A78-11191

What comes after oil and gas - Development trends offered by energy sources 18 p0223 A78-30709

Poloidal field coil design for a fusion-fission breeder reactor 19 p0354 A78-39977

The 1978 ERDA authorization; the Clinch River breeder reactor program, volume 4
[GPO-92-462] 19 p0413 N78-25006

BREMSSTRAHLUNG

Intensity dependence of inverse bremsstrahlung absorption in an inhomogeneous standing wave 19 p0332 A78-37139

BRILLOUIN EFFECT

Evolution of stimulated Brillouin to stimulated ion Compton scattering in a CO₂ laser-plasma interaction experiment 18 p0235 A78-32425

Effect of Faraday rotation on stimulated Brillouin backscattering --- in laser heated nuclear fusion reactor 19 p0369 A78-41909

Non-resonant pump field modification of the sidescatter threshold 19 p0381 A78-42264

BRINES

Testing of direct contact heat exchangers for geothermal brines
[ASME PAPER 77-HT-4] 17 p0089 A78-17479

Models for calculating density and vapor pressure of geothermal brines 18 p0206 A78-28249

Solar ponds for power production 19 p0376 A78-42164

Analysis of brine disposal in the Gulf of Mexico. 3: Capline sector
[PB-271292/5] 17 p0146 N78-13648

Materials evaluation for geothermal applications: Turbine materials
[UCRL-79360] 19 p0392 N78-23238

Study of brine treatment
[EPRI-ER-476] 19 p0430 N78-25633

Preliminary tests using a laser particle-size analyzer on geothermal brine
[UCID-17637] 19 p0430 N78-25634

Removal of silica from spent geothermal brine
[UCID-17702] 19 p0430 N78-25636

Corrosion of iron-base alloys versus alternate materials in geothermal brines
[PNL-2456] 19 p0454 N78-27264

Brine chemistry and combined heat/mass transfer. Volume 2: Appendixes
[EPRI-ER-635-VOL-2] 19 p0462 N78-27578

Conditioning of geothermal brine effluents for injection: Use of coagulants
[UCID-17716] 20 p0564 N78-29609

BROADBAND

Optimum design of wideband selective absorbers with provision for specified included layers --- for solar applications 19 p0323 A78-35796

BROADCASTING

Technology assessment in a dialectic key
[IIASA-PP-77-1] 17 p0123 N78-11896

BROMINE COMPOUNDS

Corrective action program for bromochloromethane-containing fire-safe diesel fuel
[AD-A043323] 17 p0119 N78-11253

BUDGETING

Solar energy and Congress --- program budget appropriations 17 p0083 A78-16828

BUILDINGS

Solar building energy use analysis 17 p0045 A78-11243

Application of airborne infrared technology to monitor building heat loss 17 p0075 A78-14853

Solar energy and large building HVAC systems - Are they compatible --- Heating, Ventilating and Air Conditioning 17 p0078 A78-15408

Solar energy: Fundamentals in building design --- Book 17 p0081 A78-16275

A performance-optimized wind energy conversion system for space heating 18 p0171 A78-22251

Passive solar heating and cooling systems 18 p0175 A78-23425

Solar energy in office and industrial buildings
18 p0181 A78-24760

Solar design and installation experience ---
pyramidal optics for use in residential buildings
18 p0181 A78-24761

Legal problems of solar energy utilization
18 p0214 A78-28595

Energy conservation and thermal comfort in a New
York City high rise office building
19 p0311 A78-34380

Detection of heat loss from buildings through
aerial thermography Applications and methodology
20 p0469 A78-43325

Building application of solar energy. Study no.
2: Representative buildings for solar energy
performance analysis and market penetration
[NASA-CR-155325] 17 p0125 A78-12527

State solar energy legislation of 1976: A review
of statutes relating to buildings
[PB-273899/5] 18 p0261 A78-18567

Solar heating system for recreation building at
Scattergood School
[NASA-CR-150553] 18 p0274 A78-20605

Evaluation of the plan to conserve energy in
federal buildings through retrofit programs
[PB-275311/9] 18 p0276 A78-20627

Design and operation of a solar heating and
cooling system for a residential size building
[NASA-TM-78169] 19 p0420 A78-25546

Design data brochure: Solar hot air heater
[NASA-CR-150697] 19 p0421 A78-25548

Commercial applications of solar total energy
systems
[AI-ERDA-13203] 19 p0427 A78-25613

Energy consumption program: A computer model
simulating energy loads in buildings
20 p0541 A78-28132

Framework for a solar energy research and
development policy proposed for Indonesia and
its relevance to solar energy utilization in
building systems
20 p0543 A78-28521

Solar heat systems for use at high latitudes
20 p0545 A78-28534

Solar energy applications in UK buildings
20 p0545 A78-28538

Proceedings of a conference on solar energy for
heating greenhouses and greenhouse-residential
combinations
[CONF-770367] 20 p0564 A78-29610

Energy conservation: Buildings, volume 1. A
bibliography with abstracts
[NTIS/PS-78/0502/1] 20 p0564 A78-29617

Energy conservation: Buildings, volume 2. A
bibliography with abstracts
[NTIS/PS-78/0503/9] 20 p0564 A78-29618

Solar heating of buildings and domestic hot water
[AD-A054601] 20 p0581 A78-30664

Legal and institutional perspectives on solar
energy in Colorado. A case study of land use
and energy decision-making
[PB-279994/8] 20 p0586 A78-30710

Solar heating and cooling systems design and
development --- prototype development
[NASA-CR-150770] 20 p0592 A78-31532

Design data brochure: Solar hot water system
[NASA-CR-150699] 20 p0593 A78-31538

Some aspects of energy use in housing
20 p0596 A78-31570

Installation package for a domestic solar heating
and hot water system
[NASA-CR-150760] 20 p0604 A78-32547

Installation package for a solar heating and hot
water system
[NASA-CR-150757] 20 p0605 A78-32550

Environmental Development Plan (EDP): Solar
heating and cooling of buildings, 1977
[DOE/ZDP-0001] 20 p0606 A78-32565

Design package for a complete residential solar
space heating and hot water system
[NASA-CR-150795] 20 p0615 A78-33531

Commercial demand for energy: A disaggregated
approach
[ORNL/CON-15] 20 p0619 A78-33570

BUOYANCY

Effect of buoyancy on heat transfer rates in a
solar collector
19 p0375 A78-42153

BURNERS

Burner design criteria for NOx control from
low-Btu gas combustion. Volume 1: Ambient fuel
temperature
[PB-272614/9] 17 p0163 A78-15607

Burner design criteria for NOx control from
low-Btu gas combustion: Volume 2. Elevated
fuel temperature
[PB-280199/1] 20 p0599 A78-31615

BURNING RATE

Some characteristics of oil consumption measured
by hydrogen fueled engine
[ASLE PREPRINT 77-1C-5B-1] 18 p0209 A78-28434

Analysis of spray combustion in a research gas
turbine combustor
19 p0333 A78-37297

BUS CONDUCTORS

Optimum shape of the bus bar on solar cells of
arbitrary shape
18 p0176 A78-23638

Synchronization of wind turbine generators against
an infinite bus under gusting wind conditions
[IEEE PAPER F 77 675-2] 18 p0219 A78-30196

BUTANES

Two phase working fluids in solar collectors
[AIAA PAPER 78-354] 18 p0178 A78-24030

BYPASSES

Shunt regulation electric power system
[NASA-CASE-GSC-10135] 18 p0247 A78-17296

C

CABLES (ROPES)

Vertical axis wind turbine tie-down design with an
example
[SAND-77-1919] 19 p0429 A78-25631

CADASTRAL MAPPING

Development of a solar-power cadaster
19 p0331 A78-36862

CADMIUM

Influence of Cd and Zn doping on the electrical
and optical properties of bulk Cu₂S
17 p0018 A78-10979

CADMIUM SELENIDES

Semiconductor electrodes. IV -
Photoelectrochemical cells with mixed
polycrystalline n-type CdS-CdSe electrodes
18 p0233 A78-32233

Solar conversion efficiency of pressure sintered
cadmium selenide liquid junction cells
19 p0344 A78-39469

S/Se substitution in polycrystalline CdSe
photoelectrodes - Photoelectrochemical energy
conversion
20 p0515 A78-52195

Conversion of visible light to electrical energy -
Stable cadmium selenide photoelectrodes in
aqueous electrolytes
20 p0530 A78-53330

CADMIUM SULFIDES

Si/CdS heterojunction solar cells
17 p0002 A78-10485

The relationships between preparation parameters,
operating characteristics and physical processes
in Cu₂S-CdS thin film solar cells
17 p0017 A78-10971

An automatable integrated thin film solar cell array
17 p0017 A78-10972

Variation of short-circuit current spectral
response with Cu₂-x/S composition in thin film
Cu₂-x/S/CdS photovoltaic cells
17 p0017 A78-10973

Model of the CdS/Cu₂S heterojunction
17 p0017 A78-10974

The influence of the horizontal and vertical
structure of the p-n junction in Cu₂S-CdS solar
cells
17 p0018 A78-10975

Post-fabrication treatments, surface properties,
and front contact of Cu₂x/S-CdS solar cells
17 p0018 A78-10978

The formation of Cu₂S thin films for CdS solar
cells by sulfurization of copper with thiourea
17 p0018 A78-10980

CdS sprayed thin films - Electrical and optical
properties
17 p0018 A78-10981

Studies related to Zn/x/Cd_{1-x}/S-Cu₂S solar cells
17 p0018 A78-10982

CARBON DISULFIDE
CS₂ and COS in soil gases of the Roosevelt Hot Springs Known Geothermal Resource Area, Beaver County, Utah 20 p0511 A78-51603

CARBON MONOXIDE
The effect of ambient temperature and humidity on the carbon monoxide emissions of an idling gas turbine 17 p0065 A78-12557

Stoichiometric calculations concerning the Fischer-Tropsch synthesis 17 p0077 A78-15101

Effect of carbon monoxide on the reaction of hydrogen sulfide and calcium oxide
[ASME PAPER 77-WA/APC-6] 19 p0297 A78-33129

New concepts and results concerning the mechanism of carbon monoxide hydrogenation. I - Organic oxygen compounds produced during medium-pressure synthesis with iron catalysts. II - Evolution of reaction steps on the basis of detailed product composition and other data 19 p0337 A78-38404

Catalytic synthesis of hydrocarbons from carbon monoxide and hydrogen 20 p0530 A78-53328

Thermal conversion of oil-shale kerogen using CO and water at elevated pressures
[LEEC-78/1] 20 p0617 N78-33552

CARBON STEELS
Hydrogen attack - Influence of hydrogen sulfide --- on carbon steel 20 p0481 A78-44108

Corrosion of iron-base alloys versus alternate materials in geothermal brines
[PNL-2456] 19 p0454 N78-27264

CARBONATES
Carbonate rock - A resource for energy --- carbon dioxide source for hydrocarbon production 20 p0511 A78-51343

Molten carbonate fuel cell research at ORNL
[ORNL/TM-5886] 17 p0151 N78-14639

An improved method for analysis of hydroxide and carbonate in alkaline electrolytes containing zinc
[NASA-TM-78961] 20 p0549 N78-28607

National Fuel Cell Seminar. Program and abstracts
[CONF-770664-ABSTS] 20 p0564 N78-29614

Advanced fuel cell development
[ANL-77-56] 20 p0581 N78-30667

CARBONIZATION
Deactivation of hydrodesulfurization catalysts under coal liquids. I - Loss of hydrogenation activity due to carbonaceous deposits 18 p0203 A78-27919

Desulfurization of petroleum residues and their carbonization properties 19 p0337 A78-38406

Evaluation of coal carbonization processes 20 p0470 A78-43409

Fluid bed processing of agglomerating coals 20 p0472 A78-43420

Evaluation of a commercial-scale hydrocarbonization process to produce clean char, oil, and pipeline gas from coal 20 p0506 A78-50154

Oil shale - Power source and raw material 20 p0507 A78-50252

CARBONYL COMPOUNDS
Possible selective solar photothermal absorber - Ni dendrites formed on Al surfaces by the CVD of Ni₂CO/4 18 p0221 A78-30302

Coal desulfurization
[NASA-CASE-NPO-14272-1] 20 p0611 N78-33164

CARGO
Measurement and simulation of fuel consumption in rail freight service 18 p0258 N78-18545

Code of practice for the petroleum industry. Part 1: The handling, storage, and distribution of petroleum products
[SABS-089-1977-PT-1] 19 p0402 N78-24366

CARGO AIRCRAFT
Energy and economic impacts of projected freight transportation improvements 18 p0257 N78-18537

CARGO SHIPS
Speed polar of a wind turbine powered cargo boat 17 p0094 A78-18094

CARRIER MOBILITY
Analysis of epitaxial drift field M on P silicon solar cells 17 p0012 A78-10904

Diffusion length measurement by a simple photoresponse technique --- for MIS and Schottky barrier solar cells 17 p0026 A78-11050

A note on the performance of a Si solar cell under partial illumination 19 p0371 A78-42119

CATALYSIS
Catalysis and unconventional energy systems 18 p0183 A78-25055

Early coal hydrogenation catalysis 19 p0337 A78-38403

Kinetics of thermal liquefaction of Belle Ayr subbituminous coal 19 p0365 A78-41221

Kinetics of catalytic liquefaction of Big Horn coal in a segmented bed reactor 19 p0365 A78-41222

Process variable effects in the conversion of methanol to gasoline in a fluid bed reactor 19 p0365 A78-41223

Catalytic synthesis of hydrocarbons from carbon monoxide and hydrogen 20 p0530 A78-53328

Fuel cells: Applied research fuel cell materials and electrocatalysis
[BNL-50652] 19 p0447 N78-26597

CATALYSTS
Hydrogenation of phenanthrene over a commercial cobalt molybdenum sulfide catalyst under severe reaction conditions --- hydrocarbon fuel from coal liquefaction 18 p0190 A78-26580

New materials for coal liquefaction --- catalysts 18 p0190 A78-26581

New concepts and results concerning the mechanism of carbon monoxide hydrogenation. I - Organic oxygen compounds produced during medium-pressure synthesis with iron catalysts. II - Evolution of reaction steps on the basis of detailed product composition and other data 19 p0337 A78-38404

Presulfiding coal liquid hydrodesulfurization catalysts 20 p0470 A78-43408

Hydrogen from fossil fuels 20 p0534 A78-53456

Performance and emissions of a catalytic reactor with propane, diesel, and Jet A fuels
[NASA-TM-73786] 17 p0148 N78-14177

The conversion of model coal liquids compounds to Naphtha species
[PB-275891/0] 18 p0272 N78-20291

Experimental evaluation of fuel preparation systems for an automotive gas turbine catalytic combustor
[NASA-TM-78856] 19 p0387 N78-22243

Surface structure and mechanisms of gasification catalyst deactivation
[FE-2229-5] 19 p0398 N78-23589

Methanation activity of Raney nickel catalysts: Effect of proportion of NiAl₃ and Ni₂Al₃ in precursor alloys
[PB-279656/3] 20 p0557 N78-29198

Hydrodesulfurization and liquefaction of a bituminous coal in a batch autoclave with particulate and monolith catalysts 20 p0560 N78-29564

Catalytic combustion for the automotive gas turbine engine 20 p0572 N78-30333

Development of catalysts for exhaust emission control 20 p0574 N78-30372

Methanation catalysts: Activity, adsorption and degradation studies of nickel and nickel bimetallic catalysts for methanation 20 p0611 N78-33161

Catalyst sintering studies --- phosphoric acid¹ fuel cells
[EPRI-EM-661] 20 p0620 N78-33577

CATALYTIC ACTIVITY

Deactivation and attrition of Co-Mo catalyst during B-Coal operations --- coal gasification and liquefaction 18 p0190 A78-26582

Catalytic liquefaction of coal 18 p0191 A78-26583

Deactivation of hydrosulfurization catalysts under coal liquids. I - Loss of hydrogenation activity due to carbonaceous deposits 18 p0203 A78-27919

Deactivation of hydrosulfurization catalysts under coal liquids. II - Loss of hydrogenation activity due to adsorption of metallics 18 p0203 A78-27920

Catalytic and structural properties of the enzyme hydrogenase and its role in biophotolysis of water --- for hydrogen fuel production 18 p0207 A78-28354

Catalytic gasification of coal with high-pressure steam 18 p0227 A78-31497

Effects of coal minerals on the hydrogenation, desulfurization, and solvent extraction of coal 18 p0229 A78-31870

Catalyzed combustion in a flat plate boundary layer. I - Experimental measurements and comparison with numerical calculations [LBL-6841] 18 p0230 A78-31953

Compact gas generator for fuel gasification aboard motor vehicles 18 p0236 A78-32509

Development studies on selected conversion of synthesis gas from coal to high octane gasoline [FE-2276-20] 19 p0454 A78-27289

Evaluation of sulfur-tolerant catalytic processes for producing peak-shaving alcohol fuels [EPRI-AP-687] 20 p0558 A78-29263

Effect of inlet temperature on the performance of a catalytic reactor --- air pollution control [NASA-TM-78977] 20 p0592 A78-31534

Catalytic conversion of solvent refined coal to liquid products [LBL-6807] 20 p0612 A78-33258

CATHODES

Cathode spots on metallic electrodes under the conditions of the channel of an MHD generator 17 p0002 A78-10243

Investigation of the thermionic emission of some advanced cathode materials 19 p0328 A78-36563

On the discharge mechanism of silver/alkylammonium polyiodide solid state cells 19 p0363 A78-40621

Near-cathode region of contracted discharge at MHD-generator metallic electrodes 20 p0486 A78-45655

High energy density pelletized aluminum chloride thermal batteries. Part 2: Cathode screening [AD-A043659] 17 p0120 A78-11502

Improved cathodes for phosphoric acid fuel cells --- catalysts [EPRI-EM-505] 19 p0423 A78-25578

CATTLE

Biological conversion of biomass to methane [COO-2917-6] 20 p0553 A78-28648

CAVITIES

High-temperature linear radiation-cavity solar collector with a Fresnel concentrator [AD-A049982] 18 p0276 A78-20628

CAVITY RESONATORS

Proposed high-power microwave source using a superconducting cavity as an energy storage [IPPJ-T-30] 18 p0240 A78-16436

CDC 6600 COMPUTER

STAEAC: Solar Thermal Electric Annual Energy Calculator documentation [SAND-77-8278] 19 p0447 A78-26588

CEILINGS (ARCHITECTURE)

Lightweight thermal storage for solar heated buildings 17 p0083 A78-16832

CELL CATHODES

Primary Li/SOCl₂ cells. IV - Cathode reaction profiles 20 p0515 A78-52193

CELLULOSE

Utilization of waste cellulose for production of chemical feedstocks via acid hydrolysis --- Conversion to glucose 17 p0035 A78-11129

Enzymes show promise for biomass conversion 19 p0327 A78-36443

Conversion of cellulosic and waste polymer material to gasoline [COO-2982-21] 20 p0612 A78-33257

CEMENTS

Applications of thermal energy storage in the cement industry [NASA-CR-159399] 20 p0615 A78-33537

CENSUS

Fuels and energy data: United States by states and census divisions, 1974 [PB-271093/7] 17 p0124 A78-12245

CENTRAL PROCESSING UNITS

Preliminary design review package for the solar heating and cooling central data processing system [NASA-CR-150594] 18 p0274 A78-20604

CENTRIFUGAL COMPRESSORS

A research on centrifugal compressor for small gas turbine - The effect of recirculating flow --- automobile engines 20 p0509 A78-50612

Study of the potential for improving the economics of hydrogen liquefaction through the use of centrifugal compressors and the addition of a heavy water plant [NASA-CR-145282] 17 p0159 A78-15564

Design study for high-pressure high-flow oxygen centrifugal compressor, phase 1 [NTI-77TR17] 19 p0417 A78-25439

CENTRIFUGAL PUMPS

Calculations and in situ experimental data on a water pumping system directly connected to an 1/2 Kw photovoltaic converters array 20 p0527 A78-52890

Rocketdyne's advanced coal slurry pumping program 17 p0133 A78-13266

CERAMIC COATINGS

The possibility of black zinc oxide as spectrally selective coating for low temperature solar collectors 20 p0491 A78-46196

CERAMICS

Ceramic microstructures '76: With emphasis on energy related applications; Proceedings of the Sixth International Materials Symposium, University of California, Berkeley, Calif., August 24-27, 1976 17 p0088 A78-17451

MHD electrode-insulator micro- and macro-structure 17 p0088 A78-17464

High-temperature ceramics for automobile gas turbines [DGLR PAPER 77-073] 17 p0096 A78-18708

Development of a ceramic receiver for a Brayton cycle solar electric power plant 18 p0165 A78-20624

Vehicular gas turbine with ceramic recuperative heat exchanger 19 p0311 A78-34486

High temperature heat pipes for terrestrial applications [AIAA 78-435] 19 p0318 A78-35615

Oxide ceramics for electrodes on open-cycle MHD generators 19 p0328 A78-36556

[SAND-77-1658] 19 p0448 N78-26604
- COEFFICIENT OF FRICTION**
Friction and wear of several compressor gas-path
seal movements
[NASA-TP-1128] 17 p0158 N78-15229
- COEFFICIENTS**
Effectiveness of spectrally selective surfaces for
exposed, high-temperature solar absorbers
[SAND-77-8300] 19 p0444 N78-26563
- COKE**
The role of solvent in the solvent refined coal
process
18 p0190 A78-26577
- COLD FLOW TESTS**
Cold flow mixing rate data for pulverized coal
reactors
19 p0328 A78-36616
Development work for an advanced coal gasification
system for electric power generation from coal
directed toward a commercial gasification
generating plant, phase 2. Volume 12:
Cold-flow model testing of a two-stage
entrained-flow slagging coal gasifier
[FE-1521-31] 19 p0426 N78-25601
- COLD TRAPS**
Variable-temperature cryogenic trap for the
separation of gas mixtures
20 p0533 A78-53425
- COLD WATER**
Hydrodynamic loads on the cold water pipe --- for
Ocean Thermal Energy Conversion application
19 p0303 A78-33326
Cold water transport, cold water pipe, and deep
water mooring line analysis - A parametric
approach --- for Ocean Thermal Energy Conversion
19 p0303 A78-33327
- COLLISIONAL PLASMAS**
Study of a collisional plasma rotating between two
cylinders
19 p0293 A78-32718
Shear stabilization of collisional drift instability
19 p0369 A78-42022
Kinetic theory of plasma in the limiter-shadow
region
19 p0378 A78-42212
Beta-dependence of the particle and energy
confinement times in the low collisionality
regime in toroidal systems
20 p0491 A78-46185
- COLLISIONLESS PLASMAS**
Diffusive losses and scaling law for large tokamaks
20 p0515 A78-52149
- COLLOIDS**
Research in the electrofluid dynamic /EPD/ wind
driven generator
20 p0503 A78-49949
- COLOR**
The application of color response data of silicon
cells for improving photovoltaic efficiency
17 p0055 A78-11341
- COLORADO**
Colorado energy impact assistance plan
[PB-276587/3] 19 p0390 N78-22483
Legal and institutional perspectives on solar
energy in Colorado. A case study of land use
and energy decision-making
[PB-279994/8] 20 p0586 N78-30710
- COLUMBIA RIVER BASIN (ID-OR-WA)**
Wind energy - A supplement to hydro-electric
energy using the Columbia River Valley as an
example
17 p0052 A78-11317
- COMBUSTIBLE FLOW**
Analysis of the seeded combustion gas boundary
layer near a cold electrode
17 p0083 A78-16814
Collection of ions by electric probes in
combustion MHD plasmas - An overview
18 p0188 A78-26111
Catalyzed combustion in a flat plate boundary
layer. I - Experimental measurements and
comparison with numerical calculations
[LBL-6841] 18 p0230 A78-31953
- COMBUSTION**
Clean coal combustion through coal washing and
blending
[PB-274406/8] 18 p0260 N78-18560
Proceedings of the 2d Stationary Source Combustion
Symposium. Volume 5: Addendum
[PB-274897/8] 18 p0261 N78-18590
Regenerative process for desulfurization of high
temperature combustion and fuel gases
[BNL-50706] 19 p0427 N78-25610
Assessment of advanced technology for direct
combustion of coal
[HCF/T1216-0001] 19 p0446 N78-26578
Project acquisition and evaluation process for
atmospheric fluidized bed combustion
demonstration plant
[FE-2343-1] 19 p0459 N78-27550
- COMBUSTION CHAMBERS**
Some results of investigations on the U-25 pilot
plant to attain its design parameters --- MHD
generator operation
17 p0066 A78-13153
Influence of combustion chamber geometry on toxic
compound emissions
17 p0067 A78-13169
Pollutant measurements in laboratory pulverized
coal combustor and gasifier
17 p0081 A78-16348
Gas turbines. Part 2 - Aerodynamic processes,
regenerators, combustion chambers, and
construction /2nd revised and enlarged edition/
--- Russian book
18 p0219 A78-30200

CONCENTRATION (COMPOSITION)

Preliminary evaluation of sulfur variability in low-sulfur coals from selected mines [PE-275000/8] 18 p0261 A78-18566

CONCENTRATORS

Novel versions of the compound parabolic concentrator for photovoltaic power generation 17 p0023 A78-11024

Progress report on a 1-kW terrestrial array of AlGaAs/GaAs concentrator solar cells 17 p0023 A78-11025

An analytic evaluation of the flux density due to sunlight reflected from a flat mirror having a polygonal boundary 17 p0053 A78-11328

Fixed mirror/distributed focus solar thermal electric power systems development 17 p0053 A78-11331

Characteristics of solar cells designed for concentrator systems 17 p0054 A78-11337

An analytical and experimental investigation of a 1.8 by 3.7 meter Fresnel lens solar concentrator 17 p0059 A78-11373

Design, construction and test of a collector system using a linear asymmetric Fresnel reflector 17 p0059 A78-11374

Optical analysis of the Fixed Mirror/Distributed Focus /FMDP/ solar energy collector 17 p0059 A78-11377

Non-evacuated solar collectors with compound parabolic concentrators 17 p0059 A78-11378

Long-term average performance predictions for compound parabolic concentrator solar collectors 17 p0059 A78-11379

Optimization of a fixed solar thermal energy collector 17 p0059 A78-11380

Optical properties of cylindrical elliptic concentrators 17 p0060 A78-11382

The compound trapezoidal collector /an optimized stationary concentrator/ 17 p0060 A78-11383

Analytical and experimental study of total internal reflection prismatic panels for solar energy concentrators 17 p0060 A78-11389

Analysis and classification of methods for calculating concentrating systems --- for solar energy collection 17 p0064 A78-12386

Concentration by conical and cylindrical concentrators of radiation scattered by near-solar regions of the sky 17 p0064 A78-12387

Prospects for using Fresnel lenses for concentrating systems of solar energy equipment 17 p0064 A78-12388

Collection properties of generalized light concentrators 17 p0080 A78-16093

Performance characteristics of concentrator-augmented Savonius wind rotors 17 p0094 A78-18092

Asymmetrical non-imaging cylindrical solar concentrators 17 p0104 A78-19831

Choice of the optimal parabolocylindrical concentrator with a tubiform receiver 17 p0107 A78-20424

WVU wind energy concentrators 18 p0171 A78-22244

The development and use of the moire method in solar engineering problems 18 p0187 A78-25731

A paraboloid-toroidal conical concentrator as a secondary concentrator of solar energy 18 p0187 A78-25732

A comparative analysis of models describing the formation of irradiance fields in wide-aperture optical systems 18 p0187 A78-25733

Equalizing an irradiance field on the surface of a receiver 18 p0187 A78-25734

Estimating the deformation process in the formation of the reflecting surface of solar concentrators 18 p0187 A78-25735

Solar furnaces 18 p0200 A78-27861

Engineering estimate of the quality of facets obtained by a deformation method of form giving --- mirrors for solar collectors 18 p0214 A78-28890

Photoelectric radiation-density meter --- for concentrator focal region measurement 18 p0215 A78-28892

Study of physicochemical processes in fabrication of reflectors from polymer materials --- coat bond in foam-film solar concentrator 18 p0215 A78-28895

Experimental evaluation of a fixed collector employing vee-trough concentrator and vacuum tube receivers 19 p0295 A78-33030

Collection times for trough-type concentrators having arbitrary orientation 19 p0323 A78-35797

General principles of calculating multielement concentrating systems --- solar collectors 19 p0326 A78-36136

A device with a sectioned photodetector and a laser transmitter for determining the precision characteristics of solar energy concentrators 19 p0326 A78-36137

Truncated 'focones' and 'foclines' --- for solar concentrators 19 p0331 A78-36858

Analysis and classification of concentrating-system design methods --- for solar energy collection 19 p0331 A78-36863

Focone and focline concentration of radiation scattered by circumsolar parts of the sky 19 p0331 A78-36864

Prospect for using Fresnel lenses for the concentrating systems of solar installations 19 p0331 A78-36865

Ideal flux concentrators with reflector gaps --- solar collectors 19 p0333 A78-37177

Thermal deformations of solar concentrators 19 p0335 A78-37945

Flat-sided rectilinear trough as a solar concentrator - An analytical study 19 p0344 A78-39636

Non-tracking solar concentration for solar cell 19 p0371 A78-42111

A non-tracking heat concentrator capable of giving concentration factor of the order of 20 19 p0371 A78-42112

Design of a non-tracking solar heat concentrator/collector system 19 p0371 A78-42113

Design of a non-tracking concentrator which will distribute sunlight in a uniform manner over a flat receiving surface 19 p0371 A78-42114

Power increase from solar cells under pyramidal-horn type concentrator 19 p0372 A78-42125

Performance characteristics of a solar battery concentrator system using Si and CdS cells 19 p0372 A78-42126

Environmental challenges of the President's energy plan: Implications for research and development
[GPO-96-834] 20 p0593 N78-31543
NASA authorization, 1979, volume 1, part 3
[GPO-25-291] 20 p0611 N78-32926
- CONICAL BODIES**
Solar concentrating properties of truncated hexagonal, pyramidal and circular cones
20 p0491 A78-46444
Generation of thermonuclear neutrons by laser action on a conical target
20 p0501 A78-49669
- CONNECTORS**
Improved mesh interconnector technology for the Meteosat solar array
17 p0016 A78-10957
Advanced interconnect for use with ultrasonic seam welding on solar cells
17 p0016 A78-10958
- A novel solar cell interconnection design
17 p0017 A78-10959
- CONSERVATION**
Energy requirements of alternatives in water supply, use, and conservation, and water quality control in California
[UCRL-13784] 19 p0460 N78-27559
Integrated Inventories of Renewable Natural Resources
[PB-281036/4] 20 p0609 N78-32589
- CONSTRAINTS**
Sensitivity theory for general nonlinear algebraic equations with constraints
[ORNL/TN-5815] 17 p0118 N78-10814
An algorithm for constrained optimization with semismooth functions
[IIASA-RR-77-3] 17 p0121 N78-11511
- CONSTRUCTION**
Method of construction of a multi-cell solar array
[NASA-CASE-MFS-23540-1] 18 p0249 N78-17468
Management of social and economic impacts associated with the construction of large-scale projects: Experiences from the Western coal development communities
[BNWL-RAP-16] 19 p0468 N78-27975
Collation of monthly and semiannual reports covering instrumentation at the Decade 80 house in Tucson, Arizona
[NASA-CR-150728] 20 p0549 N78-28609
Model code for energy conservation in new building construction
[SAM/1230-1] 20 p0585 N78-30704
Minimum Energy Dwelling (MED) workbook: An investigation of techniques and materials for energy conscious design
[SAM-1198-1] 20 p0617 N78-33553
- CONSTRUCTION MATERIALS**
Construction physics for solar houses
17 p0071 A78-14094
Heat pipe materials unique requirements for coal gasification processes
17 p0085 A78-16902
Materials for hydrogen service
20 p0535 A78-53462
Lightweight building materials for the storage of solar energy
[PB-275684/9] 18 p0273 N78-20380
Alternate materials of construction for geothermal applications
[BNL-50751] 20 p0564 N78-29611
Survey and analysis of selected topics within the Energy Research and Development Administration's (ERDA) materials research and development programs
[DOE/ET-0006] 20 p0589 N78-31170
- CONTACT RESISTANCE**
The role of macrorelief of semiconductor branches during their commutation in thermoelements --- semiconductor-metal contacts for thermoelectric solar batteries
18 p0187 A78-25736
Frequency limitations of transferred electron devices related to quality of contacts
19 p0334 A78-37468
On the role of macrorelief of semiconductor branches during their commutation in thermoelements --- semiconductor-metal contacts for thermoelectric solar batteries
20 p0489 A78-46124
Determination of contact thermal resistances --- for solar thermoelectric generators
20 p0495 A78-48406
- CONTAINERS**
Hydraulic container pipelining - A future transportation system to conserve energy
17 p0030 A78-11091
Crash testing of nuclear fuel shipping containers
[SAND-77-1462] 20 p0542 N78-28467
- CONTAMINANTS**
Surface and impurity studies in ORMAK and ISX --- tokamaks
19 p0378 A78-42210
Time-variable air pollutant emission strategies for individual power plants
[EPRI-EA-818] 17 p0146 N78-13645
Character and transformation of pollutants from major fossil fuel energy sources

DATA BASES

SUBJECT INDEX

- Subsystem design package for Mod 2 site data acquisition system: Solar heating and cooling [NASA-CR-150588] 18 p0274 N78-20609
- Geothermal environmental studies, Heber region, Imperial Valley, California. Environmental baseline data acquisition [EPRI-ER-352] 18 p0286 N78-21630
- Solar energy development and implementation --- Atmospheric Sciences Research Center network 20 p0544 N78-28532
- System integration of marketable subsystems [NASA-CR-150742] 20 p0581 N78-30654
- DATA BASES**
- Hourly direct-normal solar radiation data tapes for the United States 17 p0049 A78-11288
- A pilot system for the Texas energy data bank and information retrieval system 17 p0118 N78-10957
- Decision making with interactive access to integrated administrative and technological data bases. An illustrated conceptual overview --- energy storage [UCRL-80353] 18 p0290 N78-21986
- Environmental assessment of high-BTU gasification [PB-278175/5] 19 p0450 N78-26646
- Data bank for the geographical allocation of future US energy supply facilities by county [BNL-50754] 19 p0463 N78-27590
- Data-base management system for spatial display of federal offshore oil and gas lease data [LA-UR-77-2779] 19 p0467 N78-27791
- Management of Data Elements in Information Processing [PB-279661/3] 20 p0566 N78-29784
- Data for design of a hydrogen engine: A progress report 20 p0571 N78-30324
- Federal Energy Data System (FEDS): Statistical summary [DOE/EIA-0031/2] 20 p0606 N78-32564
- DATA COLLECTION PLATFORMS**
- Thermal surveillance of active volcanoes using the LANDSAT-1 data collection system. Part 5: Electronic thermal sensor and data collection platform technology [E78-10124] 19 p0394 N78-23500
- DATA CORRELATION**
- Synthetic hydrodynamics [COO-0056-4] 18 p0273 N78-20473
- DATA MANAGEMENT**
- Interactive data management and analysis system for the Eastern Gas Shale Program [MLM-2469(OP)] 19 p0401 N78-23988
- Management of Data Elements in Information Processing [PB-279661/3] 20 p0566 N78-29784
- DATA PROCESSING**
- Processing the results of experiments on the U-25 unit by means of an information measuring system --- MHD generator 17 p0002 A78-10246
- Remote sensing - A burgeoning science --- Canadian programs 17 p0063 A78-12214
- Central Data Processing System (CDPS) user's manual: Solar heating and cooling program [NASA-CR-150580] 18 p0283 N78-21595
- Interactive data management and analysis system for the Eastern Gas Shale Program [MLM-2469(OP)] 19 p0401 N78-23988
- Department of energy's consolidation of information processing activities needs more attention [PB-281269/1] 20 p0626 N78-33996
- DATA RECORDING**
- Tar sand evaluation using geophysical well logs 19 p0368 A78-41819
- DATA REDUCTION**
- Solar power satellite system definition study. Part 2, volume 6: Evaluation data book [NASA-CR-151670] 18 p0271 N78-20160
- DATA RETRIEVAL**
- Summary report of availability of geothermal data for potential direct heat application in Nevada [NVC/0671-1] 20 p0584 N78-30693
- DATA SMOOTHING**
- An algorithm for constrained optimization with semismooth functions [ITASA-RR-77-3] 17 p0121 N78-11511
- DATA SYSTEMS**
- Information system for transportation energy 18 p0194 A78-27545
- Performance evaluation of wind energy conversion systems using the method of bins: Current status [SAND-77-1375] 20 p0597 N78-31580
- DATA TRANSMISSION**
- Supervisory and transmission system for the control of atmospheric pollution in areas surrounding thermoelectric plants 17 p0065 A78-12936
- DECISION MAKING**
- An approach to decision modeling for an ignition test reactor --- The Next Step Tokamak design 19 p0346 A78-39797
- Information and data flows in societal problem areas: Focus-energy [PB-269497/4] 17 p0118 N78-10965
- Decision making with interactive access to integrated administrative and technological data bases. An illustrated conceptual overview --- energy storage [UCRL-80353] 18 p0290 N78-21986
- Energy policy and strategy for rural development, part 1 [GPO-94-275] 19 p0397 N78-23569
- Energy policy and strategy for rural development, part 2 [GPO-97-394] 19 p0397 N78-23570
- Development of a unified criterion for solar collector selection --- for decision making 19 p0402 N78-24237
- Venture analysis case study of combined gas and steam power systems for the generation of utility electric power [APAE-2483-5] 19 p0416 N78-25337
- A dynamic energy optimization model under uncertainty --- natural gas models and decision making 19 p0456 N78-27516
- Solar energy incentives analysis: Psycho-economic factors affecting the decision making of consumers and the technology delivery system [HCP/M2534] 19 p0463 N78-27584
- Concepts and techniques for evaluation of energy-related water problems [PB-279608/4] 20 p0565 N78-29619
- A study of characteristics of intercity transportation systems. Phase 1: Definition of transportation comparison methodology [NASA-CR-152153-1] 20 p0566 N78-29995
- Institutional applications of solar total energy systems [ALO-3786-2] 20 p0619 N78-33569
- DECOMPOSITION**
- An ionic model for the systematic selection of chemical decomposition reactions for energy storage 17 p0051 A78-11307
- Thermochemical water decomposition --- hydrogen separation for energy applications 20 p0534 A78-53455
- DECONTAMINATION**
- Kinetics of chemical processes involved in the decontamination of seawater with respect to oil hydrocarbons 18 p0193 A78-26818
- Factors that influence the leaching of organic material from in situ spent shale 20 p0505 A78-50142
- DEEP SPACE NETWORK**
- Energy consumption program: A computer model simulating energy loads in buildings 20 p0541 N78-28132
- DEEPWATER TERMINALS**
- Anchor systems --- for offshore power plants 19 p0303 A78-33328
- DEFENSE INDUSTRY**
- DOD/ERDA terrestrial photovoltaic systems demonstration program 17 p0022 A78-11016
- DEGASSING**
- Clean fuels from coal - Finding the right combination 17 p0065 A78-12604

DEGRADATION

Investigations of the effects of shear degradation on the rheological behavior of ultra-high molecular weight water soluble polymers as applied to enhance oil recovery

18 p0237 N78-16171

Photon degradation effects in terrestrial solar cells

[NASA-TN-78924] 19 p0421 N78-25551

DEHYDRATION

Design and performance of an air collector for industrial crop dehydration

17 p0104 A78-19828

Research on the application of solar energy to industrial drying or dehydration processes

[ORO-5123-1] 20 p0621 N78-33583

DEHYDROGENATION

Solar-thermochemical production of hydrogen from water

[LA-OR-78-1052] 20 p0621 N78-33586

DELAWARE

The petroleum industry in the Delaware estuary

[PB-277962/7] 19 p0451 N78-26653

DELPHI METHOD (FORECASTING)

Outline for a hydrogen economy in 1985-2000

17 p0100 A78-18848

DELTA

LANDSAT satellite mapping in Egypt and its possible applications in petroleum and natural gas exploration

[E78-10168] 20 p0547 N78-28573

DEMAND (ECONOMICS)

Energy supply-demand integrations to the year 2000: Global and national studies --- Book

18 p0165 A78-20618

Development of a flow-model for energies and products

18 p0187 A78-25946

Demand sensitive energy storage in molten salts

18 p0220 A78-30264

Energy - A review and survey

20 p0493 A78-46872

The Pacific area energy supply/demand outlook - The next fifteen years versus now

20 p0506 A78-50155

Demand for gasoline

17 p0110 N78-10551

Project Independence Evaluation System (PIES) documentation. Volume 18: A users guide

[PB-268850/5] 17 p0116 N78-10599

Transportation in America's future: Potentials for the next half century. Part 2. Transportation forecasts

[PB-270468/2] 17 p0129 N78-12909

Application of near-term fossil technologies to the energy supply/demand profiles of the U.S. states and regions

[PB-2442-1] 17 p0155 N78-14679

A study of the energy consequences of alternative transport policies in intercity freight markets

18 p0258 N78-18547

Data needs in transportation energy conservation research

18 p0259 N78-18554

An overview of US energy options: Supply- and demand-side history and prospects

[NASA-CR-155946] 18 p0264 N78-19610

Energy demand modeling and forecasting

[PB-274336/7] 18 p0270 N78-19676

Energy supply and environmental impacts: Conventional energy sources

[PB-276410/8] 18 p0289 N78-21669

The determinants of the demand for residual fuel oil in the U.S. east coast market, 1960-1976 --- Venezuelan exports

[AD-A051131] 19 p0403 N78-24372

Forecasting and modeling time-of-day and seasonal electricity demands

[EPRI-EA-578-SR] 19 p0425 N78-25598

Analysis of policy options for accelerating commercialization of solar heating and cooling systems

[TID-27597] 19 p0428 N78-25615

Methodology for predicting the demand for new electricity using goods

[EPRI-EA-593] 19 p0445 N78-26570

Integrating policy analysis: Study module 7. Volume 2: Technical appendix

[PB-280037/3] 20 p0598 N78-31587

DEMAND 77: EPRI annual energy forecasts and consumption model. Volume 1: Forecasts and general description of the model

[EPRI-EA-621-SR-VOL-1] 20 p0606 N78-32563

Energy supply and demand modeling. A bibliography with abstracts

[NTIS/PS-78/0599/7] 20 p0609 N78-32586

Commercial demand for energy: A disaggregated approach

[ORNL/COH-15] 20 p0619 N78-33570

DENDRITIC CRYSTALS

Fabrication and characterization of solar cells using dendritic silicon thin films grown on alumina ceramic

17 p0013 A78-10916

Possible selective solar photothermal absorber - Ni dendrites formed on Al surfaces by the CVD of Ni /CO/4

18 p0221 A78-30302

Dendritic web silicon for solar cell application

20 p0535 A78-53489

DENITROGENATION

Catalytic hydroprocessing of shale oil to produce distillate fuels

[CONV-770814-9] 19 p0423 N78-25579

DENMARK

Solar heat systems for use at high latitudes

20 p0545 N78-28534

DENSE FLASHES

Neutral particle emission of the pulsator plasma during high-density discharges --- in tokamaks

19 p0379 A78-42216

Sequences of neutron and X-ray flashes during a long-lasting current in a plasma focus device

19 p0381 A78-42265

DENSITY (MASS/VOLUME)

Models for calculating density and vapor pressure of geothermal brines

18 p0206 A78-28249

Borehole gravity survey to determine density variations in the Devonian shale sequence of Lincoln County

[NERC/CR-77/7] 17 p0157 N78-14729

Cryogenic fluids density reference system: Provisional accuracy statement

[PB-275450/5] 18 p0272 N78-20376

Measurement of the flow properties and capillary pressure relationships of certain coals pertaining to underground coal gasification

[COO-4129-3] 19 p0410 N78-24680

DENSITY DISTRIBUTION

Numerical computation of the density profile produced by 10.6-micron irradiation of an SiO2 microballoon

20 p0538 A78-53685

DENSITY MEASUREMENT

Cryogenic fluids density reference system: Provisional accuracy statement

[PB-275450/5] 18 p0272 N78-20376

DEPOSITION

Particulate deposition in direct fired MHD air preheaters

[ASME PAPER 77-HT-65] 17 p0090 A78-17497

DEPRESSION

LANDSAT satellite mapping in Egypt and its possible applications in petroleum and natural gas exploration

[E78-10168] 20 p0547 N78-28573

DESALINIZATION

Solar energy prospects in Saudi Arabia

19 p0345 A78-39671

The application of wind energy systems to desalination

[PB-276174/0] 18 p0285 N78-21620

Solar desalination: Status and potential

20 p0545 N78-28544

Energy-quality calculations for freshwater chemical potential

20 p0596 N78-31566

DESERTS

Hydroelectric solar energy conversion

19 p0368 A78-41813

Solar energy conversion: An analysis of impacts on desert ecosystems

[COO-4339-1] 19 p0427 N78-25612

LANDSAT satellite mapping in Egypt and its possible applications in petroleum and natural gas exploration

[E78-10168] 20 p0547 N78-28573

DESICCANTS

- A solar powered desiccant air conditioning system
17 p0046 A78-11245

DESIGN ANALYSIS

Energy and remote sensing --- satellite exploration, monitoring, siting 17 p0075 A78-14805
The world balance between energy needs and resources by the year 2000. II - Evolution and regional aspects of the problem 17 p0094 A78-18096
Energy resources of the developing countries and some priority markets for the use of solar energy 18 p0179 A78-24400
The risks of energy shortage in the world level 18 p0196 A78-27783
Remote sensing of earth resources. Volume 5 - Annual Remote Sensing of Earth Resources Conference, 5th, Tullahoma, Tenn., March 29-31, 1976, Technical Papers 18 p0198 A78-27823
Chances for exotics - Regenerable energy sources --- wind, geothermal and bioresources 20 p0507 A78-50251
Carbonate rock - A resource for energy --- carbon dioxide source for hydrocarbon production 20 p0511 A78-51343
Wind power resources and methods for evaluating them 20 p0516 A78-52252
The role of remote sensing for energy development 20 p0533 A78-53383
Domestic energy resource and reserve estimates: Uses, limitations, and needed data [PB-268966/9] 17 p0115 N78-10590
Energy from the west: A progress report of a technology assessment of western energy resource development. Volume 1: Summary report [PB-271752/8] 17 p0144 N78-13616
Energy from the west: A progress report of a technology assessment of western energy resource development. Volume 2: Detailed analysis and supporting materials [PB-271753/6] 17 p0144 N78-13617
Energy from the west: A progress report of a technology assessment of western energy resource development. Volume 3: Preliminary policy analysis [PB-271754/4] 17 p0144 N78-13618
Energy from the west: A progress report of a technology assessment of western energy resource development. Volume 4: Appendices [PB-272243/7] 17 p0144 N78-13619
Translations on USSR resources, no. 768 [JPRS-70524] 17 p0159 N78-15557
Three-region world dynamics of fossil/hydrogen energy system 18 p0239 N78-16427
Annotated bibliography of natural resource information: Northwestern New Mexico [PB-276024/7] 18 p0273 N78-20597
Alaska natural resource issues [GPO-95-110] 19 p0404 N78-24601
Carbonaceous shales of Indiana as sources of energy, petrochemicals, and ceramic materials [TID-28179] 19 p0418 N78-25518

- Solar energy and limits to the energy on the earth
20 p0545 N78-28535
- Implementation of Public Law 95-87
[GPO-28-863] 20 p0556 N78-28990
- Integrated Inventories of Renewable Natural Resources
[PB-281036/4] 20 p0609 N78-32589
- Optical characteristics of the earth's surface and atmosphere from the point of view of the remote sensing of natural resources: Review of the contemporary status of the problem
[NASA-TN-75548] 20 p0625 N78-33642
- EARTH RESOURCES PROGRAM**
- International Scientific-Technological Conference on Space, 17th, Rome, Italy, March 25, 26, 1977, Proceedings --- and scientific satellites for earth resources monitoring; solar and alternate energy sources
17 p0065 A78-12876
- Industrial use of geological remote sensing from space
17 p0075 A78-14787
- Remote sensing of strippable coal reserves and mine inventory in part of the Warrior Coal Field in Alabama
[NASA-CR-150781] 20 p0603 N78-32520
- EARTH SURFACE**
- Buried impact craters in the Williston Basin and adjacent area --- as possible oil field sites
20 p0480 A78-44047
- Principles of the mathematical modeling of the energy structure of solar radiation regimes
20 p0495 A78-48408
- Onsite control of sedimentation utilizing the modified block-cut method of surface mining
[PB-272244/5] 17 p0159 N78-15552
- Optical characteristics of the earth's surface and atmosphere from the point of view of the remote sensing of natural resources: Review of the contemporary status of the problem
[NASA-TN-75548] 20 p0625 N78-33642
- ECOLOGY**
- What does it concern --- technological information dissemination and social response
18 p0218 A78-29873
- Energy analysis, energy quality, and environment
20 p0481 A78-44122
- Analysis of brine disposal in the Gulf of Mexico.
3: Capline sector
[PB-271292/5] 17 p0146 N78-13648
- The petroleum industry in the Delaware estuary
[PB-277962/7] 19 p0451 N78-26653
- ECONOMETRICS**
- Forecasting and modeling time-of-day and seasonal electricity demands
[EPRI-BA-578-SR] 19 p0425 N78-25598
- A review of energy models with particular reference to employment and manpower analysis
[PB-279447/7] 20 p0566 N78-29989
- Integrating policy analysis: Study module 7.
Volume 2: Technical appendix
[PB-280037/3] 20 p0598 N78-31587
- ECONOMIC ANALYSIS**
- Economic and commercial assessment of solar energy conversion; Proceedings of the Conference, London, England, July 5, 1977
17 p0004 A78-10614
- The economic evaluation of solar energy schemes
17 p0004 A78-10615
- Economic considerations in the energy supply of Antarctic dwellings
17 p0005 A78-10621

SUBJECT INDEX

ENERGY SOURCES CONTD

Pipeline gas from solid wastes by the Syngas recycling process 18 p0197 A78-27805

Fuels and chemicals from crops 18 p0197 A78-27808

Geothermal energy utilization --- Book 18 p0198 A78-27824

Solar energy engineering --- Book 18 p0199 A78-27852

Solar irradiance, total and spectral --- data for cost-effective solar energy conversion 18 p0199 A78-27853

Solar energy availability prediction from climatological data 18 p0199 A78-27854

Hydrogen production by marine photosynthetic organisms as a potential energy resource 18 p0207 A78-28353

Winds and wind system performance --- Book 18 p0231 A78-32074

Operational sea state and design wave criteria - State-of-the-art of available data for U.S.A. coasts and the equatorial latitudes --- Ocean Thermal Energy Conversion platform design 19 p0302 A78-33322

Magma - A potential source of fuels 19 p0311 A78-34398

Hydrogen as an energy carrier: Production, storage, transport --- German book 19 p0315 A78-35179

Waste pyrolysis - Alternative fuel source 19 p0333 A78-37172

Solar architecture; Proceedings of the Aspen Energy Forum, Aspen, Colo., May 27-29, 1977 19 p0336 A78-38051

Is solar power more dangerous than nuclear 19 p0341 A78-38998

The potential for geothermal and solar thermal power systems 19 p0361 A78-40368

California's geothermal resource potential 19 p0368 A78-41816

National Solar Energy Convention, Jadavpur University, Calcutta, India, November 29-December 1, 1976, Proceedings 19 p0369 A78-42101

Solar energy for use as a source of power 19 p0370 A78-42104

Spectral distribution of global solar radiation at Poona 19 p0370 A78-42106

Some data collected by experiments to be utilised for solar energy application 19 p0370 A78-42107

Radiation measurements for solar energy utilization 19 p0370 A78-42109

Energy resources --- on natural and nuclear energy technology and efficiency 19 p0385 A78-43072

Air flow in the central valley of Maui, Hawaii --- windpower generation potential 19 p0386 A78-43287

A baseline of logistic and power requirements for full-scale manufacturing of metallic materials in earth orbit [AAS 77-237] 20 p0475 A78-43881

Energy - A review and survey 20 p0493 A78-46872

Principles and applications of solar energy --- Book 20 p0496 A78-48519

Potential and economics of energy production by bioconversion 20 p0504 A78-50128

Technical and economical feasibility of biomass utilization as energy source in California 20 p0505 A78-50145

Chances for exotics - Regenerable energy sources --- wind, geothermal and bioresources 20 p0507 A78-50251

Carbonate rock - A resource for energy --- carbon dioxide source for hydrocarbon production 20 p0511 A78-51343

Optimization of the operation of a solar energy converter 20 p0511 A78-51396

Photovoltaic Solar Energy Conference, Luxembourg, September 27-30, 1977, Proceedings 20 p0518 A78-52776

The photovoltaic project of the Commission of the European Communities 20 p0522 A78-52816

Aviation futures to the year 2000 20 p0528 A78-52966

Foreseeable energy and mineral resource problems --- remote sensors for resource exploration and management 20 p0532 A78-53377

World energy resources 1985-2020: World energy demand --- Book 20 p0533 A78-53438

energy production: An executive summary
[PNL-2410] 20 p0619 N78-33565
- ENERGY STORAGE**
Terawatt pulse power systems utilizing inductive
storage
17 p0008 A78-10701
Assessment of storage systems - The device utility
interface --- energy technology
17 p0009 A78-10730
Potential role of solar thermal electric power in
the U.S.
17 p0010 A78-10743
The Pedox Flow System for solar photovoltaic
energy storage
17 p0022 A78-11019
Air Storage System Energy Transfer /ASSET/ plants
- A utility's evaluation
17 p0029 A78-11081
- Economic analysis of wind generation and energy
storage for electric utility systems
17 p0031 A78-11100
Superconducting energy storage development for
electric utility systems
17 p0032 A78-11109
Large Tokamak power supplies - A survey of
problems and solutions
17 p0041 A78-11205
Theoretical modeling of an ammonia/water
absorption cycle with solar energy storage
17 p0046 A78-11250
Mass and energy transfer in a hot liquid energy
storage system
17 p0050 A78-11302
Fundamental studies of direct contact latent heat
energy storage
17 p0051 A78-11306
An ionic model for the systematic selection of
chemical decomposition reactions for energy
storage
17 p0051 A78-11307
Wind energy - A supplement to hydro-electric
energy using the Columbia River Valley as an
example
17 p0052 A78-11317
Design options in solar total energy systems
17 p0055 A78-11346
Underground hydroelectric pumped storage - A
practical option
17 p0063 A78-12221
Interaction between collector and consumer ---
storage and use of solar energy
17 p0071 A78-14095
Superconducting magnetic energy storage
17 p0074 A78-14649
Use of transition metal compounds to sensitize a
photochemical energy storage reaction
17 p0083 A78-16830
Fiber-composite systems for energy-storage flywheels
17 p0085 A78-16901
Optimal design of anisotropic /fiber-reinforced/
flywheels --- for energy storage
17 p0092 A78-17789
Exotic power and energy storage
17 p0095 A78-18624
Storage and distribution of large quantities of
hydrogen
17 p0099 A78-18838
The storage of hydrogen in the form of metal
hydrides - An application to thermal engines
17 p0100 A78-18845
Safety in hydrogen transport and storage
installations
17 p0101 A78-18856
Safety aspects of a widespread hydrogen energy
economy
17 p0101 A78-18857
Effects of phase-change energy storage on the
performance of air-based and liquid-based solar
heating systems
17 p0104 A78-19832
A fluidized bed solar reactor - A thermochemical
application
18 p0165 A78-20623
Mechanical energy storage systems - Compressed air
and underground pumped hydro
[AIAA PAPER 78-281] 18 p0166 A78-20788
A self-contained 5,000 kW capacity wind energy
conversion system with storage
18 p0171 A78-22246
Solar house Hoehenkirchen --- heating and hot
water system
18 p0179 A78-24345
Materials problems in large scale production of
hydrogen from water and in hydrogen storage
18 p0183 A78-25056
Effectiveness of using a pulsed Faraday MHD
generator in combination with a thermonuclear
reactor
18 p0194 A78-27140
Photochemical conversion and storage of solar energy
18 p0202 A78-27890
Organic molecular energy storage reactions
18 p0203 A78-27896
Measurements of the behaviour of adsorbent energy
storage beds

- Study of future heat engine vehicle systems
 [UCRL-13781] 19 p0436 A78-26039
- A collection of Stirling engine reports from
 General Motors' research, 1958 to 1970. Part
 1.1: Model 3 ground power units design,
 construction and testing. Government contract
 reports
 [GMR-2690-PT-1.1] 19 p0437 A78-26237
- Stirling engine ground power unit
 [GMR-2690-SECT-1.108] 19 p0437 A78-26245
- Stirling engine Ground Power Unit model GPU 3
 acceptance test report
 [GMR-2690-SECT-1.110] 19 p0437 A78-26247
- US Army Engineer Research and Development
 Laboratories five hundred hour engineering
 evaluation of the Stirling GPU 2-1
 [GMR-2690-SECT-1.112] 19 p0437 A78-26249
- A collection of Stirling engine reports from
 General Motors' research, 1958 to 1970. Part
 1.2: Model 3 ground power units design,
 construction, and testing, General Motors
 research studies
 [GMR-2690-PT-1.2] 19 p0437 A78-26250
- Combustor development for Stirling ground power
 units, GPU-2 and GPU-3
 [GMR-2690-SECT-1.204] 19 p0438 A78-26254
- A collection of Stirling engine reports from
 General Motors' research, 1958 to 1970. Part 2:
 Stirling cycle analysis and engine design studies
 [GMR-2690-PT-2] 19 p0438 A78-26262
- Stirling engine heater tube failures
 [GMR-2690-SECT-3.101] 19 p0438 A78-26285
- Stirling engine heater tube failure
 [GMR-2690-SECT-3.102] 19 p0438 A78-26286
- Examination of Stirling engine regenerator screens
 [GMR-2690-SECT-3.105] 19 p0439 A78-26289

Evaluation of stresses in tubes with external heat flux and internal pressurization
[GMR-2690-SECT-3.204] 19 p0439 N78-26294

A collection of Stirling engine reports from General Motors' research, 1958 to 1970. Part 7: Thermal energy storage and publication list, 7.1 Thermal energy storage, 7.2 List of general motors Stirling engine publications
[GMR-2690-PT-7] 19 p0440 N78-26326

Thermal energy storage Stirling engine power plants 1: Calculated heat transfer and pressure drop across ground power unit heater assemblies
[GMR-2690-SECT-7.104] 19 p0440 N78-26330

Thermal energy storage-Stirling engine powerplants for road vehicles
[GMR-2690-SECT-7.111] 19 p0441 N78-26337

Design approaches to more energy efficient engines
[NASA-TM-78893] 19 p0441 N78-26442

ACEE propulsion overview 19 p0453 N78-27048

Energy efficient engine: Preliminary design and integration studies 19 p0453 N78-27053

Energy efficient engine preliminary design and integration studies 19 p0453 N78-27054

Impact of broad-specification fuels on future jet aircraft --- engine components and performance 19 p0453 N78-27059

Hybrid vehicle technology constraints and application assessment study. Volume 1: Summary
[PB-278118/5] 19 p0464 N78-27596

Hybrid vehicle technology constraints and application assessment study. Volume 2: Sections 1 through 4
[PB-278119/3] 19 p0464 N78-27597

Hybrid vehicle technology constraints and application assessment study. Volume 3: Sections 5 through 9
[PB-278120/1] 19 p0464 N78-27598

Hybrid vehicle technology constraints and application assessment study. Volume 4: Sections 10, 11, and appendix
[PB-278121/9] 19 p0465 N78-27599

Advanced industrial gas turbine technology readiness demonstration program. Phase 1: Design study
[RCP/75035-1] 20 p0542 N78-28468

Summary of variable displacement engine project 20 p0569 N78-30299

Lewis Research Center support of Chrysler upgraded engine program 20 p0569 N78-30305

Data for design of a hydrogen engine: A progress report 20 p0571 N78-30324

Non-petroleum fuels and compatible engines: 1977 BERC up-date report 20 p0571 N78-30326

Solving alcohol fuel problems by engine modification 20 p0572 N78-30330

An update of the direct injected stratified charge rotary engine developments at Curtiss-Wright 20 p0573 N78-30364

Proceedings of the Fourth International Symposium on Automotive Propulsion Systems, volume 2
[NATO/CCMS-61-VOL-2] 20 p0574 N78-30370

Energy efficient engine: Preliminary design and integration studies
[NASA-CR-135444] 20 p0588 N78-31108

Automotive diesel technology program --- computerized design 20 p0590 N78-31436

Initial test results with a single-cylinder rhombic-drive Stirling engine --- to be applied to automobile engine design to conserve energy
[NASA-TM-78919] 20 p0592 N78-31533

Hydrogen-fueled engine
[NASA-CASR-NPO-13763-1] 20 p0614 N78-33526

ENGINE INLETS

Fuel vapourization - Economy with reduced exhaust emission 18 p0221 A78-30366

ENGINE MONITORING INSTRUMENTS

Use of a field bench for testing turbojet engines 20 p0501 A78-49731

ENGINE PARTS

NASA/General Electric Engine Component Improvement Program
[AIAA PAPER 78-929] 20 p0485 A78-45098

Substitution of ceramics for high temperature alloys 20 p0494 A78-47596

Development of ceramic components for an automotive gas turbine 20 p0509 A78-50632

A collection of Stirling engine reports from General Motors' research, 1958 to 1970. Part 1.1: Model 3 ground power units design, construction and testing. Government contract reports
[GMR-2690-PT-1.1] 19 p0437 N78-26237

A collection of Stirling engine reports from General Motors' research, 1958 to 1970. Part 1.2: Model 3 ground power units design, construction, and testing, General Motors research studies
[GMR-2690-PT-1.2] 19 p0437 N78-26250

Effect of diesel fuel on Stirling engine ground power unit components --- fuel system
[GMR-2690-SECT-1.201] 19 p0437 N78-26251

The GPU-3 Stirling engine ground power unit ignition system
[GMR-2690-SECT-1.203] 19 p0438 N78-26253

Combustor development for Stirling ground power units, GPU-2 and GPU-3
[GMR-2690-SECT-1.204] 19 p0438 N78-26254

Impact of broad-specification fuels on future jet aircraft --- engine components and performance 19 p0453 N78-27059

Ceramic technology readiness program
[PE-2664-3] 19 p0454 N78-27279

Study and program plan for improved heavy duty gas turbine engine ceramic component development
[NASA-CR-135230] 20 p0542 N78-28466

Long-term CF6 engine performance deterioration: Evaluation of engine S/N 451-380
[NASA-CR-159390] 20 p0557 N78-29103

Improved heavy duty gas turbine engine 20 p0572 N78-30340

ENGINE STARTERS

Manual cranking tests of the Stirling engine ground power unit
[GMR-2690-SECT-1.202] 19 p0437 N78-26252

ENGINE TESTING LABORATORIES

General aviation energy-conservation research programs at NASA-Lewis Research Center
[NASA-TM-73884] 18 p0247 N78-17060

ENGINE TESTS

Tutorial, test measurement accuracy --- for gas turbine engine performance 17 p0088 A78-17409

Gas turbine module performance analysis
[SAE PAPER 770992] 18 p0176 A78-23828

Use of methanol in diesel engine - An experimental study of engine performance 18 p0199 A78-27827

Investigation of some factors affecting the performance of an alcohol-diesel oil dual fuel engine 18 p0199 A78-27829

Some characteristics of oil consumption measured by hydrogen fueled engine
[ASIE PREPRINT 77-LC-5B-1] 18 p0209 A78-28434

Experimental and theoretical analysis of Wankel engine performance
[SAE PAPER 780416] 19 p0308 A78-33388

Methanol-gasoline blends - Performance and emissions 19 p0321 A78-35702

Use of a field bench for testing turbojet engines 20 p0501 A78-49731

Variability of emissions measurements on a small gas turbine engine 20 p0507 A78-50569

A study on a premixed combustor for a vehicular gas turbine 20 p0508 A78-50592

Effect of fuel properties on performance of single aircraft turbojet combustor at simulated idle, cruise, and takeoff conditions
[NASA-TM-73780] 17 p0129 N78-13056

Experimental and analytical comparisons of the performance and combustion characteristics of gasoline, methane, and methanol in a Wankel engine 17 p0158 N78-15487

- Experiments with novel fuels for diesel engines
[BERC/TPR-77/8] 19 p0436 N78-26225
- A collection of Stirling engine reports from General Motors' research, 1958 to 1970. Part 1.1: Model 3 ground power units design, construction and testing. Government contract reports

SUBJECT INDEX

ENVIRONMENTAL TESTS

- Environmental monitoring at major US Energy Research and Development Administration contractor sites: Calendar year 1976, volume 2 [ERDA-77-104/2-VOL-2] 19 p0466 N78-27636
- Prospects for open-cycle MHD plants [CONF-771102-20] 20 p0582 N78-30673
- Hydrothermal energy systems FY 1977: Environmental Development Plan (EDP) [EDP/G-01(77)] 20 p0585 N78-30702
- ## ENVIRONMENTAL QUALITY
- The environment today --- reviewing protection legislation and research 20 p0484 A78-45076
- Considerations on some economic and environmental problems related to energy production, part 1 [ISS-L-76/15-PT-1] 20 p0554 N78-28669
- Considerations on some economic and environmental problems related to energy production, part 2 [ISS-L-76/16-PT-2] 20 p0555 N78-28670
- Considerations on some economic and environmental problems related to energy production, part 3 [ISS-L-76/17-PT-3] 20 p0555 N78-28671
- ## ENVIRONMENTAL SURVEYS
- MAP35 - An investigation of atmospheric, energy related pollutants in the northeastern United States 19 p0366 A78-41284
- Integrated environmental analysis and the development of new energy technologies [BNL-22676] 17 p0117 N78-10614
- Strategic petroleum reserve: Supplement to final environmental impact statement for bayou choctaw salt dome [PB-270435/1] 17 p0119 N78-11254
- Strategic petroleum reserve: Central Rock Mine [PB-270447/6] 17 p0119 N78-11255
- Strategic petroleum reserve: Byron Mound salt dome, draft supplement [PB-270108/4] 17 p0119 N78-11256
- Compilation of air pollutant emission factors, supplement no. 7 [PB-270281/9] 17 p0122 N78-11541
- Cumulative production/consumption effects of the crude oil price incentive rulemakings [PB-271319/6] 17 p0124 N78-12247
- Solar program assessment: Environmental factors. Photovoltaics [ERDA-77-47/3] 17 p0142 N78-13593
- Pathways of trace elements in the environment [CONF-770210-3] 17 p0146 N78-13644
- Assessment in industrial hazardous waste management petroleum re-refining industry [PB-272267/6] 17 p0157 N78-14951
- Energy conservation and the environment [PB-272428/4] 17 p0162 N78-15590
- Hydrocarbon pollutants from stationary sources [PB-272784/0] 17 p0163 N78-15605
- Literature survey of emissions associated with emerging energy technologies [PB-272550/5] 17 p0163 N78-15606
- Environmental assessment of waste-to-energy processes: Source assessment document [PB-272646/1] 17 p0163 N78-15956
- Strategic petroleum reserve [PB-273487/9] 18 p0237 N78-16198
- An examination of small wind electric systems in Michigan 18 p0239 N78-16428
- A hypothetical 1000 MW(e) photovoltaic solar-electric plant [PB-273108/1] 18 p0243 N78-16468
- Advanced fossil fuel and the environment: An executive report [PB-274541/2] 18 p0261 N78-18587
- Enhanced oil recovery potential in the United States [PB-276594/9] 19 p0388 N78-22452
- Strategic petroleum reserve. Texoma group salt domes. Draft environmental impact statement. Volume 1: West Hackberry expansion, Black Bayou, Vinton, Big Hill [FEA/S-77/323-VOL-1] 19 p0390 N78-22487
- Strategic petroleum reserve. Texoma group salt domes. Draft environmental impact statement. Volume 2, appendices A and B: West Hackberry expansion, Black Bayou, Vinton, Big Hill [FEA/S-77/323-VOL-2] 19 p0391 N78-22488
- Strategic petroleum reserve. Texoma group salt domes. Draft environmental impact statement. Volume 4, appendices D-S: West Hackberry expansion, Black Bayou, Vinton, Big Hill [FEA/S-77/323-VOL-4] 19 p0391 N78-22490
- Environmental, health, and control aspects of coal conversion: An information overview, volume 2 [ORNL/EIS-95-VOL-2] 19 p0411 N78-24697
- Alternative fuels demonstration program, volume 1 of 2 [ERDA-1547-VOL-1] 19 p0415 N78-25245
- Solar total energy; large scale experiment. Phase 2: Fort Hood, Texas [TID-18040] 19 p0429 N78-25630
- Pollution and environmental aspects of fuel conversion. A bibliography with abstracts [NTIS/PS-78/0314] 19 p0434 N78-25701
- Energy from biomass: An overview of environmental aspects [CONF-780109-3] 19 p0446 N78-26585
- Community leaders workshop on solar energy assessment [RLO/2230/T5-1] 19 p0446 N78-26586
- Environmental assessment of high-BTU gasification [PB-278175/5] 19 p0450 N78-26646
- Task reports: Slurry coal pipelines, volume 2, part 1 --- environmental impact [PB-278676/2] 19 p0465 N78-27603
- Task reports: Slurry coal pipelines, volume 2, part 2 --- environmental impact [PB-278677/0] 19 p0465 N78-27604
- Standards support and environmental impact statement. Volume 2: Promulgated standards of performance for lignite-fired steam generators [PB-279008/7] 19 p0466 N78-27621
- Control of emissions from Lurgi coal gasification plants [PB-279012/9] 19 p0466 N78-27623
- Air quality analysis of the Southern California Bight in relation to potential impact of offshore oil and gas development [PB-279088/9] 19 p0467 N78-27665
- Low- and medium-Btu gasification systems: Technology overview [PB-279641/5] 20 p0559 N78-29275
- Studies of air pollution effects on vegetation [UCID-17714] 20 p0565 N78-29634
- Impact of increased coal consumption in the Pacific Northwest [BNWL-RAP-21] 20 p0586 N78-30717
- Environmental control strategies for coal-fired plants: A comparative evaluation [CONF-7710101-6] 20 p0586 N78-30719
- Long-term economic and environmental consequences [BNL-22735] 20 p0587 N78-30722
- Alternative fuels demonstration program [ERDA-1547-VOL-2] 20 p0601 N78-32282
- Benefits derived from the outer continental shelf environmental studies program are questionable [PB-281782/3] 20 p0614 N78-33520
- ## ENVIRONMENTAL TESTS
- Corrosion behavior of type 310 stainless steel in coal-gasification environments 20 p0512 A78-51713
- Real-time and accelerated outdoor endurance testing of solar cells 20 p0524 A78-52837
- Terrestrial solar array experiments performed by Space Department, RAE Farnborough 20 p0524 A78-52838
- Environmental and endurance tests for space application of low cost solar cells made of terrestrial silicon base material 20 p0524 A78-52841
- Thermal performance of MSFC hot air collectors under natural and simulated conditions [NASA-CR-150506] 18 p0256 N78-18525
- Geothermal environmental studies, Heber region, Imperial Valley, California. Environmental baseline data acquisition [EPRI-ER-352] 18 p0286 N78-21630
- General-purpose heat source project, space nuclear safety program, and radioisotopic terrestrial safety program --- plutonium oxide radioisotopic power systems [LA-7184-PR] 19 p0467 N78-27898

- The 40 kW of solar cell modules for the large scale production task a low cost silicon solar array project
[NASA-CR-157348] 20 p0548 N78-28602
- ENZYME ACTIVITY**
Catalytic and structural properties of the enzyme hydrogenase and its role in biophotolysis of water --- for hydrogen fuel production 18 p0207 A78-28354
Use of an enzymic electric cell and immobilized hydrogenase in the study of the biophotolysis of water to produce hydrogen 18 p0207 A78-28355
Enzymes show promise for biomass conversion 19 p0327 A78-36443
Physiological studies of nitrogen fixation by blue-green algae 17 p0128 N78-12647
- EPITAXY**
Analysis of epitaxial drift field N on P silicon solar cells 17 p0012 A78-10904
The role of defects on the performance of epitaxial and diffused solar cells fabricated on EFG 'ribbon' silicon --- edge-defined growth process technology 17 p0012 A78-10905
Vapor-phase-epitaxial growth, processing and performance of AlAs-GaAs heterojunction solar cells 17 p0026 A78-11055
Molecular-beam epitaxy in space 17 p0103 A78-19472
Epitaxial silicon solar cells with uniformly doped layer 18 p0228 A78-31732
Organometallic-sourced VPE AlGaAs/GaAs concentrator solar cells having conversion efficiencies of 19% 20 p0473 A78-43706
Graded band-gap pAl_x/Ga_{1-x}/As-nGaAs heterojunction solar cells prepared by molecular beam epitaxy 20 p0516 A78-52625
The limitations imposed by grain boundaries on the performance of epitaxially deposited polycrystalline silicon solar cells 20 p0519 A78-52790
Gallium arsenide solar cells for use with concentrated sunlight 20 p0521 A78-52811
A new approach for developing solar photovoltaic cells 20 p0527 A78-52887
Epitaxial silicon solar cells on 'ribbon' substrates 20 p0536 A78-53490
LPE growth of GaAs-Ga_{1-x}/Al_x/As solar cells 20 p0536 A78-53495
Vapor-phase-epitaxial growth of n-AlAs/p-GaAs solar cells 20 p0536 A78-53496
The current status of the preparation of single crystals, bicrystals, and epitaxial layers of p-InP and of polycrystalline p-InP films for photovoltaic applications 20 p0537 A78-53498
GaAs solar cell development 17 p0138 N78-13544
- EPOXY COMPOUNDS**
Dielectric breakdown of liquid and vapor helium in bulk and across epoxy insulation 19 p0357 A78-40047
- EPOXY RESINS**
Fiber-composite systems for energy-storage flywheels 17 p0085 A78-16901
- EQUATIONS OF STATE**
Steady-state composition profiles in mixed molten salt battery and fuel cell analogs, [CONF-771109-67] 20 p0583 N78-30686
- EQUILIBRIUM EQUATIONS**
Comparative numerical studies of ideal magnetohydrodynamic instabilities 20 p0493 A78-46873
- EQUIPMENT SPECIFICATIONS**
Qualification of European high efficiency solar cells for future ESA satellites 17 p0014 A78-10936
Heat pipe materials unique requirements for coal gasification processes 17 p0085 A78-16902
- Design data brochure: SIMS prototype system 3 [NASA-CR-150707] 19 p0421 N78-25552
Installation package for Sunpak solar collectors [NASA-CR-150802] 20 p0615 N78-33528
- EQUIVALENT CIRCUITS**
Analysis of various field programming to produce the RPP configuration --- Reversed Field Pinch 17 p0039 A78-11174
Experimental determination of series resistance of p-n junction diodes and solar cells 18 p0228 A78-31731
Two-dimensional analysis of diagonal MHD generator via equivalent circuit 19 p0293 A78-32833
Analysis of end effects in diagonal type MHD generator by means of equivalent circuit 19 p0327 A78-36320
- EROSION**
Development of coatings for corrosion/erosion protection of internal components of coal gasification vessels [FE-2592-4] 20 p0548 N78-28591
Hot corrosion/erosion testing of materials for applications for advanced power conversion systems using coal-derived fuels. Task 2. Evaluation of turbine materials for use in a coal-fired fluidized bed combustion environment [FE-2326-20] 20 p0611 N78-33210
- ERROR ANALYSIS**
Tutorial, test measurement accuracy --- for gas turbine engine performance 17 p0088 A78-17409
A correction procedure for separating direct and diffuse insolation on a horizontal surface 17 p0105 A78-19839
Low cost test procedure for solar collectors [ASME PAPER 77-WA/SOL-4] 19 p0299 A78-33192
- ERROR CORRECTING DEVICES**
Techniques for the determination of ohmic drop in half-cells and full cells - A review 17 p0095 A78-18408
- ESA SATELLITES**
Qualification of European high efficiency solar cells for future ESA satellites 17 p0014 A78-10936
- ESTIMATES**
Domestic energy resource and reserve estimates: Uses, limitations, and needed data [PB-268966/9] 17 p0115 N78-10590
- ESTIMATING**
Energy embodied in goods [ORAU/IEA (M)-77-6] 17 p0127 N78-12542
- ETCHING**
New developments in vertical-junction solar cells --- groove structure to promote radiation resistance 17 p0012 A78-10907
Textured surface cell performance characteristics 17 p0019 A78-10996
Developments in vertical-junction silicon solar cells 17 p0137 N78-13540
- ETHERS**
Occupational exposure to refined petroleum solvents. Criteria for a recommended standard [DHEW/PUB/NIOSH-77/192] 19 p0412 N78-24790
- ETHYL ALCOHOL**
The use of ethanol-gasoline mixtures for automotive fuel 17 p0034 A78-11128
Enzymes show promise for biomass conversion 19 p0327 A78-36443
Energy balance for ethyl alcohol production from crops 20 p0498 A78-49000
Recent progress in automotive alcohol fuel application 20 p0576 N78-30391
- ETHYLENE**
Conversion of cattle feedlot manure to ethylene and ammonia synthesis gas [PB-280189/2] 20 p0602 N78-32291
- EUROPE**
A European energy policy - Distant mirage or tomorrow's reality 18 p0195 A78-27777
Sulphur emissions in Europe 19 p0366 A78-41267

- Status of European thermochemical hydrogen programs
[LA-UR-77-2985] 19 p0446 N78-26583
- Critical survey of test procedures for automotive
emissions --- U.S. and European standards and
certification 20 p0574 N78-30374
- EUROPEAN COMMUNICATIONS SATELLITE**
- Study of satellite communications system serving
off-shore oil and gas exploitation activities in
European sea areas, volume 1 --- forecasting
offshore structures and requirements based on ECS
[CWJ1/C-640003-VOL-1] 17 p0134 N78-13308
- Study of satellite communications system serving
off-shore oil and gas exploitation activities in
European sea areas, volume 2 --- transmission
system analysis [CWJ1/C-640003-VOL-2] 17 p0134 N78-13309
- Study of satellite communications system serving
off-shore oil and gas exploitation activities in
European sea areas, volume 3 [CWJ1/C-640003-VOL-3] 17 p0134 N78-13310
- Study of satellite communications system serving
off-shore oil and gas exploitation activities in
European sea areas, volume 4 [CWJ1/C-640003-VOL-4] 17 p0134 N78-13311
- Study of satellite communications system serving
off-shore oil and gas exploitation activities in
European sea areas. Volume 5: Summary
[CWJ1/C-640003-VOL-5-SUMM] 17 p0134 N78-13312
- EUROPEAN SPACE PROGRAMS**
- Is Europe's space power technology competitive
20 p0488 A78-45902
- EUROPEAN COMPOUNDS**
- Photooxidation of aromatic hydrocarbons by
Europium(III) salts 20 p0480 A78-44097
- EUTECTICS**
- Properties of some salt hydrates for latent heat
storage 17 p0075 A78-14691
- Demand sensitive energy storage in molten salts
18 p0220 A78-30264
- Eutectic mixtures for solar heat storage
20 p0487 A78-45742
- Physical properties data compilations relevant to
energy storage. 1. Molten salts: Eutectic data
--- bibliography [PB-280795/6] 20 p0598 N78-31589
- EVALUATION**
- The quality of NOAA's ocean research and
development program: An evaluation
[PB-277095/6] 18 p0290 N78-21980
- EVAPORATION**
- Evaporated Cds film based heterojunction solar cells
19 p0372 A78-42122
- Heat transfer in wicks of low-temperature heat pipes
20 p0488 A78-45830
- EVAPORATION RATE**
- Tests at the FOS terminal on the lng behavior in
large tanks [DOE-TR-17] 20 p0568 N78-30263
- EVAPORATORS**
- Study of the driving forces of heat and mass
transfer in a nozzle reflux device for heating
air by water 16 p0172 A78-22543
- Compact heat exchangers for sea thermal power plants
19 p0303 A78-33330
